334	"Effect on Visual or Scenic Quality of Surrounding Area" was eliminated in the Level 2 screening, although it remains an Additional Goal within the PEL Study. It is a questionable loss of transparency and analysis to remove criteria in this way without explanation, given the importance of all of the goals named in the study.	To avoid scoring discrepancies, some criteria were dismissed until further into the NEPA process to determine its exact methodology of measurement.	SEALT	PEL Study Team
335	The screening methodology released to the TAC in 2023 did not specify a scoring range of -2 to +2. At the March 7, 2024 Joint Advisory Committee meeting, several agencies and stakeholders flagged this abbreviated range for scoring, and questioned its usefulness.	The scoring system has been reviewed and approved by the DOT&PF Statewide Environmental Office. The PEL study team has received a number of recommendations on scoring methodologies and acknowledges many variations on scoring exist. The PEL study team rescored the alternatives with two additional methodologies and validated that the difference in scoring methodology does not substantially alter the outcome	SEALT	PEL Study Team
336	We understand, and have been repeatedly reminded by DOWL, that the PEL Study is not designed to analyze whether a No Build alternative is the best choice, but rather which of the Build alternatives have merit for consideration by an EIS.	Comment noted.	SEALT	PEL Study Team
337	However, DOWL inexplicably chose to include a No Build alternative in the Level 2 Screening. For this reason, it is fair to critique how the screening criteria were applied to the No Build scenario. At the March 7, 2024 presentation, DOWL reported that the parameters for scoring No Build were different from the parameters for scoring other alternatives. The scoring range of -2 to 0 means that No Build has no chance within the PEL Study process to score in the same range as the Build alternatives that can score -2 to +2, and is handicapped by default going into NEPA.	The No build alternative would not meet the purpose and need. However, the No Build (i.e., No Action) alternative is required to be equally considered among the other alternatives carried forward through the NEPA analysis, and thus was included in the screening table. As noted by the commentor, the PEL Study was not designed to analyze whether the No Build alternative is the best choice.	SEALT	PEL Study Team
338	Scoring a No Build alternative at 0 for criteria such as "Avoid, minimize, and mitigate negative impacts to the environment" is a disingenuous finding. 0 should not be the maximum score for No Build in the Level 2 Screening.	The score of "0" simply means the ranking is neutral for the screening category. Using a numbered score in this case could imply there are impacts generated (adverse or positive).	SEALT	PEL Study Team
339	It has been recommended by numerous advisors to this PEL Study that the criteria considered for screening should be weighted according to their importance. For instance, the impacts to 4(f)/6(f) resources should not be forced into an equivalency with the total right-of-way needed for construction.	The Level 2 scoring applied a weight to impacts to resources within the MWSGR. The impacts to the MSWGR resources were considered more substantial than impacts outside the refuge.	SEALT	PEL Study Team
340	Wetlands, birds, other wildlife, fish, refuge, and human use impacts are not adequately weighted. The weighting of these criteria in alternative selection must be commensurate with their importance to the siting decision due to both to their value to the community and their very significant regulatory protections.	The Level 2 scoring applied a weight to impacts to resources within the MWSGR. The impacts to the MSWGR resources were considered more substantial than impacts outside the refuge.	SEALT	PEL Study Team

341	The scoring for the five Build alternatives had a total range of 5 points, from -2 to +2. The scoring for the No Build alternative had a total range of only 3 points, from -2 to 0. Both ranges are unnecessarily narrow for scoring; this eliminates nuance and hides important details about the severity of impacts for different alternatives.	The scoring system has been reviewed and approved by the DOT&PF Statewide Environmental Office. Weighting categories may introduce a subjective evaluation as different people may find different resources more important. The PEL study team is not aware of an environmental analysis that weights particular categories.	SEALT	PEL Study Team
342	The range of -2 to +2 lumps moderate impacts with severe impacts, blurring the difference between what is truly harmful to the environment and the community and what might be acceptable with appropriate mitigation measures.	Mitigation requirements and measures are not known. Consultation with jurisdictional agencies would be required to understand mitigation, and jurisdictional agencies as they typically determine specific mitigation measures.	SEALT	PEL Study Team
343	Many factors are only rated 0 to -2. If No Build is 0, or 0 impact would be misleading, this leaves only two levels of impact to compare six locations (-1 and -2). For example, the criterion "Avoid, minimize, and mitigate impacts to the environment" scores No Build at 0, and all other alternatives identically at a -2. The Build alternatives would all have negative impacts on the environment, but their impacts differ greatly. It would be more prudent to differentiate between minimal impacts, light impacts, moderate impacts, severe impacts, and a total loss/impact so that the alternatives can be compared accurately. All things considered, constructing a bridge at Sunny Point would be substantially more deleterious to the environment and established uses of the Refuge than constructing a bridge at Salmon Creek, but there is no room within DOWL's current scoring to see that difference.	The score of "0" simply means the ranking is neutral for the screening category. Using a numbered score in this case could imply there are impacts generated (adverse or positive). The Level 2 scoring applied a weight to impacts to resources within the MWSGR. The impacts to the MSWGR resources were considered more substantial than impacts outside the refuge.	SEALT	PEL Study Team
344	In order to reflect the best available information, more granularity should be required in the scoring range. SEALT could support a scoring range of -5 to +5, or a range that uses fractional scores (in 0.25 or 0.50 increments).	The scoring system has been reviewed and approved by the DOT&PF Statewide Environmental Office.	SEALT	PEL Study Team
345	With the possible exception of the Salmon Creek alternative, which may be constructed in such a way as to avoid the most harmful impacts to the Mendenhall Wetlands State Game Refuge and the Marjory and Edgar Huizer Fishing Access Site, all other alternatives are inconsistent with existing approved plans.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
346	Mendenhall Wetlands State Game Refuge Management Plan: The Refuge's Management Plan states that the Refuge was "established by the Alaska Legislature in 1976 to protect natural habitat and game populations, especially waterfowl, as well as to provide recreation." All alternatives crossing through the Refuge are inconsistent with Refuge's Management Plan, which provides guidance on managing the Refuge to achieve this purpose.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
347	USACE Mitigation Plans: The West Sunny Point and East Sunny Point alternatives are inconsistent with the approved USACE mitigation plans, including long-term management plans, in place for the high-functioning estuarine wetland mitigation sites around Sunny Point and on Hendrickson Point.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team

348	2013 CBJ Comprehensive Plan: The alternatives located within the Refuge's boundaries (Mendenhall Peninsula, Sunny Point West, Sunny Point East, and Twin Lakes) are inconsistent with Policy 9.3 of the 2013 CBJ Comprehensive Plan, which states "To preserve as public natural areas those publicly-owned lands and shoreline areas that possess important recreational, scenic, fish and wildlife, and other environmental qualities or are subject to natural hazards."	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
349	2013 CBJ Comprehensive Plan: The Plan notes in Chapter 9 that "Natural, undeveloped areas…are an essential component of the CBJ's community form and identity. They should be maintained and enhanced." The Mendenhall Wetlands State Game Refuge is the largest and most publicly-visible natural area in Juneau. Construction of transportation infrastructure within the Refuge would be inconsistent with Policy 9.3 of the Comprehensive Plan and significantly damage the visual, cultural, and scenic identity of the community.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
350	2013 CBJ Comprehensive Plan:The Plan notes in Chapter 9 that "Natural, undeveloped areas…are an essential component of the CBJ's community form and identity. They should be maintained and enhanced." The Mendenhall Wetlands State Game Refuge is the largest and most publicly-visible natural area in Juneau. Construction of transportation infrastructure within the Refuge would be inconsistent with Policy 9.3 of the Comprehensive Plan and significantly damage the visual, cultural, and scenic identity of the community.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
351	2013 CBJ Comprehensive Plan: As its prior iteration in 2008 established, the 2013 Comprehensive Plan continues to designate the CBJ property (Parcel ID 6D1001040010) on the western lobe of Hendrickson Point as a Conservation Area with public access for the wetlands and beach areas around Hendrickson Point. That CBJ property, and the public access parcel from North Douglas Hwy (Parcel ID 6D0901060110), are maintained by CBJ in conservation status.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
352	2013 CBJ Comprehensive Plan: Disturbance and fragmentation and other impacts caused by road construction and conflicting uses adjacent to this area will greatly reduce its recreational, ecological, and conservation values and severely impact its existing uses.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
353	Lemon Creek Area Plan: The Lemon Creek Area Plan notes that throughout the plan's development, the public identified the Refuge as a key resource of the Lemon Creek area for their habitat needs and their viewsheds (p. 55, Lemon Creek Area Plan). The Plan also outlines that access to the Refuge is limited in the Lemon Creek Area and highlights the need for the development of a coastal trail to provide additional access. Alternatives located at the Sunny Point and Vanderbilt locations are inconsistent with this plan.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team

354	Marjory and Edgar Huizer Fishing Access Site Management Plan: The Marjory and Edgar Huizer Fishing Access Site ("Huizer Site") is managed by SEALT in partnership with ADF&G as an official access point to the Refuge and Falls Creek, primarily for fishing, and secondarily for hunting, recreation, and other customary uses of the Refuge. The Huizer Site is located along the southern edge of the Refuge and the parcel's northeastern shoreline boundary is a part of the greater intertidal estuarine Mendenhall Wetlands complex, and a Salmon Creek alternative would conflict with its Management Plan.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
355	Statutory Warranty Deed for Sunny Point Park #3 Lots 1 & 2: Although it is not a community-level plan, the deed to Sunny Point Park #3 Lot 1 and Sunny Point Park #3 Lot 2 specifically prohibits the use of that property for a second crossing. It states that SEALT "...may not deed the Property to the City and Borough of Juneau or the State of Alaska or any divisions or departments thereof unless and until: "(i) Applicable federal and state procedures for formal site selection of a North Douglas Crossing have been completed, appeal procedures exhausted, and permits issued for an alternative other than a Sunny Point alternative; and "(ii) [SEALT] is able to secure from the government entity to which the Property is deeded, a Conservation Easement which expressly limits development of the Property to those listed in the Plat notes, restrictions, and easements of record. "Reversionary Interest of Seller: If any government entity commences eminent domain proceedings against the Property described above, or any part thereof, the Property in its entirety shall revert to the Seller's ownership automatically and by operation of law." *There are additional consequences written into the deed for a condemnation* *proceeding which can be provided upon request.*	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
356	Additionally, a prior iteration of the second crossing concept was evaluated in a Sheinberg survey. It ranked impacts to the wetlands as the #1 consideration, with cost as the #2 consideration. In the EIS for this project, the review should include how prior iterations of a second crossing considered, ranked, and recommended alternatives.	Comment noted.	SEALT	PEL Study Team
357	The goal of SEALT's Habitat Mapping and Assessment Project is to assess the functions and values of different areas within the Mendenhall Wetlands according to protocols developed for the region. Functional assessments look at what wetlands do and how they contribute to ecosystem functions, from fish and wildlife habitat to hydrology and human use. With a basic understanding of what they represent, SEALT's assessment scores can offer a valuable and timely perspective on tideland areas potentially affected by the crossing alternatives.	Comment noted. The Functional Assessment was not complete at the time of this submittal on February 15, 2024. To ensure accuracy of the assessment, the functions and values scores were incorporated into the Wetland Report on March 13, 2024. The SEALT assessment areas were reviewed apart of the wetland delineation report. For easier incorporation, please share shapefiles.	SEALT	PEL Study Team
358	For this project, SEALT engaged Bosworth Botanical Consulting to assess 18 watershedbased areas (Figure 1) covering the entire refuge via the Wetland Ecosystem Protocol for Alaska - Southeast (WESPAK-SE). WESPAK assesses the "functions and values" of the vegetated portion of tidal wetland areas and key features within them.	The SEALT assessment areas were reviewed apart of the wetland delineation report. For easier incorporation, please share shapefiles.	SEALT	PEL Study Team
359	See table 1: WESPAK-SE Protocol - Functions and Values	Comment noted.	SEALT	PEL Study Team
360	See figure 1: SEALT Habitat Mapping and Assessment Project - Assessment Areas	Comment noted.	SEALT	PEL Study Team

361	Since WESPAK-SE focuses on vegetated areas, SEALT is also using the Nearshore Assessment Tool for Alaska - Southeast (NATAK-SE), a complementary assessment tool covering other aspects of tidelands, including mudflats and shoreline buffer characteristics. Both functional assessment tools were developed and are maintained by SEALT in partnership with the USACE, USFWS, CBJ, SEAKFHP, NOAA, and experienced wetland scientists through Adamus Resource Consulting and Bosworth Botanical Consulting.	Comment noted. The use of an additional functional assessment protocol for the PEL Study will be up to the discretion of DOT&PF and CBJ.	SEALT	PEL Study Team
362	Table 2 below summarizes overall WESPAK-SE functional assessment scores for each area. The scores are normalized (transformed to a 0 to 10 scale) to a dataset from other areas around southeast AK.	Comment noted.	SEALT	PEL Study Team
363	As might be expected in a region of steep-sided fjords where well-developed salt marshes are rare, the Refuge's overall tidal wetland function scores are very high. On the mainland side, some refuge areas are literally "off the charts"; overall scores for the Sunny Point (10.98) and Mendenhall Peninsula (10.17) areas under consideration for a second bridge exceed the range of the model's calibration dataset.	Comment noted.	SEALT	PEL Study Team
364	See Table 2: SEALT's Tidal Wetland Functional Assessment for Crossing Areas	Comment noted.	SEALT	PEL Study Team
365	Scores can also be compared by function or functional group (Table 1). For example, the "Waterbird Feeding Habitat" function is "High" across the board. Other sub-scores such as for Anadromous Fish, Organic Nutrient Export, Public Use, and Wetland Sensitivity are also pertinent to a review of potential crossing impacts.	Comment noted.	SEALT	PEL Study Team
366	While overall scores provide a comprehensive way to compare wetlands, they are subject to a weighting scheme. While the standardized weighting built into the WESPAK protocol was carefully chosen, it can be difficult for an overall score to meet all rating needs. Unweighted sub-scores can be more informative for questions focused on particular functions.	Comment noted.	SEALT	PEL Study Team
367	The Mendenhall Peninsula alignment falls within the SEALT project's West River assessment area, the very large and varied salt marsh west of the Mendenhall River along with its streams, ponds, sloughs and riverbank. Most of that vegetated wetland is not crossed by the alignment, although a fringe of salt marsh at the end of Mendenhall Peninsula would be directly affected by fill. The top-scoring West River wetland area contributes greatly to the habitat richness of mudflats and channels at the rivermouth (and beyond) that would be affected by the Mendenhall crossing.	Comment noted.	SEALT	PEL Study Team
368	At Sunny Point, the very high overall score is directly related to the tidal marsh areas that would be filled and impacted by the two alternatives, including the very extensive salt marsh, stream, and channel complex surrounding Sunny Point and extending across the refuge to the channel near the Douglas shore. Since the scores are "area-less" indicators, a size factor could be applied to characterize overall functional impacts. With total impact area considered as well as scores, the Sunny Point alignment's vegetated wetland functional impacts are clearly the most severe among all proposed crossing alternatives, especially effects on bird habitat and human use.	Comment noted.	SEALT	PEL Study Team

369	WESPAK scores for the smaller tidal marsh areas on the Douglas side of the Mendenhall Peninsula and Sunny Point East and West alignments are also in the “High” range. Large fill pads are proposed to cover the marsh and tideflats at both of these Douglas Island landfall sites, including fill over small anadromous streams and their deltas. The recently ADF&G nominated fish streams on the Douglas side of the MP alignment are not shown on DOWL’s project maps.	DOWL used updated data from the Anadromous Waters Catalog (AWC) to complete the Level 2 scoring. Maps associated with older deliverables, such as memos, predate the AWC update.	SEALT	PEL Study Team
370	Functional assessment scores for vegetated tidelands at the Vanderbilt alignment are also very high (9.99), as might be expected given the salt marsh, stream, and channel complexity there. At Twin Lakes and Salmon Creek, overall vegetated wetland function/value scores decrease relative to other alternative crossing locations while remaining in the High range from a regional perspective.	Comment noted.	SEALT	PEL Study Team
371	The many acres of freshwater wetlands within the fill and alignment footprints on Mendenhall Peninsula and Hendrickson Creek were not covered in SEALT’s tideland assessment, although functional assessments for these areas are available from a previous wetland survey (CBJ 2015) by Bosworth Botanical Consulting.	Comment noted.	SEALT	PEL Study Team
372	The Sunny Point East alternative’s impact quantification for the criterion “Protected lands directly affected through SEALT” includes an estimate of 0.006 acres of SEALT land under the final project design.	The estimation of 0.006 acres of SEALT land is based on the on the residential area with the buffer.	SEALT	PEL Study Team
373	The presentation slides for the JDNC PEL Study Joint Advisory Committee meeting on March 7, 2024, and again at the CBJ Public Works & Facilities Committee on March 11, shows this as 0.0006 acres instead. The Juneau Empire article of March 11, 2024 entitled “Sunny Point route near airport runway gets highest score for second Juneau-Douglas crossing” therefore mistakenly reported that the total impact to SEALT land was 0.0006 acres.	The estimation of 0.006 acres of SEALT land is based on the on the residential area with the buffer.	SEALT	PEL Study Team
374	Although this discrepancy between the scoring tables and the public materials on the scoring is concerning and underscores a lack of quality control within the DOWL work products, what is more alarming is that the acreage provided in either case is not a true accounting of the impact (direct fill or functional).	The estimation of 0.006 acres of SEALT land is based on the on the residential area with the buffer.	SEALT	PEL Study Team
375	This kind of false precision in scoring - taking a measurement to a third or fourth decimal place - lends the appearance of rigor to DOWL’s work where very little seems to exist.	Comment noted.	SEALT	PEL Study Team
376	ADOT&PF and its fellow reviewing agencies at the federal and state levels should be skeptical of any of DOWL’s assertions that cannot be verified easily and immediately by reliable data and qualified analysis.	Comment noted.	SEALT	PEL Study Team
377	In this section, SEALT will review the most deleterious effects of a bridge at different crossing locations. Impacts may not be limited to those included in this section; a full impact analysis would have to be conducted following a functional wetlands assessment of the impact sites.	Comment noted. Also, the Functional Assessment was not complete at the time of this submittal on February 15, 2024. To ensure accuracy of the assessment, the functions and values scores were incorporated into the Wetland Report on March 13, 2024.	SEALT	PEL Study Team
378	See Figure 2: Acreage of Impacts by Alternative	Acknowledged.	SEALT	PEL Study Team

379	See Figure 3: Percentage of Habitat Impacts by Alternative	Acknowledged.	SEALT	PEL Study Team
380	See figure 4: Mendenhall Peninsula Alternative Overlaid on SEALT Habitat Map	Acknowledged.	SEALT	PEL Study Team
381	See Figure 5: Sunny Point East and West Alternatives Overlaid on SEALT Habitat Map	Acknowledged.	SEALT	PEL Study Team
382	see Figure 6: Vanderbilt Alternative Overlaid on SEALT Habitat Map	Acknowledged.	SEALT	PEL Study Team
383	See Figure 7: Twin Lakes Alternative Overlaid on SEALT Habitat Map	Acknowledged.	SEALT	PEL Study Team
384	See Figure 8: Salmon Creek Alternative Overlaid on SEALT Habitat Map	None of the six alternatives evaluated in level 2 screening have been dismissed or promised to move forward into the NEPA phase at this time. The PEL study report will make those recommendations.	SEALT	PEL Study Team
385	All of the alternatives except for Salmon Creek would have direct and functional impacts on the wetland mitigation sites owned by SEALT around the Mendenhall Wetlands State Game Refuge. The type, extent, and severity of impacts would vary depending on the design of the alternative (embankment fill vs. pilings at different locations), the distance between the alternative and the SEALT mitigation site, and the freshwater and saltwater influences that may change as a result of the alternative.	Comment noted.	SEALT	PEL Study Team
386	It is important to note that the SEALT conservation lands around the Refuge were selected because of their immense productivity as wetlands and habitat, and represented a unique selection of special aquatic sites of interest to SEALT, the USACE, and partners at other agencies. The hydrologic and habitat connectivity of these lands, managed together, exemplify the tidal wetlands that make coastal Alaska so important for fish, birds, wildlife, and the communities that rely upon those resources.	Comment noted.	SEALT	PEL Study Team
387	The Sunny Point East alternative would severely impact the SEALT properties called Sunny Point Park #3 Lot 1, Sunny Point Park #3 Lot 2, and two properties on Douglas Island called the Grummett Wetlands and Tract B-3. Direct fill of at least one of these conservation properties would occur if a Sunny Point East alternative is selected. All four of these parcels are mitigation sites that provide compensatory mitigation for unavoidable impacts to aquatic resources in SEALT's service area, including for the Juneau airport's most recent expansion in 2009. These mitigation sites are legally protected, and violations to the terms of their protection are enforceable by the USACE as well as SEALT.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
388	The Sunny Point West alternative would severely impact the SEALT properties called the Honsinger Wetlands, King Easement, Branta Lot 2, Sherry Lot 2, Sherry Lot 3, Hinz II Lot 1B, Sunny Point Park #3 Lot 1, Sunny Point Park #3 Lot 2, and two properties on Douglas Island called the Grummett Wetlands and Tract B-3. Direct fill of at least three of these conservation properties would occur if a Sunny Point West alternative is selected. All ten of these parcels are mitigation sites that provide compensatory mitigation for unavoidable impacts to aquatic resources in SEALT's service area, including the Juneau airport's expansion in 2009. These mitigation sites are legally protected, and violations to the terms of their protection are enforceable by the USACE as well as SEALT.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team

389	The Vanderbilt Alternative would impact the overall function of the wetlands complex, breaking the connection between saltwater and freshwater wetlands along its alignment and creating shading, vegetation loss, and habitat disruption for a variety of key species. SEALT would expect indirect but measurable impacts to the Grummett Wetlands and Tract B-3 on Douglas Island, and to Sunny Point Park #3 Lot 1 and Sunny Point Park #3 Lot 2.	Comment noted.	SEALT	PEL Study Team
390	The Salmon Creek alternative would severely impact the SEALT property on Douglas Island called the Marjory and Edgar Huizer Fishing Access Site. The Huizer Site is managed primarily for fishing access, and also for hunting, bird watching, wildlife viewing, and recreation. It is a protected area, public access point, and scenic viewpoint with stairs, interpretive signs, hunting/fishing regulation signs, and a memorial bench overlooking the Refuge.	None of the six alternatives evaluated in level 2 screening have been dismissed or promised to move forward into the NEPA phase at this time. The PEL study report will make those recommendations.	SEALT	PEL Study Team
391	The Mendenhall Peninsula alternative would severely impact the SEALT properties along the eastern side of Mendenhall Peninsula, including Eagles View Lot 1B, Gandercall Lot 4, Gandercall Lot 3, Great Horned Owl Lot 2, Grey Goose Lot 2, Morning Meadow Lot 3, Morning Meadow Lot 4, Eagles Reach Lot 2, Moon Meadow Lot 2, Lazy G Acres Lot 2, HAKALA Lot 2, and Wigeon Ponds.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
392	SEALT owns the aforementioned conservation properties with the exception of Wigeon Ponds, which is owned by the State of Alaska and under a Deed Restriction held for enforcement by SEALT, which states that the property is conserved "...to permanently protect the natural habitat and game populations in the Mendenhall River watershed and estuarine complex." All of the SEALT lands along the Mendenhall Peninsula are legally protected as mitigation sites, and violations to the terms of their protection are enforceable by the USACE as well as SEALT, and by the State of Alaska for Wigeon Ponds.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
393	All build alternatives impact a portion of the Mendenhall Wetlands Important Bird Area. The choices are therefore between impacting higher and highest bird habitat use sites. Even within this area, you will see below that the crossing alternatives focus on most of the refuge's documented bird concentration areas. This is not surprising since the alternative crossing sites are only located at stream mouths and/or areas of expansive salt marsh. The alternatives also in effect "target" most of the refuge's access trails (Figure 1). These are public or otherwise protected access corridors with trails used by hunters, birders, and hikers; not surprisingly, these are also focused on deltas and expansive marsh.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
394	Even without site-specific bird data, a planning team might easily have predicted that delta and marsh areas would be the most important for bird habitat and human use. If quality planning was done to avoid and minimize damage to key resources and uses, as required by law, one must ask why these alternatives were the only sites evaluated for crossings.	Comment noted.	SEALT	PEL Study Team

395	It has been clear from project conception that the primary regulatory and planning criterion on this project comes from state and federal guidance to avoid and minimize impacts to refuge habitat and uses. It is also clear from previous analyses that the Juneau public considers protecting refuge habitat the key siting criterion (see Sheinberg consultant poll report). The PEL process is therefore fundamentally and deeply flawed.	Comment noted. Public Interest Review is integral to the NEPA process.	SEALT	PEL Study Team
396	The PEL Study's bird habitat ratings are not credible, but more importantly, the array of alternatives only includes higher-impact sites. While it may be more convenient from an engineering standpoint to anchor spans or other elevated structures at stream deltas, or to use designated public access or stream protection corridors, other sites could be explored and evaluated in order to truly minimize impacts. Importantly, neither a PEL Study nor an EIS is intended to consider convenience above impacts to regulated resources.	Comment noted.	SEALT	PEL Study Team
397	The PEL Study process has failed from the start to identify key resources and constraints, share them with the public and project partners, or use them in selecting and evaluating alternatives. Fortunately, bird and habitat data are available for the refuge overall and for specific areas within it, and ratings, weighting, and alignments can be adjusted accordingly.	Comment noted. All publicly available applicable and relevant information would be considered and incorporated as appropriate during a future NEPA process.	SEALT	PEL Study Team
398	The Mendenhall Wetlands State Game Refuge is widely acknowledged to be a key migratory shorebird and waterfowl stopover location in the region (Armstrong et al. 2004). The Alaska Shorebird Conservation Plan highlights the importance of the Mendenhall Wetlands as a "key migratory stopover" and stresses its vulnerability to cumulative impacts. The wetlands host 16 of the state's 17 greatest conservation need shorebird species as well as most of the region's stewardship species. For an overview of wildlife use of the refuge area, we refer DOWL to the refuge management plan and The Mendenhall Wetlands: A Globally Recognized Important Bird Area (Armstrong et al. 2004). The Wetlands received this Important Bird Area designation because its stream mouths, salt marsh, deltas, and mud flats are used for migratory stopover by a significant portion of the global population of a number of species.	Current land use, including protected lands status, will be determined and impacts analyzed in detail for each alternative during the NEPA process.	SEALT	PEL Study Team
399	The wetlands host thousands of Western Sandpipers, Ruddy Turnstones, and Surfbirds at a time, and large numbers of Black-bellied Plovers, Black Turnstones, Greater and Lesser Yellowlegs, Dunlin, Rock Sandpipers (C. p. tschuktschorum), Least, Semipalmated and Pectoral Sandpipers, and Long- and Short-billed Dowitchers. A popular hunting location, the Refuge is used during migration by large numbers of waterfowl, including geese, dabblers, and sea ducks. It also provides winter habitat for hundreds of Mallards and Vancouver Canada Geese as well as American Wigeon, and several shorebird species.	Comment noted.	SEALT	PEL Study Team
400	The following review of bird habitat use for each crossing alternative on the Mendenhall Wetlands draws primarily on the Armstrong et al. 2004 Bird Hotspots study report; we also refer to the Cornell Lab of Ornithology online eBird database and other observations where survey coverage is lacking or incomplete, as well as bird use of similar areas where observations are sparse.	Comment noted.	SEALT	PEL Study Team

401	It is important to understand the strengths and limitations of the Hotspots study. The survey method was very good for waterfowl and shorebirds concentrated at the water's edge at low tide, but was not designed for complete coverage of passerine and raptor species using high marsh, or for dispersed use of exposed low marsh, shorelines and adjacent meadows. Observations were focused on the more accessible and low tide areas and did not include all of Falls Creek, or cover Hendrickson Creek and Hendrickson Point or the south side of the refuge to the west. Coverage was incomplete at other points, such as at Sunny Pt, 5 mile N Douglas, and parts of Twin Lakes.	Comment noted.	SEALT	PEL Study Team
402	For the Hotspots study, sites were visited only during the daytime low tide interval; high tide and high marsh uses were not as completely documented, including year-round and seasonally important bathing, resting, and foraging areas. Other methods are needed for good coverage of other refuge migrants such as Mountain Bluebird, Northern Shrike, and large flocks of American Pipit, Lapland Longspur, and Savannah Sparrow, as well as raptors such as Northern Harrier, Short-eared Owl, Kestrel, and Merlin.	Comment noted.	SEALT	PEL Study Team
403	eBird data also has limitations due to access and birder activity. The eBird database stewarded by the Cornell Laboratory of Ornithology hosts birder checklists submitted to its online database and reviewed by regional coordinators. Birder activity is focused on the rivermouth, East and West Mendenhall River flats, Fish Creek, Mendenhall Peninsula, and the dike trail, but there are limited observations in other Refuge locations as well. In querying eBird for use in our wetland assessments, we found that with a few exceptions, where coverage of both sources is good, eBird data generally agree with the older Hotspots findings, although density of data is of course related to birder activity and access.	Comment noted.	SEALT	PEL Study Team
404	"Hotspots" authors Robert Armstrong, Richard Carstensen, and Mary Willson still reside in Juneau and can provide additional context for and interpretation of the Hotspots report and data if needed. The 2002 and 2003 Mendenhall wetlands bird surveys were contracted by USFWS (Michelle Kissling) for comparison with a survey by USFWS in the 1980s (Cain et al., 1989) and published by the Juneau Audubon Society and Taku Conservation Society. The data for the 18 surveys at 42 sites are available in GIS form, along with additional observations from a variety of sources compiled for the study. Survey data can be referenced to polygons representing surveyed areas covering most of the refuge.	Comment noted.	SEALT	PEL Study Team

405	The Salmon Creek alignment starts at the southern edge of the very extensive Salmon Creek delta, an official ADF&G refuge access point and popular option for near-town duck hunting and birding. Hotspots survey pt s01 covers the Salmon Creek delta and vicinity, with its extensive mussel/barnacle/rockweed beds and mudflats and is noted as one of only four overall “first tier” hotspots on the Mendenhall State Game Refuge. For this analysis, the “bird count” incorporates 18 full surveys at each of the 42 primary survey sites from March 2002 to May 2003 (Armstrong, 2004, p 5). Sites with a sum of seasonal means over 1000 birds were designated as “first tier hotspots.” The Hotspots report highlights the site as an important resting and feeding area for gulls, ducks, and shorebirds, including wintering use, with up to 200 Dunlin observed in winter and spring.	Comment noted.	SEALT	PEL Study Team
406	Salmon Creek is also a top seasonal hotspot fall through spring for dabbling ducks, with about 300 Mallards often observed feeding there. In the fall, it is also a hotspot for gulls due to salmon returns to the nearby DIPAC hatchery; observations include 1000 Shortbilled, 700 Glaucous-winged, 500 Bonaparte’s, and 100 Herring Gulls in August 2003. Returning salmon also bring in over a dozen Bald Eagles at once. Large numbers of sea ducks have also been observed staging in Gastineau Channel and feeding on the deltaedge mussel beds, including 600 Surf and White-winged Scoters off Salmon Creek in May of 2003 (Armstrong, 2004 p 22).	Comment noted.	SEALT	PEL Study Team
407	Within the Salmon Creek alignment on the Douglas side, Falls Creek has formed a delta that is smaller but similar in character to that of Salmon Creek, with a small salt marsh and extensive mudflat and rockweed/barnacle/mussel habitat regularly used by a variety of bird species, including Great Blue Heron, Barrow’s Golden-eye, Green-winged Teal, and Mallard. It also has patches of eelgrass along its eastern edge. Shorebirds, gulls, and waterfowl move between the two deltas at low tide separated by a narrow channel, making it functionally one larger habitat (SEALT 2024).	Comment noted.	SEALT	PEL Study Team
408	Important bird habitat will be affected on both the mainland and Douglas side of the Salmon Creek alignment. Fill, construction, shading, and disturbance would degrade habitat on the center of the Falls Creek delta. The current alignment is shown at the eastern edge of the Salmon Ck delta, which reduces the wetland and intertidal footprint there, although impact to birds, habitat, and human use at the Salmon Creek delta from the crossing structure and approach lanes would remain.	Comment noted.	SEALT	PEL Study Team

409	The Twin Lakes site was visited periodically in the Hotspots study but some portions did not receive the full complement of surveys. Armstrong et al. describe Twin Lakes/Vanderbilt marsh (t02 and t04) as an important feeding and “refuge” area for SEALT Comments - JDNC PEL Study Level 2 Screening 44 Mallards and scaup during duck-hunting season. Up to 100 scaup were observed in the open waters of Twin Lakes and 150 Mallards in nearby Vanderbilt marsh. Trumpeter Swans also use both habitats. The marsh area is regularly used by Great Blue Herons and Redwinged Blackbirds. Less common species such as American Coot, Hooded Mergansers are also regularly seen in the Twin Lakes. Ring-necked Ducks, Canvasbacks, and Ruddy Duck are also seen there (Armstrong, 2004). For its richness of unusual species and use by flocks for resting and foraging, this area is considered a “nearby hotspot” in the Hotspots report (Armstrong et al., 2004, p 34).	Comment noted	SEALT	PEL Study Team
410	The Douglas Island landfall for the Twin Lakes crossing crosses the western third of the Neilson Creek delta, Hotspots survey site e02. Much of the upper delta of Neilson Creek has been filled for use as a heliport, formerly ERA Helicopters, now Northstar Trekking. The remaining low marsh and the stream channels, rockweed/mussel beds, mudflats, and bars provide extensive and varied intertidal habitat. The Neilson Creek area is similar in character to Salmon Creek but somewhat smaller and less enriched by hatchery fish. The Neilson delta area ranks as one of six “second tier hotspots” and as a top “seasonal hotspot” in spring and fall for use by large numbers of waterfowl and gulls, including observations of up to 1000 Surf Scoters , 200 Mallards, and 500 Short-billed Gulls (Armstrong et al. 2004, pp 5, 25). Smaller groups of other species are also common at Neilson Creek, including American Wigeon, Bufflehead, Green-winged Teal, and Northern Shoveler. The Neilson Creek delta could be considered virtually continuous with a similar delta formation to the north outboard of Twin Lakes; the two are separated at low tide by only a narrow channel so can therefore be considered a functional habitat unit.	Comment noted.	SEALT	PEL Study Team

411	The bird concentration area at the extensive Neilson Creek delta, and the fresh water and unusual species at Twin Lakes and Vanderbilt marsh, provide important migratory bird habitat that would be affected by a crossing at this location. The tideflat/delta area along Egan hosts tideflats with some mussel beds used by shorebirds and waterfowl; a large portion of tidelands along the highway would be affected by fill or pilings to create an interchange and the delta hotspot habitat would be reduced, affected by construction, and degraded by disturbance, lighting, predator perches, etc.	Comment noted.	SEALT	PEL Study Team
412	The Vanderbilt alignment crosses a productive and dynamic part of the refuge where glacially-influenced water from Lemon Creek mixes with fresh water from nearby streams and saltwater from Gastineau channel. The Twin and Vanderbilt alignment footprints overlap at the western part of Twin Lakes and at Vanderbilt (or “Pioneer”) marsh, noted SEALT Comments - JDNC PEL Study Level 2 Screening 45 above for use by dabbling ducks and Red-winged Blackbirds. Both are considered “nearby hotspots”, where fresh water aquatic vegetation beds and lack of hunting result in a foraging and resting area for waterfowl, including several less common species such as American Coot, Hooded Merganser, and Trumpeter Swan (Armstrong et al., 2004, p 34).	Comment noted.	SEALT	PEL Study Team
413	The Vanderbilt impact area includes extensive salt marsh on both sides of Egan Expressway, the freshwater wetlands of Vanderbilt (“Pioneer”) marsh, new and old channels and distributaries of Vanderbilt Creek, a distributary channel of Lemon Creek, and a large, tidal “island” on the inner Lemon Creek channel. Isolated, yet in clear view of the highway, this salt marsh and mudflat provides key resting and foraging habitat, acting seasonally as a “refuge within the refuge” for large flocks of geese and wintering shorebirds and shorebirds (SEALT, 2024). One thousand Rock Sandpipers were observed at Vanderbilt estuary (L04) in May 2003 (Armstrong et al., 2004 p 8). Both sides of the channel see some use for duck hunting, and there is a refuge access trail where the alignment reaches the shore of Douglas Island at the 5 Mile Creek delta. On the mainland side, refuge access is complicated by Egan and is particularly difficult for the tidal “island” (SEALT).	Comment noted.	SEALT	PEL Study Team

414	The 5-mile site (e01) did not receive the full series of Hotspot surveys and the area sees little birding activity, so observations are limited. Nearby homeowners have confirmed, however, that the 5-mile to Hendrickson Creek tideflats and channels are consistently used by hundreds of resident and migrant Canada Geese and Mallards for bathing, resting, and access to foraging on the isolated mid-channel salt marsh island; this use was further documented during the SEALT wetland assessment and mapping project (M. Stanley, K. Sorenson, personal communication and SEALT (draft), 2024). Great Blue Heron, flocks of wintering Killdeer, and migrating Sandhill Crane have also been observed at this littledisturbed and out-of-the-way corner of the refuge (L. Lamm, eBird).	Comment noted.	SEALT	PEL Study Team
415	The Vanderbilt alignment would affect a currently isolated fall haven and wintering area for Canada Goose and Mallard. Significant salt marsh habitat would be lost, degraded, and fragmented, including a large and growing Lyngbye sedge area, and the area's function as "refuge within the refuge" would be compromised. Mudflat and delta habitats providing seasonally important waterfowl and shorebird habitat would also be affected by the crossing. The 5-mile Creek refuge access trail and delta are within the fill footprint.	Comment noted.	SEALT	PEL Study Team
416	The Level 2 Screening bird habitat rating of the Sunny Point East alignment is "0" - a serious error. The area surrounding Sunny Point did not receive the full series of Hotspot surveys, but the Hotspots database, eBird, and other observations confirm consistent use by large numbers of Canada Geese (100 to 300), Mallards (up to 500), and other species, including American Wigeon and Trumpeter Swan (Amstrong et al., 2004, eBird (including Hausler, MacDonald, and others)).	The revised scoring considers all of the MWSGR as important bird habitat. The scoring has been revised to reflect impacts to important bird habitat inside the refuge.	SEALT	PEL Study Team
417	The area has a uniquely rich array of habitats, from large expanses of Lyngbye sedge and succulent low marsh to high marsh grasses, streams, sloughs, channels, and ponds. Along with the area south and east of the dike trail, the river mouth, and to a lesser extent Vanderbilt/Lemon area, Sunny Point regularly hosts a large portion of the refuge's winter resident Canada Goose population that nests throughout northern southeast Alaska.	Comment noted.	SEALT	PEL Study Team

418	The channels and sloughs provide migratory stopover habitat for shorebirds, diving ducks, and dabbling ducks. Wet and brackish high marsh along the Sunny Point and Egan-adjacent shoreline, a rare habitat type on the Refuge, attracts concentrated seasonal use by Canada Geese, Wilson's Snipe, and other species. Undisturbed forest/meadow shorelines, and shrubby transitional areas provide additional foraging and cover for nesting and resting. The marsh just beyond Sunny Point, with its ponds, channels, and islands, is a major waterfowl concentration area and nexus for movement between resting and foraging areas during changing tides.	Comment noted.	SEALT	PEL Study Team
419	In contrast, the Douglas side of Sunny Point alignments and their Hendrickson Point landfall were not covered in the Hotspots survey and eBird data there is sparse, but bird habitat importance can be inferred from the available habitat and from use of similar nearby areas. The central portion of the alignment near the tidal divide includes tidal channels, salt marsh and vegetated spoil islands, providing foraging and resting areas for waterfowl and nesting habitat for a variety of species. On the refuge, salt marsh and adjacent uplifted meadows such as these are also used by migrating raptors such as Shorteared Owl, Northern Harrier, Kestrel, and Merlin. Migratory flocks of songbirds such as Snow Bunting, Savannah Sparrow, Lapland Longspur, and American Pipit stop to re-fuel in similarly extensive refuge-heart tidelands just to the west.	Comment noted.	SEALT	PEL Study Team
420	At the landfall on Hendrickson Point, the crossing passes through a narrow band of forest to a long stretch of scrub-shrub and forested wetlands within a large open peatland, parts of which are in protected status (CBJ natural area and SEALT conservation property). The alignment footprint crosses the two small streams running through this partly forested wetland strip. Such wetlands provide habitat for many of the songbirds in the region, particularly Lincoln's Sparrow, Dark-eyed Junco, Wilson's and Orange-crowned Warblers, and Hermit Thrush. Nesting Greater Yellowlegs have been observed in the peatland at Hendrickson Point, a disturbance-sensitive species and uncommon breeder in large, ponded peatlands in the Juneau area (Bosworth, 2015).	Comment noted.	SEALT	PEL Study Team
421	With well-documented and consistent wintering use by hundreds of Vancouver Canada Geese and Mallards and seasonal waterfowl and passerine concentrations, the Sunny Point alignment area is a hotspot of bird activity on the refuge. This alternative would affect a very long stretch of salt marsh, a particularly productive and important habitat for birds and other wildlife on the refuge. The Sunny routes would both bisect the refuge, disrupting movement and foraging for a large portion of a valued and disturbance-sensitive winter resident waterfowl population. Impacts to rare wet high marsh, isolated island, and shoreline-adjacent peatland habitat would also be substantial.	Comment noted.	SEALT	PEL Study Team

422	The Mendenhall Peninsula crossing alignment runs through r05, the Western Mudflats bird hotspot at the rivermouth tideflats just south of the Mendenhall Peninsula, and continues through the adjacent areas r06 and r08. These are noted as 3 of the 4 “first tier hotspots” in the Hotspots study (Amstrong et al., 2004). Designated as “first tier” for their heavy bird use, these represent a broad and continuous swath of important migratory bird habitat across the Mendenhall River mouth from Fritz Cove to the channel entrance at Fish Creek. These survey areas stand out in a data set from 18 low tide surveys across 14 months among the 42 systematic survey areas arrayed across accessible portions of the Mendenhall Wetlands State Game Refuge. The totals, defined as a sum of seasonal means of bird numbers, were over 1000 for each of these potentially affected bird hotspots.	Comment noted.	SEALT	PEL Study Team
423	Clearly, the PEL bird habitat impact rating of “zero” for the proposed Mendenhall Peninsula crossing alternative is grossly in error. Criteria should be corrected and bird habitat impact ratings should be changed. Somehow, potential impacts to the most concentrated and extensive seasonal and year-round migratory bird habitat on the refuge were omitted from the most important piece of the PEL impact quantification and rating matrix, undermining the credibility of the entire ratings process. While impacts could be reduced by high bridge span, impacts to habitat and bird use due to supporting structures and fill will remain.	The revised scoring considers all of the MWSGR as important bird habitat. The scoring has been revised to reflect impacts to important bird habitat inside the refuge.	SEALT	PEL Study Team
424	It is not surprising that the Hotspots authors regard survey site r05, the mouth of Mendenhall River, as the “top hotspot” and “probably among the most important feeding habitat for ducks and shorebirds” on the Mendenhall wetlands, citing observations of thousands of Western Sandpipers and hundreds of Surfbirds, Ruddy Turnstones, Semipalmated Sandpipers, and Dunlin. The rivermouth habitat includes sand, mud, barnacle/mussel/rockweed beds, algal mat, and a mix of fresh, glacial, and marine waters (Armstrong, 2004, p 17) The authors also counted large flocks of waterfowl at the rivermouth: 800 Northern Shovelers, 350 Mallards , and 300 American Wigeon. In addition, they note that the area is known as the best place to find less common and highconservation- concern shorebird species, including American and Pacific Golden-Plover, Whimbrel, Red Knot, Baird’s Sandpiper, and Hudsonian, Bar-tailed, and Marbled Godwits.	Comment noted.	SEALT	PEL Study Team
425	The adjacent Fritz Cove hotspot, r06, is also highlighted in the Hotspots report as an important feeding and staging area for sea ducks and waterbirds, noting seasonal concentrations of up to 3-4,000 surf and 600 white-winged scoters and observations of many other species, including sea ducks (Bufflehead, Barrow’s and Common Goldeneye, scaup, Long-tailed Duck), Marbled Murrelet, Horned and Red-necked Grebes, and Redbreasted Mergansers (Armstrong, 2004, p 18). Birds in this area move up the river at high tide, so it has a “floating boundary.”	Comment noted.	SEALT	PEL Study Team
426	To the west and south, at r08 (western mudflats), the largest seasonal means were during the winter, with additional heavy use by a wide variety of species in spring and fall. Bald Eagles (up to 80 observed), gulls, crows, and ravens feed here on burrowing Pacific Sand Lance. R08 is also noted as a top hotspot for the summer and fall seasons (Armstrong, 2004, pp 8-9, 19).	Comment noted.	SEALT	PEL Study Team

427	To the south, the Mendenhall Peninsula alignment transits near the outer portions of the Fish Creek estuary (f08) and through the Western Channel (f09), both noted as “second tier” hotspots of bird activity. The outer Fish Creek estuary hosted a sum of seasonal means just under 1000 (so virtually “top tier”), including heavy migration and winter use, similar and on par with the Western Mudflats just to the north. Similar to the Mendenhall River mouth, the channel and bars west of entrance point (f09) also hosted large numbers during spring and winter (Armstrong et al., 2004, p 6 & 7).	Comment noted.	SEALT	PEL Study Team
428	On the approach to north Douglas, the alignment also passes through the center of survey area f06, noted as a “top winter season hotspot” with heavy use by dabbling ducks (Armstrong et al., 2004, p 6). Large flocks of waterfowl are observed in this area seasonally, including 500 American Wigeon and over a hundred Mallard recently observed resting and feeding on the shoreline, tidal flats and shallows near the 9 mile refuge access trail. Grebes, loons, and thousands of scoters have been recorded here and further offshore along Entrance Point and in Fritz Cove. (eBird and R. Carstensen, personal comm., fall 2023)	Comment noted.	SEALT	PEL Study Team
429	Canada Geese present the largest bird strike hazard to aircraft of any bird species in the Juneau area. The habitat for Canada Geese on the Refuge has shifted with development pressures from the airport expansion and Bicknell construction near Honsinger Pond. Further reductions or constrictions to habitat for these large birds by construction of a second bridge at Mendenhall Peninsula, Sunny Point East, Sunny Point West, or Vanderbilt could present new aviation hazards for the Juneau airport as birds are forced into concentrations, startled into flight by light/noise/vibration/visual stimuli, and have less maneuverability to avoid aircraft strikes.	Comment noted.	SEALT	PEL Study Team
430	Unless we missed a notation in the Level 2 impact quantification that shows their calculations demonstrating otherwise, DOWL attributed “impervious surfaces added” to the Juneau terminus, not the full Douglas terminus, of each alternative. This is most evident when DOWL asserts the differences between Sunny Point West and Sunny Point East, but only account for some impervious surfaces added to the Juneau terminus.	The quantities for criteria Impervious Surfaces Added includes the entire footprint including the Juneau and Douglas terminus of each alternative.	SEALT	PEL Study Team
431	Both Sunny Point West and Sunny Point East would add a tremendous area of impervious surface across Hendrickson Point, which is a radial wetland lobe and arguably a 4(f) resource due to its status as a CBJ Conservation Area, but that end of the fill is not counted in DOWL's acreage for that criterion (or others). The preliminary information available from DOWL for the Douglas terminus for Sunny Point West and Sunny Point East indicates 100% fill once the abutment reaches Hendrickson Point.	The quantities for criteria Impervious Surfaces Added includes the entire footprint including Hendrickson Point.	SEALT	PEL Study Team
432	DOWL included a category and criterion in Level 2 Screening called “Level of public support”. In the Impact Table, the alternatives are scored using different factors: a percentage of support for No Build, and numbers of respondents who supported the Build alternatives. This criterion may not be appropriate for use in Level 2 Screening, or may require significant validation in order to be used for the following reasons:	Comment noted.	SEALT	PEL Study Team

433	Comparing unequal values (percentages and tallies) does not lead to a reliable finding, and needs to be corrected.	Comment noted.	SEALT	PEL Study Team
434	From what DOWL shared at the March 7, 2024 Joint Advisory Committee meeting, the Level 2 Impact Table refers to comments received during a period of public input a year earlier when important factors - including the presence of resources like the Mendenhall Wetlands State Game Refuge in the study area - were not shared with the public in maps and materials published by DOWL.	The data is based on a survey conducted in 2022 before any field surveys were conducted to gain interest between the build and no build alternatives. The survey asked between build alternatives which was preferred.	SEALT	PEL Study Team
435	In March 2, 2023 remarks to the CBJ Public Works & Facilities Committee, DOWL reported that in order to separate support for a second crossing from opposition to a second crossing, the commenters who selected No Build as well as one or more Build alternatives were not considered to be “No Build” supporters. However, commenters who selected more than one Build alternative were counted in both alternatives’ level of support. If this logic was carried forward into the Level 2 Screening, the criterion is compromised.	The survey asked for a selection between build and no build. A second question was asked to select between build alternatives. No repsondents were double counted.	SEALT	PEL Study Team
436	It is unclear that the “level of public support” is a valid criterion to evaluate a costly/ impactful project, as popularity is not a common filter for transportation projects.	Public interest review is an integral part of the planning process.	SEALT	PEL Study Team
437	DOWL must either provide a credible measurement of public support that reflects the current alternatives and the possible impacts, as well as a rationale for considering public support in screening, or discard this criterion.	Comment noted.	SEALT	PEL Study Team
438	DOWL has estimated construction and maintenance costs for the alternatives remaining as of March 2024. Advisory committee members asked the following questions, and SEALT is interested in gaining a better understanding of DOWL’s estimates.	Comment noted.	SEALT	PEL Study Team
439	1. Did these estimates consider repairs to the existing bridge? 2. How will maintenance change for existing roads on the mainland and Douglas Island? 3. Are improvements that are required by this project for existing roads and transportation infrastructure included in these estimates? 4. Did the estimates consider additional lanes for a new bridge as part of this? 5. How will a second bridge’s construction and maintenance impact the maintenance of the existing bridge over the long term?	1. No 2. Over time, there will be slight changes in how pavement deteriorates based on changes in travel patterns and the second bridge requires additional maintenance costs that do not exist today. 3. Improvements to the existing roads as required to build the initial infrastructure are included in the estimates. 4. No, expansion of the existing bridge was dismissed as an alternative as part of the Level 1 screening 5. A second bridge will slow extend the life of the existing bridge, reduce maintenance costs for the existing bridge, and provide an alternative crossing when the existing bridge is in need of major repairs or reconstruction.	SEALT	PEL Study Team
440	Regardless of the construction and maintenance costs, it is doubtful that the estimates include the environmental damages and mitigation that would be required for each alternative, particularly those that would impact 4(f)/6(f) resources and/or mitigation sites. At minimum, the impacts that we have noted above for the Sunny Point West alternative are certainly not included in DOWL’s estimates, as they did not indicate an understanding of those impacts in either the Level 1 or Level 2 scoring.	Mitigation requirements and costs are not known. Further review of alternatives and impacts would be conducted during a future NEPA evaluation and is outside the scope of this PEL Study. Consultation with jurisdictional agencies would be required to understand mitigation, and jurisdictional agencies (such as the USACE) will not evaluate mitigation until they have received a permit application.	SEALT	PEL Study Team

441	Impacting the SEALT conservation lands that are managed as mitigation sites for the Juneau airport would require re-permitting for the airport's expansion for which they were originally preserved in 2009, and then permitting and mitigation for the crossing at that location. This is not simply "double" mitigation in terms of difficulty, timing, or expense.	Comment noted. The airport based alternative did not move through the alternatives screening process.	SEALT	PEL Study Team
442	Impacts to existing mitigation sites would require an additional 6-18 months of negotiation and Interagency Review Team consultations to ensure that the re-permitting of active permits, new permitting for this second bridge, and the new mitigation selected to fulfill all of the permits meet the standards of the U. S. Army Corps of Engineers, the Southeast Alaska Land Trust, and agencies with jurisdiction and authority in the permitting process.	Consultation with jurisdictional agencies would be required to understand mitigation, and jurisdictional agencies (such as the USACE) will not evaluate mitigation until they have received a permit application.	SEALT	PEL Study Team
443	The question of mitigation has loomed large for SEALT during this process. SEALT operates the longest-standing compensatory mitigation program in the state of Alaska, having provided offsets to unavoidable impacts to aquatic resources to permittees like ADOT&PF and CBJ since 1998. Several of the properties that would be impacted by the proposed alternatives are SEALT mitigation sites.	Comment noted.	SEALT	PEL Study Team
444	As noted in the introduction, SEALT asked DOWL repeatedly for information on how DOWL would approach mitigation for a project that would likely require the most significant wetland mitigation of any project ever completed in the Juneau area, including planning, budgeting, IRT coordination, and permitting. No information has been provided, but based on the conversations where these questions were raised, it is unlikely that DOWL has adequately estimated the costs and requirements for mitigation.	Mitigation requirements are not known this early in the process. Consultation with jurisdictional agencies would be required to understand mitigation, and jurisdictional agencies (such as the USACE) will not evaluate mitigation until they have received a permit application.	SEALT	PEL Study Team
445	SEALT's impression that DOWL has not analyzed costs or mitigation thoroughly is reinforced by the fact that, at the March 7, 2024 Joint Advisory Committee meeting, DOWL called the part of their cost estimates that includes mitigation the "fudge factor". Using cost as a criterion that is reportedly inclusive of mitigation (rather than assigning a separate criterion) in screening without providing information about how estimates are reached - to the advisory committees or the public - does not reflect a sound process.	Mitigation requirements and costs are not known this early in the process. Consultation with jurisdictional agencies would be required to understand mitigation, and jurisdictional agencies (such as the USACE) will not evaluate mitigation until they have received a permit application.	SEALT	PEL Study Team
446	While there are four total mitigation sponsors in Southeast Alaska now, SEALT remains the only provider of compensatory mitigation that can specifically offset impacts to tidal wetlands in this service area. A second bridge at any of the locations covered by the alternatives within this PEL Study would require offsets for impacts to tidal wetlands. Because of this, SEALT would be the mitigation sponsor to fulfill the special conditions of a Department of the Army USACE permit to impact tidal wetlands within the study area.	Comment noted.	SEALT	PEL Study Team

447	However, there are three important considerations relating to cost and mitigation that SEALT urges the PEL Study team to include in the final PEL Study report: 1. Appropriate in-kind offsets for tidal wetland impacts are limited in Southeast Alaska, and almost nonexistent in the Juneau area at the scale that would be required by a second crossing project through the Mendenhall Wetlands. 2. Adequately mitigating environmental impacts for all six of the proposed Build alternatives will be extremely costly. 3. Mitigation for rare and highly valuable wetlands will add delays in review and permitting to a second crossing project.	Comment noted.	SEALT	PEL Study Team
448	Having reviewed the five survey reports/memos produced by the PEL Study in winter 2023-2024, and the preliminary scoring results for Level 2 Screening, the Southeast Alaska Land Trust makes the following conclusions and recommendations.	Comment noted.	SEALT	PEL Study Team
449	The JDNC PEL Study has failed to adequately consult with technical experts from resource agencies on key work products prior to integrating those work products in the screening and analysis for the study.	The PEL study team includes subject matter experts who have consulted on the Level 2 screening process.	SEALT	PEL Study Team
450	“Avoid, minimize, and mitigate negative impacts to the environment” should be a core goal of the PEL Study rather than an “additional goal”.	Recommendation noted.	SEALT	PEL Study Team
451	The JDNC PEL Study has produced sub-standard surveys and reports on regulated subject matter – including impacts to wetlands, impacts to fish habitat, impacts to eelgrass, and impacts to protected species such as eagles and salmon – without vetting the survey protocols or explaining how these reports would be “rolled into” a future NEPA process.	All survey protocols were vetted through the appropriate jurisdictional agency prior to fieldwork through approved workplans. These reports are considered pre-NEPA and used to gauge general impacts and study area characteristics.	SEALT	PEL Study Team
452	The JDNC PEL Study has not adequately addressed the potential mitigation needs for any of the alternatives, either the ones affecting SEALT mitigation sites (requiring re-permitting of the existing permit for the Juneau International Airport and others) or the alternatives simply affecting new special aquatic sites. SEALT remains available to consult with the PEL Study team or ADOT&PF on mitigation options.	Potential mitigation requirements and needs are not known for any of the alternatives. Consultation with jurisdictional agencies would be required to understand mitigation, and jurisdictional agencies (such as the USACE) will not evaluate mitigation until they have received a permit application.	SEALT	PEL Study Team
453	Based on comments provided to the JDNC PEL Study by the TAC and SAC during Level 1 Screening, and review of the preliminary Level 2 Screening, the following criteria and descriptions should be appended to the scoring tables and included in the final analysis.	Comment noted.	SEALT	PEL Study Team
454	“Low Marsh” Wetlands Impacted (Natural) - impacts to high value salt marsh	Recommendation noted.	SEALT	PEL Study Team
455	“High Marsh” Wetlands Impacted (Natural) - impacts to high value salt marsh	Recommendation noted.	SEALT	PEL Study Team
456	Fishing (Social) - impacts to sport fishing according to ADF&G	Recommendation noted.	SEALT	PEL Study Team
457	Hunting (Social) - impacts to waterfowl hunting according to ADF&G	Recommendation noted.	SEALT	PEL Study Team
458	Recreation (Social) - impacts to recreational activities by residents and visitors including hiking, dog walking, bird watching, wildlife viewing, and other recreation	Recommendation noted.	SEALT	PEL Study Team
459	Cultural Uses (Social) - impacts to cultural activities and uses of the natural resources within the study area, such as the harvesting of traditional foods, medicinal plants, spruce roots, and other traditional and customary harvests	Recommendation noted.	SEALT	PEL Study Team

460	Aviation Approaches (Safety) - impacts to aircraft approaches according to FAA	Recommendation noted.	SEALT	PEL Study Team
461	Aviation Facilities (Safety) - impacts to current and future uses of the Juneau airport to operate, modify, and expand airport facilities according to FAA	Recommendation noted.	SEALT	PEL Study Team
462	Navigability of Gastineau Channel (Safety) - impacts to navigability for each alternative according to USCG	Recommendation noted.	SEALT	PEL Study Team
463	Mitigation Site Replacement (ROW) - impacts to mitigation sites that would require special condemnation, permitting, and replacement procedures	Recommendation noted.	SEALT	PEL Study Team
464	Protected Lands Replacement (ROW) - impacts to protected lands (State of Alaska, CBJ, SEALT, and any others) that would require special condemnation, permitting, and replacement or mitigation procedures	Recommendation noted.	SEALT	PEL Study Team
465	Additionally, the PEL Study's final report should include some preliminary information and suggestions about additional planning and construction projects that would rationally follow a Juneau-Douglas North Crossing as logical termini. Planning tasks and projects may include a North Douglas Master Plan, as well as pedestrian and multi-modal transportation planning for North Douglas Highway and Egan Drive.	Comment noted.	SEALT	PEL Study Team
466	Logical termini are likely to include a Douglas Bench Road, North Douglas Highway improvements, and utility/water/sewer buildout for a North Douglas Highway extension. The costs, resources, and timing of those logical termini should not be swept aside as the PEL Study considers the elimination of more alternatives.	Comment noted.	SEALT	PEL Study Team
467	The alternatives remaining in the JDNC PEL Study Level 2 Screening are ranked here according to SEALT's review of the PEL Study materials, SEALT Habitat Mapping Project materials, and other trusted analysis published on the resources in and around the study area. As none of the Build alternatives have been well justified by the PEL Study so far, an EIS may consider additional alternatives that were missed or eliminated by the PEL Study.	Comment noted	SEALT	PEL Study Team
468	1. No Build a. All Build alternatives considered by this PEL Study would have serious impacts on the unique, rare, and irreplaceable ecological services, hydrology, surface water storage, and other wetland and habitat functions of the Mendenhall wetlands complex. b. Impacts to a site that is objectively important due to its status as a State Game Refuge and a Globally Important Bird Area should be considered with a high degree of scrutiny that includes, quantifies, and compares the farreaching material impacts to those resources from bridge construction in a cost-benefit analysis. c. An EIS conducted to an appropriate regulatory standard will evaluate whether the PEL Study adequately provided a "need" for a second crossing within its Purpose and Need Statement. d. The Purpose and Need for this PEL Study did not consider other types of transportation alternatives, including a ferry, that would avoid impacts to 4(f)/6(f) resources and other protected lands, substantially reduce costs, minimize regulatory review and permitting, and dramatically reduce engineering and design work for a second crossing project.	The existing conditions and data reviewed to develop the purpose and need statement included the limited connection between Juneau and Douglas Island and the risks associated with it, emergency response and access to workplace or other critical resources, traffic pressure on the Douglas Island Bridge and its intersections, and the housing shortage in Juneau. Other types of transportation alternatives were analyzed but dismissed due to not meeting the approved Purpose and Need for the project. A more robust NEPA analysis will be conducted outside of the PEL Study.	SEALT	PEL Study Team

469	2. Salmon Creek a. Minimizes 4(f)/6(f) impacts to the Mendenhall Wetlands State Game Refuge, CBJ Conservation Areas, and other 4(f)/6(f) resources such as trails and public access points SEALT Comments - JDNC PEL Study Level 2 Screening 55 b. Minimal functional impacts to SEALT mitigation sites c. Fewer regulatory and permitting requirements for impacts to protected resources d. Would only eliminate waterfowl hunting on the Refuge at Salmon Creek e. Lower mitigation costs f. Shortest intertidal crossing and use of existing interchange reduce impacts	None of the six alternatives evaluated in level 2 screening have been dismissed or promised to move forward into the NEPA phase at this time. The PEL study report will make those recommendations.	SEALT	PEL Study Team
470	3. Twin Lakes a. Among the five remaining "on-Refuge" alternatives, Twin Lakes is the least damaging to habitat and human uses, though impacts are significant b. Minimal to moderate functional impacts to SEALT mitigation sites, but severe functional impacts to 4(f)/6(f) resources c. Would shut down important waterfowl hunting areas on the Refuge d. Substantial impacts to salt marsh and mussel/rockweed beds at Neilson Creek (Douglas Island terminus), and extensive tidelands and shallows used by waterfowl and shorebirds at both termini e. Moderate to high mitigation costs	None of the six alternatives evaluated in level 2 screening have been dismissed or promised to move forward into the NEPA phase at this time. The PEL study report will make those recommendations.	SEALT	PEL Study Team
471	4. Vanderbilt a. More damaging to salt marsh, habitat connectivity, and Refuge integrity b. Substantial impacts to 4(f)/6(f) resources, including a key waterfowl and shorebird resting and feeding area c. Moderate functional impacts to SEALT mitigation sites d. Would shut down important waterfowl hunting areas on the Refuge	None of the six alternatives evaluated in level 2 screening have been dismissed or promised to move forward into the NEPA phase at this time. The PEL study report will make those recommendations.	SEALT	PEL Study Team
472	5. Mendenhall Peninsula a. Substantially damaging to habitat and function across all species of fish and wildlife that use the wetlands complex b. Moderate functional impacts to SEALT mitigation sites depending on the design and avoidance/minimization of impacts c. Due to the extreme relative costs and impacts to the environment, 4(f) resources, and SEALT mitigation sites, the Mendenhall Peninsula is fatally flawed and should be removed from consideration.	None of the six alternatives evaluated in level 2 screening have been dismissed or promised to move forward into the NEPA phase at this time. The PEL study report will make those recommendations.	SEALT	PEL Study Team
473	6. Sunny Point West a. Jointly with Sunny Point East, the Sunny Point West crossing is the most damaging crossing location to 4(f)/6(f) resources & SEALT mitigation sites. b. Costs to replace SEALT mitigation sites/functions with appropriately matched in-kind resources would make this alternative unfeasible and imprudent. c. Sunny Point West would bisect the hunting areas into unmanageable units, eliminating waterfowl hunting in the Refuge. d. The aviation safety concerns flagged by the Juneau Airport Board and staff have not been addressed in writing by the PEL Study. e. Due to the higher relative costs, impacts to the environment and 4(f) resources, and direct fill of SEALT mitigation sites, the Sunny Point West alternative is fatally flawed and should be removed from consideration.	None of the six alternatives evaluated in level 2 screening have been dismissed or promised to move forward into the NEPA phase at this time. The PEL study report will make those recommendations.	SEALT	PEL Study Team

474	7. Sunny Point East a. Jointly with Sunny Point West, the Sunny Point East crossing is the most damaging crossing location to 4(f)/6(f) resources & SEALT mitigation sites. b. Costs to replace SEALT mitigation sites/functions with appropriately matched in-kind resources would make this alternative unfeasible and imprudent. c. Sunny Point East would bisect the hunting areas into unmanageable units, eliminating waterfowl hunting in the Refuge. d. The aviation safety concerns flagged by the Juneau Airport Board and staff have not been addressed in writing by the PEL Study. e. Due to the higher relative costs, impacts to the environment and 4(f) resources, and direct fill of SEALT mitigation sites, the Sunny Point East alternative is fatally flawed and should be removed from consideration. Recommendations to PEL Study Team and Future Second	None of the six alternatives evaluated in level 2 screening have been dismissed or promised to move forward into the NEPA phase at this time. The PEL study report will make those recommendations.	SEALT	PEL Study Team
475	In order to reflect the best available information, more granularity should be required in the scoring tables. SEALT could support a range of -5 to +5, or the use of fractional scoring such as -0.5, -1, -1.5, etc.	Recommendation noted.	SEALT	PEL Study Team
476	The demonstrably flawed work products from this JDNC PEL Study, including the five reports on wetlands, eelgrass, intertidal habitat, bird and wildlife habitat, and bridge volume forecasts, and the scoring based on those reports, should not be included by reference or accepted de facto in the EIS or any portion of the NEPA process.	The supplemental information gathered to support the survey-level PEL process would be incorporated into the NEPA analysis if the information is appropriate, relevant, and sufficient (in quality and quantity) to support the NEPA analysis. Additional studies and information are likely to be needed to "contribute significantly to the environmental analysis" for the rigorous NEPA process.	SEALT	PEL Study Team
477	This PEL process has failed from the start to identify key resources and constraints, share them with the public and project partners, or use them in selecting and evaluating alternatives. For this reason, there may be additional alternatives considered by an EIS that were not considered within the JDNC PEL Study, or that were eliminated early for reasons that were not supported by the broad majority of technical reviewers.	The supplemental information gathered to support the survey-level PEL process would be incorporated into the NEPA analysis if the information is appropriate, relevant, and sufficient (in quality and quantity) to support the NEPA analysis. Additional studies and information are likely to be needed to "contribute significantly to the environmental analysis" for the rigorous NEPA process.	SEALT	PEL Study Team

32. Public Comment and Response Summary

Date Received	Name	Description of inquiry / request	Response	Response Date	Responder	Event
3/24/2022	Laurie Craig	Jake, Thanks to you and your colleague for explaining your research this morning on Juneau's trails. We met in the parking lot of the airport dike trail or Emergency Vehicle Access Road (EVAR) in airport vernacular. I noticed that you looked at the trailhead sign. There are more along the trail, and they are excellent. I took photos of two sets of three signs. These are erected by ADFG. One asks folks to be careful with their dogs. It is adjacent to a duo of signs. Farther along the trail is the trio. I have given you closeups so you can read these lovely signs. Because you are analyzing cultural resources, I'll suggest three more trails with very helpful signage. Auke Lake Trail — near its access from Glacier Highway — has three superb signs explaining geology and Tlingit usage of the area. These signs were created by Richard Carstensen with Discovery Southeast. They are very detailed. Richard has done two other similar trail signage projects that I know of: Kaxdigoowoo Heen Dei (aka Brotherhood Bridge Trail) and Outer Point Trail in Douglas. These are all worthy of special mention for their thoroughness, fine illustrations, maps, and historical research. As you are learning, Juneauites love our trails. Thank you for taking time to learn about them and share their value with your employers.	Good Morning Renee and Rachel! While Adam and I were conducting the windshield survey of 4f/6f properties in Juneau last week, we had a very pleasant interaction with a curious member of the public. We were unspecific in describing the overall project (e.g., a secondary crossing to Douglas Island), but did describe the work we were conducting insofar as we were documenting trails and recreation areas, in addition to historic properties. I provided Laurie with my DOWL card, and she followed up less than 8 hours later with the email below. I'm not certain how the project is incorporating public or stakeholder input, but wanted to provide this while it was fresh in my mind. I will be responding to her this week thanking her for the additional details and noting the designer for the trail kiosks/signs. If there is anything further you would like from me, please just let me know. Have a great week! Sincerely, Jake	3/28/2022	J. Anders	

		Let me know if I can help you additionally. Dog sign located at Mendenhall River where the dike trail turns east. Two signs near the dog sign, at the river. Trio of Mendenhall Wetlands State Game Refuge sings in the airport dike trail. There are many trail access points to the refuge. Below are closeups of this trio of signs.				

3/30/2022	Craig Dahl	Morgan This is just the introductory email to link up. As said on the phone, we would be very interested to be part of the committee process as well as having DOWL present to our chamber committee the process and timelines involved. I have no hesitation about taking credit for moving this project back onto the table, and for many reasons it feels like it's the right time to make this happen. We respect the process that has to be followed and would like to be involved along the way. As with any project – especially in Juneau – there will be a fairly organized group of opposition, so moving in line with all regulations is important. I know this has been said to DOT through the discussion on the MOU between DOT and the City & Borough of Juneau, but we wanted to urge that this process focus on the two (maybe three) logical alternatives rather than wasting time on the ideas that were looked at the last time around that had no hope of ever being approved and did not pass the test of other demands for the crossing. We recognize the significant cost of this crossing, which has always been one of the arguments against it – but future development of North Douglas for housing, deep water port, barge terminal, access to Eaglecrest Ski Area, emergency services etc etc. make this worthy of moving forward. It has taken longer that we expected to get the agreement done with the State, but timing may still be right in terms of the availability of federal dollars. I look forward to working with you on this project. Regards	Thank you, Craig. This information is helpful. We will get more information on the process to you soon. Morgan McCammon	3/30/2022	M. McCammon	Advisory committee invitation

		Craig				

4/8/2022	Karen Pallenberg	Hi Marie, Hope you are well. We live out N. Douglas and our neighbors recently had a small get together to discuss the upcoming Second Crossing project. Since I used to work in CBJ Engineering, I've been picking my way through people there to try to find out the status of the project. Looks like I should have started with you! Can you give me a brief summary on where the project is at? And do you have any suggestion on when the appropriate timing would be for the neighbors to have some input? At this point, anything you have would be awesome! Thank you!	Good afternoon Karen, Thank you for your interest in the Juneau Douglas North Crossing Planning and Environmental Linkages (PEL) Study. The Alaska Department of Transportation & Public Facilities (DOT&PF) has chosen the PEL process to take a fresh look at the study area, environmental setting, and potential alternatives. The objective of the study is to spend a greater amount of effort on the up front planning, environmental research, and public/stakeholder outreach, in order to learn more about the study area, garner consensus, avoid impacts, and streamline the future project development. This study is just getting started and will largely be completed over the next 12-15 months. The study will evaluate the project purpose and need and possible alternatives that could move forward into a future environmental documentation effort. To date there is no funding identified for further studies, design, or construction. The first Public Open House is scheduled for May 11, 4:30-6:30 pm, and will be held virtually. This Open House will focus on introducing the project and understanding the existing conditions. To supplement this public process, the project team has established two advisory committees that will meet four times over the next year: a Technical Advisory Committee focused on technical and regulatory issues and a Stakeholder Advisory Committee focused on understanding the range of community perspectives. The neighborhood associations in the project area have been invited to participate on the Stakeholder Advisory Committee and have all	4/12/2022	M. McCammon	

			committed to participating, including the North Douglas Neighborhood Association. The project website is currently under development and is expected soon: www.JDNorthCrossing.com. Please email the project team anytime at JDNorthCrossing@dowl.com. Thank you and we look forward to hearing more from you and your neighbors. Morgan McCammon			

4/21/2022	Amy & Stan Lujan	Project planners, We are excited to hear that this project is being reviewed again and hope that it can move forward quickly, so as not to miss out on upcoming funding availability! As Douglas residents, we've occasionally been caught in heavy traffic at Juneau's only bridge due to accidents or construction and thought, "What if...?" In addition to providing better emergency access and traffic flow, a 2nd crossing will make north Douglas so much more accessible and reduce fuel costs for traffic between Douglas and the valley, which would be greatly appreciated. Thank you for your consideration.	Good morning, Thank you for your comments on the Juneau Douglas North Crossing PEL Study. I have shared this with the project team and added you to the project email list. Below is the information for the upcoming Virtual Open House. Join us to learn more about the PEL Study process, provide feedback on the existing conditions in the area, and give us your thoughts on the draft purpose and need. This is the first of three open house meetings planned during the PEL Study. Virtual Open House No. 1 Wednesday, May 11, 2022, 4:30-6:30 pm Zoom (www.zoom.com) Meeting ID: 872 5158 1127 Meeting Passcode: 460799 Click here to directly link to the Zoom meeting Visit the website www.JDNorthCrossing.com for further information on the PEL Study. Thank you, Morgan	4/25/2022	M. McCammon	

4/21/2022	Brenda Taylor	Hi, I live on Mendenhall Peninsula Road. I'm writing because a friend of mine forwarded your email of April 13 re: Stakeholder Advisory Committee Meeting 1 on April 27 to me. She wondered - and now I do as well - whether there is anyone from our neighborhood/road on the Advisory Committee. I don't recognize names from emails - but I also don't know everyone on our road for sure. Do you know if there's anyone from Mendenhall Peninsula Road on the committee? If so, who? If not, may I attend? Thanks, Additional Comment Thanks Morgan, I am not aware of a Mendenhall Peninsula Rd and/or Engineers Cutoff Neighborhood Association and I don't see anything that would be close to that in the list registered with the city. I'm assuming that the Fritz Cove group only applies to the road itself and not to the entire Peninsula? Thanks for keeping me updated	Good afternoon, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. We have representatives from each of the neighborhood associations in the study area on the Stakeholder Advisory Committee. I have shared your request with the project team and added you to the study updates email list. Below is the information for the upcoming Virtual Open House. Join us to learn more about the PEL Study process, provide feedback on the existing conditions in the area, and give us your thoughts on the draft purpose and need. This is the first of three open house meetings planned during the PEL Study. Virtual Open House No. 1 Wednesday, May 11, 2022, 4:30-6:30 pm Zoom (www.zoom.com) Meeting ID: 872 5158 1127 Meeting Passcode: 460799 Click here to directly link to the Zoom meeting Visit the website www.JDNorthCrossing.com for further information on the PEL Study. Thank you, Morgan	4/25/2022	M. McCammon	

4/21/2022	Rachel Kelly	First of all - please do it! I was unable to find the proposed locations for this online, so I'll keep an eye out and provide more specific feedback once I see them but wanted to make sure you get my YES vote in for a second crossing. Thank you!	Good morning, Thank you for your comments on the Juneau Douglas North Crossing PEL Study. Alternative crossing locations have not yet been selected. I have shared your comments with the project team and added you to the project email list. Below is the information for the upcoming Virtual Open House. Join us to learn more about the PEL Study process, provide feedback on the existing conditions in the area, and give us your thoughts on the draft purpose and need. This is the first of three open house meetings planned during the PEL Study. Virtual Open House No. 1 Wednesday, May 11, 2022, 4:30-6:30 pm Zoom (www.zoom.com) Meeting ID: 872 5158 1127 Meeting Passcode: 460799 Click here to directly link to the Zoom meeting Visit the website www.JDNorthCrossing.com for further information on the PEL Study. Morgan	4/25/2022	M. McCammon	

4/21/2022	Roger Ramsey	The above would get my vote for a second crossing. It affects the least area. And lands on an area already heavily impacted by humans on the mainland side. Limits skier Traffic on north Douglas highway to a short distance. Lands on a city Lot on the island side. I hope this helps, See letter dated 4/21/2022	Good morning, Thank you for your comments on the Juneau Douglas North Crossing PEL Study. Alternative crossing locations have not yet been selected. I have shared your comments with the project team and added you to the project email list. Below is the information for the upcoming Virtual Open House. Join us to learn more about the PEL Study process, provide feedback on the existing conditions in the area, and give us your thoughts on the draft purpose and need. Thank you, Morgan	4/25/2022	M. McCammon	

4/22/2022	Helen Clough	To whom it may concern The FAQ document for this project says to sign up to receive study update emails from the website yet there is nowhere to sign up on the website that I could find. Like most Juneau residents I am very busy in the spring and summer and would much rather be fed info than having to log in to your project website regularly. I live on one of the transportation routes that will likely be an alternative so am very interested in the project as it would directly affect my property and property value to say nothing of my personal quality of life. Thank you.	Good afternoon, Thank you for your comments on the Juneau Douglas North Crossing PEL Study. I have shared this with the project team and added you to the project email list. Thank you, Morgan	4/25/2022	M. McCammon	
4/23/2022	Bruce Baker	Please add my email address to your public notification list for any 2nd crossing information. Thank you,	Thanks Bruce, we will add you!	4/25/2022	I. Gallion (CBJ)	

4/23/2022	Michael Stanley	Dear Ms. McCammon and JD North Crossing Study Team, Thank you for your response yesterday morning regarding the PEL Study for a North Douglas Crossing and the Stakeholder Advisory Committee meeting scheduled for this coming Wednesday. In order to provide your team with some background of the previous involvement by the North Douglas Neighborhood Association (NDNA), through its Second Crossing Committee, in prior studies and proposals for a second crossing, I am sending you four documents (all in one pdf), as follows: (1) a Joint Statement of Mendenhall Stakeholder Groups on the North Douglas Crossing Project; (2) a letter from the NDNA to the CBJ Planning Commission dated May 4, 2007; (3) a statement that was presented to the CBJ Assembly on January 27, 2007, by a representative of NDNA; and (4) a letter from NDNA to then-Mayor Botelho and the CBJ Assembly, dated September 26, 2006. These documents outline the efforts by the NDNA and its Second Crossing Committee (of which I was chair) to encourage the CBJ and others to address concerns we had regarding the impacts to the North Douglas neighborhood if a second crossing were built. Although these comments are fifteen years old, they reflect a lot of work devoted to the project as it was then conceived, and provide a starting point for your team to understand the concerns of residents of North Douglas. I look forward to participating in the Stakeholder Advisory meeting, and would be happy to answer any questions your team has about these matters at that time. I understand you will be sending out an agenda for the meeting, which I look forward to reviewing. Thank you.	Good morning, Thank you for this information and for participating in the Stakeholder Advisory Committee last week. This is important background material for the study, and we appreciate your sharing this with the study team. We look forward to your continued participation. If you would, please share the Open House Details with the NDNA, this can also be found on the project website: www.jdnorthcrossing.com. We would like as much participation as possible. Thank you, Morgan	5/4/2022	M. McCammon	Advisory committee invitation

		Mike Stanley				

4/26/2022	Patty Wahto	Hi Morgan. It was a great kick-off meeting yesterday. I started thinking, as I made the comment about 'why' the second crossing, and realized that local emergency and law enforcement would have been good to have on the meeting. Maybe for future. Maybe that is already planned for other meetings, but as the folks who respond to accidents and calls, both JPD and CCFR would be good to get input on the second crossing (purpose and need). Similar to the Egan-Yandukin project. Patty	Hi Patty, Thanks for your participation yesterday and for these comments. We do have emergency response as one of the emerging themes for the purpose and need, so it sounds like we are in agreement that this should continue to be an issue worth discussing. We will look for ways to collect their input for future meetings. If you have other thoughts that come to mind, keep them coming our way. Have a great day! Steve	4/26/2022	S. Noble	Advisory committee comment - Meeting 1
4/27/2022	Winston Smith	Discussion issues being recorded online. As a board member, I'm representing the Juneau Audubon Society. I currently have an appointment as a principal research scientist with UAF not UAA. On Wed, Apr 27, 2022 at 12:20 PM Winston Smith wrote: This Teams program sucks! I could not stay connected. If you have suggestions for future meetings, I'll consider it but I don't have time to waste signing in to some packgae a dozen times to try to get reconnected.	Hi Winston, Thank you for your email. We apologise again for the technical issues with Teams. We hope to have the next meeting (workshop) in-person. Copies of the meeting presentation and breakout room discussion/summary will be shared to all attendees. Kind regards, Jovie Garcia	4/27/2022	J. Garcia	Advisory committee comment - Meeting 1

5/5/2022	Alisha Falberg	Subject: [EXT] Questions on obtaining information on project Hello, Can you please tell me where I can find further information, as well as the PEL, for the North Douglas Bridge project? Also, how the public can submit comments. I am unable to make the May 11 open house. Thank you, Alisha Falberg	Hi Alisha, Thank you for your interest in the Juneau Douglas North Cross PEL Study. You can find information about the PEL Study on the website http://jdnorthcrossing.com/. The public can submit comments to email JDNorthCrossing@dowl.com. Also, the open house meeting materials, including the prerecorded presentation, will be posted to the website, under 'Open House #1' on 5/10/2022. This is the first of three open house meetings planned during the PEL Study. We have added you to the project email list for future study updates and open house meeting information. Kind regards, Jovie Garcia	5/5/2022	J. Garcia	
5/11/2022	Roger Ramsey	Thanks for the meeting. After further consideration, i have come up with a different preferred plan. It would be a tunnel that comes up to the Fish Creek Road intersection where a round about would be built. It would be dug from the industrially zoned property near Maplesden Way and all excess dirt could go into Bicknel's pond, which has ample room for it. The soil under the channel is such that it could potentially be used to make some of the ingredients for the superstructure of the tunnel. The boring company made a mile of 12' diameter tunnel for $10 Million. That wont work here but using some of their technology will. This will present the least cost, in all aspects, when environmental issues are considered Please see attachment.	Good morning Roger, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the project. Kind regards, Jovie Garcia	5/12/2022	J. Garcia	

		Thanks again, Roger				
5/12/2022	Charlie Herrington	Subject: [EXT] North Crossing Thank you for starting this process. I believe a second crossing is necessary for both public access and safety. I've heard rumors that the most sensible crossing location would be less than a mile north of the current bridge with one end at the Juneau Yacht Club. I see the logic there. It would probably be less environmentally impactful compared to a North Douglas crossing by the wetlands and Fritz Cove. Hopefully it could also aid much needed housing development on CCTHITA land uphill on the island side. However, I really hope the crossing is positioned at the north end of the island. That would support easier mountain access at Eaglecrest for valley residents and airport hotels. More importantly, a north crossing would expedite the development of the West Douglas Port, which should be the highest priority considered. With a relocated port, downtown land could be redeveloped into hotels	Good morning Charlie, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study. Kind regards, Jovie Garcia	5/12/2022	J. Garcia	

		and accommodations specifically for independent travelers, helping Juneau reduce its reliance on industrial levels of cruise ship passengers. Paired with a ban on non-owner occupied Airbnb units, Juneau's rental housing market could really improve with visitors staying in beds intended for tourism, not locals.				

5/12/2022	Duff Mitchell	Hi Team, I received a call today from Duff Mitchell, with Access Alaska Coalition. This group supports increased transportation connectivity in the Juneau area. He was requesting that the recording of the Open House be released publicly on the website. His group wanted to know what questions and comments had been made before making theirs. He also requested that this group be afforded a way to get more involved in the process and asked about the Advisory Committees. I told him that I would pass along his request to post the entire video and participation in the Stakeholder Advisory Committee. I helped him navigate to the prerecorded video on the website and the comment link. I also let him know that all ideas are on the table at this point and we welcome all comments. His email address is Duff.Mitchell@juneauhydro.com. He clarified that he is not representing Juneau Hydro, only himself and Access Alaska Coalition. Morgan McCammon	Phone conversation	5/12/2022	M. McCammon	
5/12/2022	Jim Dorn	Subject: [EXT] North Douglas Crossing Comments The channel is a significant migration corridor for salmon returning to DIPAC. The channel from Fish Creek to the Eaglecrest road has become one of the most productive and popular shore based sport fishing opportunities for returning salmon in the Juneau area. Any water flow restrictions that impact this migration corridor need to be mitigated. Consideration should be given to	Good morning Jim, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the project.	5/12/2022	J. Garcia	

		building a crossing on pilings as opposed to an earthen causeway like Egan Drive.	Jovie Garcia			

5/12/2022	Reed Stoops	Subject: [EXT] Public comment I am a Juneau resident since 1971 and have taken part in all of the past reviews for a second crossing. I remain unconvinced that it is needed enough to justify its high cost, no matter where it is located. The only significant benefit is that in the very rare event that the Juneau Douglas bridge would be damaged and temporarily closed there would be an alternative. To address that, the least costly alternative would be to build it where the channel is the easiest to cross, which is in the Pioneer's Home area. Even that will be very expensive and serve almost nothing but providing an alternative. So, though I would still oppose, that would be the least expensive and least environmentally damaging alternative. There are no real economic development projects that would be opened by a second crossing no matter where it is located. A new port at Point Hilda is not viable. Private land from Outer Point west has never been available and likely won't in the future. CBJ land is all upland of a North Douglas road exension and not particularly desirable. Damage to the Mendenhall Wetlands is a concern to many. The large budget for the project would be better spent by improving the road to Echo Cove and beyond and building a new ferry terminal that would cut the travel time to Haines and Skagway. Those would provide real economic benefits. Juneau's population has not grown for quite some time and there is no reason at the present to	Good morning Reed, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study. Kind regards, Jovie Garcia	5/12/2022	J. Garcia	

		assume it will have substantial growth in at least the next decade. Thank you.				

5/14/2022	Emily Kane	Honestly I don't understand the appeal. Folks living out past Eaglecrest certainly don't want a straight shot to and from Lemon Creek. Plus aren't we trying to stop disturbing wetlands? I would much prefer developing another senior living facility, another childcare facility and more affordable housing that is pleasantly landscaped and doesn't look cookie cutter with CBJ funds. . Thanks for recording my comments.	Good afternoon Emily, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study. Kind regards, Morgan McCammon	5/16/2022	M. McCammon	
5/14/2022	Jill Lingle	To those who can influence the planning process for consideration of a second crossing. First if I could vote it would be NO regarding building a large bridge from Douglas to Juneau. My main opposition is a concern it would detract from the natural beauty of the area. I also feel we are experience a world wide time of challenges and possible scarcity's that mean we should only focus on essential projects and expenses for a few years. Many people commute 30 minutes or more daily down south so making travel time shorter or easier should not be a consideration in my opinion. I also feel that people are accepting the risk of finding a way to evacuate in an emergency if they decide to live or work in Douglas. Finally. Has anyone considered building a four lane highway like Egan drive along Douglas, where there is a a need to ease traffic? Maybe this could include building a new four lane bridge right next to the one at 10th street and then removing the current bridge or rebuilding the current bridge!	Good afternoon Jill, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study. Kind regards, Morgan McCammon	5/16/2022	M. McCammon	

		Thanks for the opportunity to provide my thoughts. citizen for 24 years.				

5/16/2022	Duff Mitchell	Hi Team, I received a voice message over the weekend from Mr. Mitchell requesting again for his group, Access Alaska Coalition, to join the Stakeholder Advisory Committee. Please let me know your thoughts on this. And, the request to post the recorded Open House and Q&A session on the website. Thank you, Morgan McCammon	Good afternoon, I received your voice message. The team is looking for information on Access Alaska Coalition. Is this the same group as this https://www.accessalaska.org/? Here is information on the project website from the Open House: Southcoast Region Project, Alaska DOT&PF (jdnorthcrossing.com) Please send any comments, questions, or concerns to the study team at JDNorthCrossing@dowl.com. While past studies are considered by the team, no alternatives have been selected yet and all concepts are being reviewed as part of this study. We are interested in the ideas you and your organization have. Thank you, Morgan McCammon	5/16/2022	M. McCammon	Advisory committee comment

5/16/2022	Duff Mitchell	Hi Jovie, Duff Mitchell from Juneau called abou the JDNorthcrossing. He says he needs info by today for his board meeting tomorrow at 8am. You can call him back at [contact information redacted]. Marella Gungob	Duff, Thanks for your time on the phone today. As mentioned, all information currently available is on the project website: www.jdnorthcrossing.com. We will post the meeting record as soon as it is available/approved. I will enquire about posting the Zoom transcript with DOT&PF. With regard to the Access Alaska Coalition – I appreciate you sharing your purpose; if you could let me know a little more about your group and membership, I can share with the project team and we can talk further about the possibility of your group's participation in the Stakeholder Advisory Committee. I am the PEL Study lead – please feel free to reach out if you have any questions. Thanks Renee. Renee Whitesell, PTP	5/16/2022	R. Whitesell	Advisory committee comment

5/16/2022	Duff Mitchell	Hi Renee and thank you so much for calling me back. I did find Morgan's earlier email in my spam folder so I apologize for not seeing when she sent it out earlier today. The Access Alaska Coalition is a working group of employers and business folks in Juneau who advocate for more transportation access. Our Mission is Fostering improved access to all Alaska… for security, opportunity and prosperity for all Alaskans today and for future generations. I am attaching our letterhead that identifies our Board of Directors While we are primarily focused on to and from access in Juneau, the 2nd crossing has come up. We would be taking an economic, safety and security perspective in this or any other transportation issue. Please note that any involvement in the advisory would need to be approved by our board and a liaison established. We believe our perspectives, construction, environmental permitting and transportation planning experience of our members would be beneficial to DOT and your efforts on the PEL. I hope you find this information on the Access Alaska Coalition helpful. Kindest regards, Duff AAC board member	Access Alaska was added to the Stakeholder Advisory Committee			Advisory committee comment

5/17/2022	Tomas Boutin Juneau, AK	RE: [EXT] Public Comment Good afternoon, I participated in a group of concerned people back when the City and Borough of Juneau put a proposed N. Douglas Island bridge or crossing on its ballot. I think the group had about 200 active participants. My initial thought at this time is that so long as any proposed crossings do not bisect the Mendenhall Wetlands Refuge, and so long as municipal tax receipts are not a proposed construction and/or maintenance funding source then I am open to evaluating proposals. Therefore, a crossing that comes off the Mendenhall Peninsula, or a crossing that is near the hospital and the salmon hatchery could be worth evaluating but a proposed crossing falling in between those two locations would not be acceptable. However I would not think that a second crossing to Douglas Island should be among the top five or ten construction priorities within this borough, nor would I expect to see it on a list of the top 100 proposals for statewide construction. Thank you for your time.	Hi Tomas, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study. Kind regards, Jovie Garcia	5/17/2022	J. Garcia	

5/23/2022	Cynthia Gordon Douglas Resident	[EXT] North Crossing in Juneau Yes!! Please build another crossing. It's needed!!! Douglas Resident	Hi Cynthia, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study. Kind regards, Jovie Garcia	5/23/2022	J. Garcia	
5/24/2022	Skip Lundstrom	Subject: [EXT] Alternate Power Besides all of the good reasons for the second crossing, the point I would like to address is the need for a second 69KV power line to the island. Should the current high voltage line fail for any reason, the lower voltage line that runs through the bridge will only support the demand during summer months. I expect electrical engineers have been talking about this for years.	Hi Skip, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study. Kind regards, Jovie Garcia	5/24/2022	J. Garcia	

5/26/2022	Amy Rodman	RE: [EXT] North Douglas bridge project Southcoast Region Project, Alaska DOT&PF (jdnorthcrossing.com) I've reviewed at the DOT website and the April 2022 fact sheet for this North Douglas crossing project. The public outreach documents/website read like someone who has never been to Juneau drafted it. The local water bodies have geographical names and I suggest having DOWL staff in your Juneau office confirm the relevant names. Blank project-related maps don't appeal to the local audience, if authentic feedback is sought. This proposed second bridge should focus on a connection from Douglas Island to Juneau, specifically north Douglas. On the DOT website, the title and proposed second crossing should read, "Juneau-Douglas" to coincide with the existing Juneau-Douglas bridge (not "Douglas Island Bridge"). "Juneau-Douglas" demonstrates that the project has two destinations, such as "Juneau to Douglas" versus listing two town names consecutively as "Juneau, Douglas." This second bridge will likely be locally referred to as the North Douglas bridge. Below are additional suggestions for meaningful and relevant public outreach materials: • "The study area is between mainland Juneau and northern Douglas Island, in the area north of the existing Juneau-Douglas Island Bridge." • Vehicle cCongestion during peak trafficperiods on the existing Juneau - DouglasIsland Bridge; • "The previous studies highlighted several reasons for a north Douglas crossing:" • The potential for residential, commercial, industrial and port development at on the western side of Douglas Island. • "DOT&PF has chosen the Planning and	Hi Amy, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. We appreciate your suggestions and I have shared your comments with the project team. Kind regards, Jovie Garcia	5/26/2022	J. Garcia	

		Environmental Linkages (PEL) process to identify and evaluate a purpose and need for connecting Juneau with the north end of Douglas Island." • "The study area considers (several, one, two, how many?) potential crossing locations between the north end of Douglas Island and mainland Juneau in the channel area north of the existing Douglas Island Bridge." • I suggest labeling Spuhn Island and the Fritz Cove area (road) on the map if there is room, since that is where the proposed North Douglas bridge wraps around. • What is meant by the phrase "the channel area?" Were you referring to Gastineau Channel, which the Juneau-Douglas Bridge crosses? Or were you referring to Favorite Channel, which is north of Auke Bay ferry/transportation port? • Juneau is geographically synonymous with mainland. There is no need to state "mainland Juneau" in any public outreach verbiage. Douglas Island residents do not call themselves Juneauites. Thanks for your time. Take care, Amy				
6/2/2022	Barbara Mecum		On June 2, 2022, I drove out and visited with Barb Mecum and her husband. This visit was at their invitation as they desired me to see their home, the setting, and the view out the back of their home. They were very kind and welcoming. We had a good visit and they made it clear that they did not want to see a highway bridge connecting from Douglas Island to Mendenhall Peninsula because of the impact to their viewshed to the west. They indeed have a beautiful home on a	6/2/2022	S. Noble	

			very quiet shoreline across from the airport. They indicate that they frequently fish and kayak in front of their property. I thanked them for their gracious invite and left.			
6/9/2022	Duff Mitchell	Hi Renee. I am reaching back out to follow up on Access Alaska Coalition participation. Let me know. Kindest regards, Duff	Hi Duff, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. We notice that one of the coalition directors, Pat Kemp, is a representative on the Stakeholder Advisory Committee. We generally suggest that each organization have one primary representative and that person share information with their group, bringing feedback to the meetings. Please work with Mr. Kemp to participate with the Advisory Committee. As always, we welcome feedback from everyone so please let me know if you have any further questions. Best regards, Renee Whitesell	6/9/2022	R. Whitesell	Advisory committee comment

6/22/2022	Mike Stanley	Dear Ms. McCammon, I received your e-mail regarding the workshop on July 19. I accepted the invite, but also have a couple questions/comments. Is this workshop the same as the stakeholders' meeting that was scheduled for July 11 (as I recall)? I assume that it is and you've just moved the date, but I want to confirm. I will be attending the workshop on behalf of the North Douglas Neighborhood Association, Second Crossing Committee, so we won't need an alternate. But for future reference, the alternate from our group would be Julie Bednarski if I am not able to attend any future workshops. Her e-mail is juliebednarski@yahoo.com. I and other committee members met with the NDNA Board earlier this month, and I was authorized to continue as the stakeholder representative from NDNA. I will be keeping the board informed of developments in the PEL process, including the results of the workshop on the 19th. Thank you. Mike Stanley	Good morning Mr. Stanley, Thank you for accepting this invitation to participate in the workshop. Yes, we moved the date to July 19. This workshop will include members of both the Stakeholder and Technical Advisory Committees. I did include Julie Bednarski in the invitation as I have her name and email address as the alternate participant for the NDNA. We appreciate that you will be discussing the ideas developed in the workshop with the NDNA Board and membership and sharing feedback. We appreciate your participation and look forward to meeting you at the workshop. Morgan McCammon	6/22/2022	M. McCammon	Advisory committee comment - Workshop
7/5/2022	Barbara Mecum	Dear Steve, Just a quick note to extend a sincere thank you for making the time to come all the way out to our place on North Douglas in Bayview. We really appreciate your openness to gathering feedback and information on the project. We are looking forward to the many discussions ahead and finding our way through the process. So glad you're in charge! Thank you, Barb & Doug Mecum				

7/25/ 2022	Barbara Mecum		Hi Barb, Marie and I got your messages and we just wanted to pass along the current schedule that we are still following. We recently kicked off the alternatives development and will be preparing an interactive on-line tool for the public to participate in that process. We are still on track for having the second round of advisory committee meetings in October or November of this year. We will be in touch when we have more specifics on these issues. Thanks so much for checking in with us. Let me know if you still want to have a conversation. I am back in the office this week and available on my cell phone. Have a good evening, Steve	7/25/ 2022	S. Noble	

8/4/2022	Winston Smith	After reviewing the attached documents, I have a few comments listed below: First, I think it is important to differentiate a need from a desire because needs should take priority over desires in reviewing various options. For example, redundancy for health and safety concerns is clearly a need, whereas access for economic development is more of a desire. I don't see any distinction in the document or attempt to prioritize goals and objectives PEL is seeking to accomplish. Secondly, I perceive a bias in the existing document. Why should economic impact be listed above emergency response. Indeed, in my view emergency response is a need whereas, economic impact is a desire. Yet, in the list presented on page 3 has economic impact and developable land each at the top of the two columns of emerging needs. Also, development of growth areas is at the top of the needs list on page 4. This appears to be the driving influence in this process. In addition, in the list of goals to be met by various alternatives, enhance and protect public health and safety is near the bottom of the list. Three, although providing infrastructure consistent with CBJ planning framework is included as a criterion, little emphasis appears to be given to practical considerations, such as whether an option is doable because of costs, environmental barriers, or beyond the CBJ planning framework or expectations, which should be more explicit and front and center. Thank you.	Good morning Winston, Thank you for your input on the draft purpose and need statement. Your feedback has been shared with the team. Best regards, Morgan Revised Purpose and Need Statement shared online November 2022	8/5/2022	M. McCammon	Advisory Committee Comment - Purpose & Need

		Winston Smith				

8/5/2022	Linda Shaw	Hi Morgan, Molly Zaleski and I looked over the Juneau Douglas North Crossing PEL Study - Purpose and Need Statement and have the following comments. We support the following statement as important to the purpose and need of the project. "Improve existing natural environmental conditions where possible and avoid/minimize/mitigate adverse impacts to the natural environment." We felt the following two statements were seemingly contradictory. "Reduce overall vehicle miles traveled and thereby reduce emissions and improve viability of electric vehicles." and "Add roadway capacity and utility infrastructure to support the development of growth areas envisioned on North and West Douglas Island" Thank you for the opportunity to comment on the purpose and need statements. LInda and Molly Linda Shaw (she | her) Wildlife Biologist, Alaska Region NOAA Fisheries | U.S. Department of Commerce	Good morning Linda and Molly, Thank you for the input. I will share this with the study team. Morgan	8/8/2022	M. McCammon	Advisory Committee Comment - Purpose & Need

8/5/2022	Margo Waring	First, thanks to Ron for a clear statement of a clearly missing piece that was a major focus for the group I joined at Centential Hall. In addition, let me make a few additional comments. I note that the language of this document is vague, aspirational and often illogical. Purpose The purpose of the Juneau Douglas North Crossing Planning and Environmental Linkages (PEL) study is to identify a north crossing corridor that will reduce dependency on the existing North Douglas Highway, improve network connectivity, reduce travel time and emissions, provide redundant access, improve emergency response time, and provide infrastructure consistent with City and Borough of Juneau's planning framework. Need The successful solution should address the following needs: • Add roadway capacity and utility infrastructure to support the development of growth areas envisioned on North and West Douglas Island. No growth is envisioned for North Douglas in any CBJ planning document. The West Douglas planning document is due for a substantial review because the population projections and other constraints have changed dramatically, for example CBJ's adoption of a greenhouse gas goal. • Provide redundancy and reduce travel times for public safety and emergency response in the event of traffic disruption on the North Douglas Highway, Douglas Island Bridge, or Egan Drive. • Create a traffic network with greater connectivity to Egan Drive and Glacier Highway that includes improved motorized and non-motorized access to North Douglas Island and reduces transportation barriers to land development and emergency	Good morning Margo, Thank you for this input. I will share this with the study team. Morgan Revised Purpose and Need Statement shared online November 2022	8/8/2022	M. McCammon	Advisory Committee Comment - Purpose & Need

		response. The identified alternative(s) should also meet these additional goals: • Reduce overall vehicle miles traveled and thereby reduce emissions and improve viability of electric vehicles. Increasing miles available to be traveled on will, according to all studies, increase emissions. Juneau is a leader in per capita adoption of EVs. New federal incentives will likely increase adoption. It is hard to understand how increased miles increases the vialbility of EVs. • Improve the quality of life through reduced emissions, improved access, utility infrastructure, and economic development. This is vague and highly questionable: how will increased miles reduce emissions (even if some trips are reduced in total miles, a bridge to North Douglas will increase traffic by accessibility. There are no plans for utility infrastructure improvements for North Douglas. Utility infrastructure and economic development are only part of the speculative concept of a satellite development. • Improve existing natural environmental conditions where possible and avoid/minimize/mitigate adverse impacts to the natural environment. • Improve access and connection to recreational, cultural, and subsistence resources. • Enhance and protect public health and safety. Logically, development of a second crossing, even if a tunnel, will not improve the existing natural environment as there is no place where this is "possible". The natural environment may be changed but not "improved." Adverse impacts to the natural environment cannot be avoided. That leaves only mitigation and minimization.				

		• Satisfy applicable federal, state, and local plans, policies, and regulations. I would like to see how construction and use of a second crossing will help meet CBJ's climate goals.				

8/5/2022	Ron Somerville	Morgan, thanks for the draft Purpose and Need Statement. I thought it covered our collective efforts quite well. I do have, however, a couple of comments. It is possible that my comments are premature in that a more complete analysis will be presented later. Part of the PEL process and deadlines are unclear to me but I am a little slow at 84. I reviewed my notes from the meetings I attended and a couple of omissions seem important. Under the Public and Agency Involvement Section, the emerging themes were expressed and listed. One of the important themes left out was "protection of the existing natural environment within the study area." This of course refers to the Refuge in particular. Although many of us would support a second crossing to Douglas, the solution is in the details. Leaving out the communities concerns for environmental issues as a major theme is a major oversight. Every meeting I have attended there has been a clear expression from the public to make environmental issues a major part of this study. Under the "need" category your "additional goals", other than advocacy details, again skim over the environmental issues except to say, "Improve existing natural environmental conditions where possible and avoid/minimize/mitigate adverse impacts on the natural environment." Why not say, "develop ways to minimize impacts on the Mendenhall Refuge." One of the first meetings I attended, I offered that a major need was to identify all of the past crossing studies, recommendations and results with an assessment of why the proposals were unsuccessful. Except for the first study which	Good morning Ron, Thank you for this input. I will share this with the study team. Morgan Revised Purpose and Need Statement shared online November 2022	8/8/2022	M. McCammon	Advisory Committee Comment - Purpose & Need

		proposed that the major option was from the Mendenhall Peninsula to North Douglas, the others had varying degrees of impacts on the Refuge. In my humble opinion, the potential impacts on the Refuge is one of the major stumbling points for this proposal and efforts to minimize those concerns early on in this process is a major mistake. Thanks again for the draft. Ron Somerville				

8/6/2022	Christine Woll	Hi Morgan - Do you know what the topic / focus of the next stakeholder meeting will be and when it will be scheduled? I'm also curious if there will be any public engagement anytime in the near future for folks not in the stakeholder group? Thanks,	Good afternoon Assemblymember Woll, Thank you for continuing to engage with the study team, we appreciate your input. Prior to the next advisory committee meetings, we plan to host "pop-up" informational booths at popular locations to engage the public. The next Stakeholder Advisory Committee meeting is scheduled later in the fall. The team plans to share the draft preferred alternatives and screening criteria. With the input received from the advisory committees, the team will then share these with the public at an in-person public meeting. Additionally, the study team is developing interactive on-line tools to solicit public input on potential alternatives and the screening criteria. Updates are posted to the project website at www.jdnorthcrossing.com. The team is accepting input throughout the study process, so please share this website with your constituents. Best regards, Morgan	8/8/2022	M. McCammon	Advisory committee comment

8/8/2022	Alex Wertheimer	Re: [EXT] Second Crossing Scoping Dear People, I understand you are taking public comment on your scoping process for the "Second Crossing" analysis. I encourage you to have minimizing environmental impacts, particularly to the Mendenhall Wetlands State Game Refuge, as a major criterion in your site selection process. This wetlands area, already heavily impacted by development, is the ecological heart of Juneau. It is recognized as a migratory bird hot spot, as important habitat for juvenile salmon, and as one of the most popular hiking/walking areas in Juneau. As previous studies have shown, there are sites that have little or minimal impact on the wetlands, while still meeting other transportation goals. Please make sure that consideration of habitat preservation and ecological function is put front and center in your evaluation of options. Sincerely,	Hi Alex, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study, including future public meetings. Kind regards, Jovie Garcia	8/9/2022	J. Garcia	Advisory Committee Comment - Purpose & Need
8/8/2022	Alex Wertheimer	Thanks, Ron and Margo, for your insightful comments. Ron is spot on that protection of the existing natural environment should be in the list of priority "Needs". Burying in under "Additional Goals" makes it seem like a secondary consideration. In the previous analysis of preferred crossings (http://www.jdnorthcrossing.com//documents/JDNC_Previous_Studies_Summary_Report_FINAL.pdf) impact on the environment in general and the Refuge in particular was a major theme of public comment, leading to the identification of crossing sites with no to minimal impact on the Refuge. I believe that the study team is taking public comment until September 30 at JDNorthCrossing@dowl.com , and have been told that they have received few comments that	Good afternoon Alex, Thank you for this input. I will share this with the study team. Morgan Revised Purpose and Need Statement shared online November 2022	8/8/2022	M. McCammon	Advisory Committee Comment - Purpose & Need

		support environmental protection as a priority. So think about sending them a few words of encouragement as individual commenters. Alex				

8/9/2022	Brenda Taylor	Morgan et al, Thanks for sending this out. I have a few questions… - The maps that you had available at the Centennial Hall meeting were fascinating and informative. Is it possible to get electronic copies of them? - You mentioned that you'd be working on the criteria for ranking options, will they all be based off of the "needs" statements or will there be other criteria as well. I'm particularly interested in assessing impact to neighborhoods. Will choosing options become a matter of which neighborhoods protest most loudly or is there a way to generate more comprehensive understandings of neighborhood impact? Some questions that I'd consider (I realize that some are questions asked of individuals and others that are more broadly assessed): • If this proposed crossing were to go up in your front or back yard/view scape, would you still be in favor of it? • How much extra would you be willing to pay for a tunnel if it would not negatively impact any neighborhoods? • Which neighborhoods (where and how many) will be negatively impacted by this choice? Viewscape, increased traffic, changed drainage/erosion/wind, superseded right of way? Thanks, Brenda Taylor	Good morning Branda, Thank you for this input. I will share this with the study team. Morgan Revised Purpose and Need Statement shared online November 2022	8/10/2022	M. McCammon	Advisory Committee Comment - Purpose & Need

8/12/2022	Bruce Baker	Ms Heidemann, Ms. Gallion, and Dowl Staff - The one-page attachment is my August 12th public comment letter on this subject. Please include it in the public record, and please include my name and address on all public notices regarding this proposed project. Thank you, See letter dated 8/12/2022	Good afternoon Mr. Baker, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. McCammon	
8/14/2022	Bruce Baker	Attached, for the public record, is my one-page, August 12, 2022 comment letter regarding the "Second Crossing." Bruce Baker See letter dated 8/14/2022	Good afternoon Mr. Baker, Thank you again for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Please visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study, including future public meetings. Best regards, Morgan McCammon	8/15/2022	M. McCammon	

8/14/2022	Linda Baker	I oppose a bridge across Fritz Cove between the end of the Mendenhall Peninsula and the vicinity of the North Douglas boat ramp and request that it be removed from consideration from the Second Crossing Study Process. ● It would require the longest and most expensive second crossing alternative, requiring a very costly new road down the Mendenhall Peninsula plus the huge expense of a long bridge. ● The travel distance for medical, First Responders, plus residents' work, shopping, etc. would be unbelievably long, especially if the current bridge is unusable for whatever reason. ● It would have a significant negative impact on Fritz Cove whales, sea lions, and other marine life. ● Hopes for the development of the west side of Douglas Island are doubtful because Juneau's population isn't increasing and many government offices are moving to the Anchorage area. Linda Baker	Good afternoon Ms. Baker, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and will add you to the project contact list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study, including future public meetings. Best regards, Morgan McCammon	8/15/2022	M. McCammon	

8/15/2022	Liz Ortiz, M.A. Archaeologist II	Good afternoon Morgan, The Office of History and Archaeology / State Historic Preservation Office received your documentation and request for comment on August 4, 2022. Following review of the PEL Study Purpose and Need Statement, and notes from the technical advisory committee and public meetings, our office does not have additional comments. We find the document satisfactory, and look forward to continued consultation on this project. Thank you for the opportunity to review and comment. Please contact our office with any questions or if we can be of further assistance. -Liz Liz Ortiz, M.A. Archaeologist II Review and Compliance Alaska State Historic Preservation Office Office of History and Archaeology Department of Natural Resources	Good afternoon Liz, Thank you for this input. McCammon	Advisory Committee Comment - Purpose & Need

8/22/2022	Katrina LeMieux, NEPA Program Manager Alaska Dept. of Transportation & Public Facilities	Good morning, I apologize that this is a business day late but I was reviewing not only the PN Statement but also the comments that have been received to date (that I have been included on). My predominant comment is for the clarification of how a/this PEL study differs from the historic studies done in the past for this effort. It was clear in the responses received that there may be some level of misunderstanding on this point. A PEL Purpose and Need must be a statement of a transportation problem, which I think the team has presented in this statement; however, the feedback received is concerned that the study isn't prioritizing potential environmental impacts strongly enough. I think an effort should be made, directly with commenters and here forward on the project, to thoroughly explain this study's unique process and all the future opportunities and requirements for the identification of the LEDPA, and hopefully this will assuage some of this public concern about the assumed lack of prioritization of this topic. I apologize that I was not able to attend recent Alternatives Development Workshop as I was headed out of state that day. You may have thoroughly discussed all of these points with the public and they still feel the need to repeat their concerns, as it is important to them and as it would be to the project. This was just my only comment to the PN Statement provided for comment. Thank you, Katrina	Good morning Katrina, Thank you for the input. I will share this with the study team. Morgan McCammon Revised Purpose and Need Statement shared online November 2022	8/22/2022	M. McCammon	Advisory Committee Comment - Purpose & Need

8/26/2022	Katherine Russell	Hi there, I'd like to know a bit more on how a second crossing will impact wetlands? With more and more atmospheric river events having intact wetlands will be more important than ever. Where can I access environmental impact statements to review? I saw in the meeting notes from April 27 mention of "The University of Alaska Fairbanks has been undertaking research on wildlife conservation, in conjunction with the Audubon Society." Is this research specific to north Douglas? Where is it available? One of the concerns listed on the PEL fact sheet is "Congestion during peak periods on the existing Douglas Island Bridge." Many studies (such as https://ncst.ucdavis.edu/research-product/increasing-highway-capacity-unlikely-relieve-traffic-congestion) find that "adding road capacity fails to address congestion because it adds new drivers to the road and increases the overall distance driven" (https://environmentaldefence.ca/2020/09/15/why-building-more-highways-wont-make-your-commute-any-better/). What evidence is there that building a second crossing will alleviate congestion? Why is there a need for development on the west side of Douglas island? Per Alaska population data (https://live.laborstats.alaska.gov/pop/) the population of Juneau has stayed right around 30,000 since the mid-1980s. There is a well known and documented housing shortage in Juneau and across communities in SEAK (https://www.ktoo.org/2022/07/19/housing-identified-as-top-problem-for-southeast-alaska-	Good afternoon Ms. Russell, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments and questions with the project team and will add you to the project contact list. Visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study, including future public meetings. Best regards, Additional Response Good morning Ms. Russell, We will do our best to provide answers to your questions. This Planning and Environmental Linkages (PEL) Study is the early phases of environmental review and all work being undertaken is pre-National Environmental Policy Act (NEPA) evaluation. The study includes preliminary data collection on existing conditions and an early evaluation of the potential environmental impacts of crossing alternatives. No NEPA process will be initiated during the PEL Study, but one may move forward after the PEL Study is completed as an action to commence implementing any project(s) recommended as part of the PEL Study. The memoranda documenting baseline environmental conditions and any analyses undertaken as part of the PEL Study will be made available on the study website: www.jdnorthcrossing.com. The study mentioned in the summary of the April	8/29/2022	M. McCammon	

		businesses/), but seem like many housing issues are related to seasonal housing needs, and tourism rentals (such as AirBnBs). I personally find Juneau a very difficult place to find affordable year round housing but worry that per the fact sheet "The potential for residential, commercial, industrial and port development at west Douglas Island" will fall prey to the same issues Juneau is already facing of housing and land being purchased for tourism purposes and leaving the same issues of unaffordable long term housing. That was a lot of words, but essentially my point is if the population of Juneau is not growing, why is development on west Douglas needed? And if west Douglas is developed, how will the same issues of unaffordable property and housing be mitigated? I'm sure all of my questions may be common ones, so it be great to get any more info if possible! I'm grateful for the work that many people are doing on this. Thank you,	27 Stakeholder Advisory Committee meeting was brought up by a representative from Juneau Audubon Society. That group would be the first place to check if the results are available publicly. It is not being completed as part of this PEL Study. One of the goals of the PEL Study is to develop a Purpose and Need statement, which outlines the needs of any project to come out of this study. The draft Purpose and Need Statement is currently being updated in response to feedback from the Advisory Committees, consisting of representatives of Federal, State, and Local agencies, community organizations, environmental organizations, business interests, and members of the public. We anticipate sharing an updated Purpose and Need Statement as part of our public outreach activities planned for later in the year. We are also planning on sharing preliminary crossing alternatives, and a high level evaluation of the impacts of the alternatives. This PEL Study is considering the north crossing, and is responding to available social, environmental, and economic information, including information from the City and Borough of Juneau on housing availability and potential future locations for housing development. As far as the need for development on west Douglas Island and how that could impact the housing market, this is not being evaluated by the PEL Study and will likely be considered by CBJ as part of future planning efforts. The team appreciates your input. Morgan McCammon			

8/29/2022		Madam Mayor and Assembly Members, thank you for your service. My name is Merry Ellefson and I live at 8170 North Douglas. I'm following up on emails I've sent on behalf of the North Douglas Neighborhood Association and our second channel crossing subcommittee. NDNA was actively involved in prior efforts undertaken to identify a crossing location in 2005 and 2007. Tonight we ask you to consider three points regarding the proposed Crossing to ensure there is a well-planned future for North Douglas and the community at large. ● First, we take no position on any Crossing Alternative. As we've said, our interest is to ensure that the Assembly and the public get the best information possible to make the best decisions for North Douglas and our community. ● Secondly, we ask that the CBJ North Douglas Comprehensive Plan be updated. ● Finally, as the only neighborhood directly and clearly impacted by the crossing, we ask that you please engage our Neighborhood Association in the planning process by directly including us- as provided by CBJ Ordinance 96-38am. Although many of you are new here, these requests are not:) The 2013 CBJ's Comp Plan states the need for a North Douglas neighborhood plan and a study of associated transportation elements. To quote in part: "The analysis of a transport system to North and West Douglas from a new bridge should be conducted in conjunction with a neighborhood planning effort." Guidelines for Sub area 8 state: "in the near term,	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		conduct a neighborhood plan for North Douglas to address" (and I summarize) traffic, transit, residential use, parks, pedestrian safety, open areas, access to water, recreation, among others. Recommendation #2 of the 2007 Sheinberg Report states the CBJ "work with the North Douglas neighborhood to evaluate and plan for the crossing's effect on the neighborhood which could be done along with development of a comprehensive plan for the North Douglas sub-area." You can look forward to an email with our crossing history and maps, CBJ correspondence and our collaborative and decades-long efforts around this issue. We are here to help and support a planning process before any crossing impacts North Douglas.				

8/29/2022	Laurie Craig	Hi, I've been following this issue but did not receive notice of the last public meeting. Please add my name to your mailing list. Thank you.	Good afternoon Ms. Craig, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and will add you to the project contact list. Additionally, visit: http://jdnorthcrossing.com/ for the latest updates and additional information about the study, including future public meetings. Best regards, Morgan McCammon	8/29/2022	M. McCammon	
9/9/2022	Barbara Mecum	Good Afternoon, A group of concerned folks, Friends of Fritz Cove, are opposed to the second crossing alternative of a bridge from the Mendenhall Peninsula to the North Douglas Boat Launch Ramp Area as identified in the PEL Study. We have started the attached Petition, and share it with you now even though we continue to gain signatures. I have spoken directly with several assembly members about our concerns, and appreciate your calls back and listening. We request that this petition be added to the Public Record for this project. We would appreciate a response that you have received this email and that our comments/concerns have been added to the Public Record. Thank you, Friends of Fritz Cove Additional Comment	Good afternoon Barb, Thank you for sharing this petition and your concerns. We have added these comments to the Public Record. Please keep us updated on your efforts. Additionally, I hope you received the attached email, but just in case, I am including it in this response. On Saturday, September 17, members of the study team will be at Discover Eaglecrest Day, Eaglecrest Ski Area, from 10:00 am to 2:00 pm and at Safeway, 3033 Vintage Blvd, from 3:00 to 6:00 pm. The team members will be available to share information on the Study, answer questions, and hear ideas and concerns. Please share this information with anyone who may be interested. Thank you, Morgan McCammon	9/9/2022	M. McCammon	

		Hi Morgan, Appreciate your quick response, and the additional information on Sept. 17, sessions. Thank you, Barb				

9/9/2022	Michael Stanley, NDNA	Dear Ms. McCammon, Thank you for your patience in waiting to hear from our committee about a meeting. Several of our folks are traveling for parts of September and we've been trying to sort out availability. We've scheduled a committee meeting for this coming Monday, to discuss the PEL study, NDNA's concerns, and the logistics of a meeting with you. Based on travel schedules, it appears that sometime the week of September 26 would work best for a meeting. This will be after the public listening session you've scheduled for Saturday, September 17, but I anticipate that some of our committee will attend that, too. Please suggest a date, time, and place for a meeting the week of the 26th that works best for your team. Also, will the stakeholder comments that were due August 19 be available for review in the near future? We would be interested to learn what other groups are saying about the study and range of alternatives. Thank you. Mike Stanley	Good afternoon Mr. Stanley, The team would be available to meet to the NDNA Second Crossing Committee, and any other NDNA members interested, on Tuesday, September 27. When and where do you usually meet? The team is available to come to the group. We look forward to meeting with you and discussing your concerns. We hope to see as many members as are available at the Listening Sessions later this week as well. Thank you, Morgan McCammon Met with NDNA 9/27/2022	9/12/2022	M. McCammon	Advisory Committee Comment
9/9/2022	Winston Smith	What time and how? Additional Comment Unfortunately, I have a conflict. Hopefully, there will be another opportunity in the near future to engage. Thank you for the clarification. Winston	Hi Winston, On Saturday, September 17, members of the study team will be at Discover Eaglecrest Day, Eaglecrest Ski Area, from 10:00 am to 2:00 pm and at Safeway, 3033 Vintage Blvd, from 3:00 to 6:00 pm. The team members will be available to share information on the Study, answer questions, and hear ideas and concerns. Please share this information with anyone who may be interested. Thank you, Morgan McCammon	9/9/2022	M. McCammon	Advisory Committee Comment

9/10/2022	Thomas Gill	How do you join the session? What time?	Good morning, On Saturday, September 17, team members will be available to share information on the study, answer questions, and hear ideas and concerns at the following locations: Discover Eaglecrest Day, Eaglecrest Ski Area, 10:00 am to 2:00 pm Safeway, 3033 Vintage Boulevard, Juneau, AK, 3:00 to 6:00 pm Best regards, Morgan McCammon	9/12/2022	M. McCammon	
9/12/2022	Cinda Stanek	Hello, Could you please give me information about the "listening event" to be conducted at Eaglecrest this Saturday? What time? What will the format be? Do we submit questions and/or comments verbally or in writing? Any information you could give me would be very helpful. Thank you, Cinda Stanek	Good morning Cinda, On Saturday, September 17, team members will be available to share information on the study, answer questions, and hear ideas and concerns at the following locations: Discover Eaglecrest Day, Eaglecrest Ski Area, 10:00 am to 2:00 pm Safeway, 3033 Vintage Boulevard, Juneau, AK, 3:00 to 6:00 pm The format will be informal where anyone can stop by to learn about the study and have one-on-one conversations with study team members. You can ask questions and share ideas and concerns verbally or in writing at these listening sessions. You may also share your questions and concerns anytime through this email address or by contacting the study team directly.	9/13/2022	M. McCammon	

			Best regards, Morgan McCammon			
9/12/2022	Teri Tibbett, BBNA	Hi there! Would someone from your group be interested/able to attend (by Zoom) a Bonnie Brae Neighborhood Association meeting to present on the process for learning about or commenting on the PEL study? Most importantly, any upcoming meetings where the public can learn about the study or comment, etc. This would NOT be a meeting for BB residents to ask questions about proposed crossing locations, or provide comment. Thoughts? Teri	Good morning Teri, The study team would be happy to meet with the Bonnie Brae Neighborhood Association members. Please let us know when you have a meeting. We can outline the opportunities and processes for residents to learn about the study, ask questions, and make comments. Time permitting on the agenda, we can also take comments and answer questions. Thank you for the invitation. Morgan McCammon Met 10/26/2022	9/13/2022	M. McCammon	Advisory Committee Comment

9/16/2022	David Love	As a resident of N. Douglas, here are my submitted comments about the Proposed North Douglas Crossing: As was stated in the previous 2 studies: NO ADDITIONAL CROSSING IS NEEDED. Please scrap this project. Thank you!	Good morning, Thank you for sharing your input on the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Morgan McCammon	9/16/2022	M. McCammon	
9/16/2022	Sharon Taber	Will the information presented here be available in some easily accessible form to those Juneau residents unable to attend either of the Saturday presentations? Thanks! Sharon Taber	Good afternoon Ms. Taber, Tomorrow's Listening Sessions will be informal events where anyone can stop by to learn about the study and have one-on-one conversations with study team members. Team members will be available to answer questions and hear ideas and concerns verbally or in writing at these listening sessions. There will not be a formal presentation, and materials available at the Listening Sessions are also available on the project website, www.jdnorthcrossing.com. You may share your questions and concerns anytime through this email address or by contacting the study team directly. Best regards, Morgan McCammon	9/16/2022	M. McCammon	
9/17/2022	Julie Bednarski	Need a bench road if making more traffic.	Written comment received at the Listening Session			Listening session
9/17/2022	Mark Dale	I support any crossing to Douglas Island. I live at 6 Mile N Douglas Island. The Industrial Blvd and Mendenhall Pennisula options.	Written comment received at the Listening Session			Listening session

9/17/2022	Mike Spalding	Please build the crossing. Emergency services would build it themselves.	Written comment received at the Listening Session			Listening session
9/17/2022	Zack Jones	My preferred option is the tunnel. It is functional with low impact. Go under the roadway. Connect Fred Meyer to Eaglecrest.	Written comment received at the Listening Session			Listening session
9/17/2022		Cunningham preferred alternaives would connect with Egan Drive. I live on Fritz Cove Rd., and while I would love to see a bridge increase.	Written comment received at the Listening Session			Listening session
9/17/2022		I'm in favor of the Vanderbilt Hill option. This will give Douglas people better access to Lemon Creek/Fred Myer. This is most likely to reduce current rushhour traffic. If and when we go to a single high school, this will also reduce bus time for most students. Also, it gets too warm for Eaglecrest, the most viable ski location is up Lemon Creek.	Written comment received at the Listening Session			Listening session
9/17/2022		Stay away from the migrating bird refuge. Go with the least impact to ecology. Construction will be too disruptive anywhere along the built up areas.	Written comment received at the Listening Session			Listening session
9/17/2022		It would be nice to open up better access to North Douglas for future housing development. It also provides an alternative route in the event of a blockage at the draining way.	Written comment received at the Listening Session			Listening session
9/17/2022		I want the second crossing - Sunny Cove.	Written comment received at the Listening Session			Listening session
9/17/2022		Connect at Vanderbilt intersection.	Written comment received at the Listening Session			Listening session

9/17/2022		Access to Douglas Island, I do not believe Fritz Road can handle increased traffic. The curves are tight, and there are no street lights. Without defines curbs, walking on Fritz Cove at night is already somewhat dangerous without additional traffic. However, longterm we are very spportive of easier access to Douglas.	Written comment received at the Listening Session			Listening session
9/17/2022		A second crossing is critical for Emergency Management and Emergency Response. My preference would be by Salmon Creek/Hospital, with a 2nd choice being Vanderbilt Road. Do not build across the Wetlands to the extent possible.	Written comment received at the Listening Session			Listening session
9/17/2022		Don't want to break up the Wetlands. Infrastructure is there or more reasonable ar the hospital or Vanderbilt. Private hearing and zoning becomes a problem along with finding elsewhere.	Written comment received at the Listening Session			Listening session
9/17/2022		Thanks for the chance to comment. I would love to see an electric commuter ferry option from North Douglas boat launch area to the bay. Don't know that Im ready for a second bridge.	Written comment received at the Listening Session			Listening session
9/17/2022		Crossing at North end of the island, please. Port and Eaglecrest will really grow!	Written comment received at the Listening Session			Listening session
9/17/2022		The Sunny Point crossing is the most logical from an observational point of view.	Written comment received at the Listening Session			Listening session
9/17/2022		My preference is to keep Mandenhall Refuge intact, so prefer Salmon Creek access point. Aircraft Access Routes in low visibility means no super-structure protruding high. Protect existing N. Douglas residences. Not over the river mouth = too much fluid land and aircraft traffic that would be tough to build on and dangerous to traffic. Not atop Mend Pen. due to wildlife.	Written comment received at the Listening Session			Listening session

9/17/2022		Emergency floating bridge. The Army has them. I would support a bridge to the north end.	Written comment received at the Listening Session			Listening session
9/17/2022		I think this is a fantastic idea. Not just for safety, but for increasing access to housing and Eaglecrest. Thank you for conducting this study!	Written comment received at the Listening Session			Listening session
9/17/2022		Minimize visual impact to N. Douglas boat launch/Fritz Cove/Mendenhall Glacier viewshed. Increases mobility to/from Eaglecrest and N. Douglas boat launch.	Written comment received at the Listening Session			Listening session
9/17/2022		We need a second crossing as far out the road as possible.	Written comment received at the Listening Session			Listening session
9/17/2022		I think we would most definitely benefit from another bridge in the valley of course. By the airport, maybe tax us...	Written comment received at the Listening Session			Listening session
9/17/2022		I'm all for a second crossing to Douglas. I think a location near the airport/Mendenhall Pen. area would be ideal for future expansion of the Westside of Douglas, and better access for people to easily move from N. Douglas Valley without congesting more of the downtown/south Douglas area.	Written comment received at the Listening Session			Listening session
9/17/2022		Not interested in a second crossing. As a homeowner on N. Douglas. I live here because of the relative seclusion.	Written comment received at the Listening Session			Listening session
9/17/2022		Building a bridge/tunnel near Sunny Point seems rather silly as it cuts off 8 miles. Again, I feel that building a second bridge is not important for the health/economy of Juneau.	Written comment received at the Listening Session			Listening session
9/17/2022		I feel that a second crossing is not a necessity, and as a physician, it does not make sense from a medical economic sense. Tunneling to preserve	Written comment received at the Listening Session			Listening

		folks view while expense is the choice, I would make if we are willing to waste money.				session
9/17/2022	Cynthia Krehbiel	Good day, The fee for the JD Second Channel Crossing PEL study falls between $500K and $1M according to the RFP. What is the actual cost for this study? Thank you in advance for your reply. Sincerely, Cynthia Krehbiel Additional Comment Thank you for your reply and well-written explanation, Morgan. I will forward this friends and family that have discussed the cost with me. Sincerley, Cynthia Krehbiel	Good afternoon Ms. Krehbiel, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your question with the project team. The budget for this PEL Study is $1.5 to $2 million, funded by a partnership between the Alaska Department of Transportation and Public Facilities and the City and Borough of Juneau. The original RFP for contract support was estimated between $500K and $1M. It has increased as we have better understood the breadth of alternatives, public involvement need, and supporting analyses. In addition to contracted support, the project budget also includes State personnel. The goals are to explore potential crossing locations north of the Juneau-Douglas Bridge. The analysis conducted can be incorporated into a future National Environmental Policy Act (NEPA) process. We will add you to the project contact list. Please reach out if you have further questions or concerns. Morgan McCammon	9/19/2022	M. McCammon	
9/17/2022	Greg Capito	The population of Southeast Alaska including Juneau is in a long period of steady decline. So how do you justify spending massive amounts of public funds on this project in light of these declining population projections? Focus instead on operation, maintenance and management of existing highways including our chronically underfunded marine ferry system.	Good morning Mr. Capito Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

		Wake up and look reality straight in the eye.				
9/17/2022	Karen Bogert	I live at five mile on the North Douglas Highway. I have several concerns. The first one is I see jets and airplanes come in and take off very close to the water in this area. Do our pilots want an obstacle near the airport? The second is the destruction of the designated wildlife management area. Hundreds of birds come here most likely for the fish. Do our tourists want to see this amazing viewpoint destroyed? The third is the burden to the average tax payer to build and maintain a bridge. Does the traffic demand warrant the expense? The commute is really not that long compared to commutes in the lower 48 and it is a beautiful drive. If a port will be developed in West Douglas could a commuter ferry go there? Finally this is the only home my grandchildren have known. Please don't destroy it. It would mean a great deal to me for my grandchildren's grandchildren to enjoy the Alaska we know and love.	Good morning Ms. Bogert, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

9/17/2022	Leah Heiman	Hello, I didn't make it to the listening sessions today so thought I'd email to share some concerns I've had over the years. My biggest concern is the negative impact of widened roads and increased traffic in currently quiet neighborhoods on either side. I have heard talk over the years of building a road through Mendenhall Peninsula either on Fritz Cove or Mendenhall Peninsula Road (where I live). A north crossing at the end of "MenPen" road for instance would greatly increase traffic on our narrow little road, destroying our quiet no-outlet neighborhood. It would likely require widening the road and taking property from homeowners along the road putting our houses closer to a wider, busier, faster road. Although Fritz Cove road is already wider, I'm concerned using that road would increase traffic on Engineer's Cutoff which is narrow and curvy. When Engineer's Cutoff is open as a pass-through to Fritz Cove in spring, summer and fall, traffic on Engineer's Cutoff increases quite a lot and it is more dangerous as as more vehicles zip around the narrow curves. I worry for the pedestrians and bikers I often see on the sides of that road. Widening the road to accommodate more traffic is a lousy option due to the negative impact on homes along Engineer's Cutoff. I hope you can find a way to get the road/bridge that's needed for emergency/safety purposes without negative impacts to existing neighborhoods or destroying the wild beauty of this area for further future development and growth. Don't "pave paradise and put up a parking lot" as the song goes.	Good morning Ms. Heiman, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

9/17/2022	Nathan Leigh	The alignment that goes down the middle of Mendenhall Peninsula is the best because it avoids the impact to Mendenhall tide lands and opens up the Mendenhall peninsula to develop more housing to help ease the housing shortage in Juneau.	Good morning Mr. Leigh, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	
9/17/2022	Rich Brenner	Hello, While I do have some concerns about impacts to migratory birds, I am very supportive of this project. We desperately need a backup plan in case the existing J-D bridge has problems. Another bridge would also shorten commute times to various activities. I encourage you to look at locations for the bridge that are as far to the north as possible, as I think that would shorten the commute for the most people. Best wishes,	Good morning Mr. Brenner, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

9/17/2022	T.J. Duffy	To the planners: I fully support a second crossing between Juneau and Douglas Island without reservation. Consistent with the map below, my preferences -- in order of preference -- are as follows: 4 - West Sunny Point. For the same reasons as above in #3 below. 3 - East Sunny Point. This makes the most sense, across the Mendenhall Wetlands in an area where boats cannot navigate, water is shallow and has the most land mass. Glacial rebound is raising the land in this area and Gastineau Channel is merely a trickle. 2 - Vanderbilt Hill. Same reasons as above. I am opposed to the following considered crossings for the following reasons: 1 - Salmon Creek. Traffic improvements would be minimal due to its proximity to the existing bridge. 5 - Eagle Crest/8 mile. - We might have to extend our airport runway in the future. 6 through 14. - Too much water, too much money. I feel the concerns for waterfowl in the Mendenhall Wetlands area are minimal as there would be wildlife concerns wherever a second crossing is contemplated. Wildlife will adapt, and people likely won't be driving cars in 50 years anyway. I rarely see waterfowl in that area anyway. Hunters can go elsewhere. They shouldn't be hunting there anyway.	Good morning Mr. Duffy, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

		Respectfully submitted,				

9/18/2022	Carole Bookless	Hi, I was unable to attend the workshop. How do I find out what options were discussed at the workshop? C. Bookless	Good morning Ms. Bookless, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I will add you to the project contact list. The meeting materials and a summary will be added to the website soon. Please visit http://jdnorthcrossing.com/ for the latest updates and additional information about the study, including future public meetings. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

9/18/2022	Sandra Shaw	Hi, I'm writing to voice my thoughts on the N Douglas crossing being proposed. We've lived at N Douglas for 28 years. Yesterday in the Juneau Empire was the first time we've seen a map showing locations you're considering. The map should've at least had mile markers on it but didn't. That said, I can clearly see that at least 2 of the locations you're considering for the crossing would be extremely close to our property. We purchased our property 28 years ago for the quiet, rural area feel it offers, not to live next to a 2nd crossing. I can only imagine the worry and concern many other N Douglas residents now have as well, about a 2nd crossing being built next to their homes and properties, perhaps even having property taken from them through eminent domain. While I may not agree with a 2nd crossing, it's pretty clear that City and State officials are going to push it through one way or another, even though the majority of Juneauites have said no to it over and over again. So, to me, the question is how to build this in a way that least disturbs N Douglas residents with existing homes/property. The answer is to build it at the N Douglas launch ramp or just past that. There are no existing homes there that it would disturb. It may change the view for homes in the cove there but it wouldn't be built right next to their homes/properties. Granted, that location may come in more expensive but it's closest to backside of Douglas that officials want to develop for housing and a deep water port, which let's face it, is the primary reason this 2nd crossing is being pursued, yet again. It's also been mentioned that N Douglas launch ramp needs improvements to handle the increased usage so it could potentially all be done at the same time.	Good morning Ms. Shaw, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments, including the correction you noted, with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

		If the 2nd crossing is built any further north, such as 3 1/2 mile, or Fish Creek, etc then eventually we'll see officials saying we need a 3rd crossing to handle traffic from a new deep water port or housing development on backside of Douglas. Building the 2nd crossing at or past N Douglas launch ramp would alleviate the eventual need for a 3rd crossing that will occur due to development. It would also reduce new traffic and the corresponding danger that will be generated from deep water port and housing development going by existing N Douglas homes. While it may be more expensive than other locations presently being considered, it would in the long run, save money and be closer to the new development the City and State want to pursue and cause less disturbance to existing N Douglas residents. Thank you for your time and consideration, Sandra Shaw A correction to my comments submitted....a sentence said "If the 2nd crossing is built any further north, such as 3 1/2 mile, or Fish Creek, etc then eventually we'll see officials saying we need a 3rd crossing to handle traffic from a new deep water port or housing development on backside of Douglas." I wish to correct that to read...."If the 2nd crossing is built any further south....."				
9/18/2022	Scott Novak	As a starting point, the preferred location would be between the airport and fish creek road. This location provides the greatest benefit to the public to facilitate commerce, recreation, emergency response and future development of North Douglas. While cost and other issues may make this location impractical, staying as close as possible to this site would be strongly encouraged.	Good morning Mr. Novak, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards,	9/19/2022	M. McCammon	

		Thanks,				
9/19/2022	Dave Hanna	I am writing in support of a North Douglas crossing. I believe the further north the better contrary to the last DOT study. I believe most folks would rather drive an extra mile or two if it was the choice between Egan Drive or the North Douglas Highway. Proximity to the West Douglas extension only makes sense for both residential and commercial purposes. If freight and fuel could eventually be brought in at North Douglas it would make sense economically and environmentally eliminating the truck traffic through downtown Juneau and shortening the delivery time as most the goods and services are for the main population base in the Mendenhall valley. In addition it would reduce the commute to the Eaglecrest Ski area and open up possibilities for better recreational boating opportunities perhaps separating the commercial tour users from the local users. Thank you for your consideration in this matter. Dave Hanna	Good afternoon Mr. Hanna, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

9/19/2022	Garett Paul	Hello, I would like to voice my support for a second crossing between the Juneau Mainland and Douglas Island. This is long needed for the economic growth, recreational opportunities, and developmental growth of Juneau. I'm a born and raised Juneauite and have seen a need for this crossing for a long time. My observed ideal location for this crossing is departing from the Sunny Point interchange and connecting near the (what use to be) Peone Farm on Douglas. In discussions with friends, family, professional peers and City management they feel the Sunny Point option is too close to the 1st crossing (Juneau-Douglas Bridge). I disagree. Sunny Point is Approximately 5.6 Miles from the J-D Bridge and lands relatively close (~1 Mile) to the Eagle Crest Intersection and approximately 3.6 Miles from the North Douglas Boat Launch, and 7.2 Miles from the End Of North Douglas Highway. In context, South Douglas Highway is only (roughly) 2.5 Miles in length before you get to Downtown Douglas/Sandy Beach. Sunny Point already has an interchange, granted some changes may be needed, but it already has an interchange. Any other location besides Sunny Point introduces some very challenging hurdles to overcome.... Those include, added length, more environmental impacts, added cost and the need for additional infrastructure to make the connection function. Other locations further north than Sunny Point are simply not logical. Having experience in public opinion and process, i know this team is likely getting a lot of Not In My Back Yard (NIMBY) input. The fact of the matter is	Good morning Mr. Paul, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

		that you will not be able to avoid having this in someone's backyard. Please don't let the NIMBY response sway what should be easy and logical decisions. Sunny Point makes the most logical sense, unless of course we relocate Juneau's 1.6-Mile-Long Airport Runway and Mendenhall River. If you move the runway and the river, the possibilities are endless. Thanks for taking my comment. Garrett Paul				

9/19/2022	Kaia Rongstad-Paul	Hello, I'm writing in support of the second crossing from North Douglas for several reasons. As a resident of North Douglas, I'm keen on (maybe somewhat selfishly so) the shortened commute time to and from the valley. Currently all of the traffic funnels along the mostly straight two lane highway to get to and from the bridge. There are people driving along the road at 70+ MPH daily and I believe adding a second crossing may help cut down on some of that and that it could have the potential to cut down on some of the wear and tear that the current roadway gets. This will increase access to Eaglecrest, especially as they develop the area for more year round patronage, which is a positive for the city. A second crossing could (hopefully) lead to the development of additional housing areas out North Douglas and even around the north tip of the island where there is more buildable land. Lastly, adding a second crossing is necessary for safety. Not only would a second crossing increase the accessibility and response times for emergency responders/services, but it would give a second option should anything happen to the current bridge, such as a barge hitting it again to the point it's not safe to use. No one is going to want this in their "backyard" but I think the benefits greatly outweigh the cons and I hope that this does move forward.	Good afternoon Ms. Rongstad-Paul, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

		Thank you,				
9/19/2022	Robert Heide	Good morning- My family and I live at 8270 N Douglas Hwy. I'm writing to comment on the proposed second crossing. I was able to see the proposed crossings and speak with someone during Saturday's Discover Eaglecrest Day. We purchased the house out North Douglas for many reasons, the foremost being the ability to	Good morning Mr. Heide, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/19/2022	M. McCammon	

		have a less busy and noisy retreat from the city. I noticed four proposed crossings that would directly impact the life we worked hard to make for ourselves; two of which were further north of our house and the other two slightly south; all four make landing on the peninsula of land that backs up to our property line. I am concerned that any of these four crossings will negatively impact our life, in several ways. The increased N Douglas Hwy traffic will make for more dangers bike rides with my toddler, less safe dog walks, and further degradation to our stretch of the road. Increased vehicle traffic will also increase the noise pollution- something which we already deal with due to the airport in close proximity. I am also concerned about the impact to the wetlands near our house. I have been on the fence about the second crossing but having seen these four proposals, I am overwhelmingly against it. I hope you take into consideration the direct and indirect impact this will bring to myself, my family, and my neighbors. Thank you,				

9/19/2022	Teri Tibbett, BBNA	Hi there! I heard the crossing choices would be listed today on the website. Are you able to send me the link? Thanks! Teri	Hi Teri, Thank you for reaching out. The materials that were shared at the Listening Sessions, including a map showing the ideas developed at the July 19 Alternatives Development Workshop, are posted on the www.jdnorthcrossing.com site on the Meetings page. Here is the link directly to the pdf document: http://www.jdnorthcrossing.com//documents/Boards%20for%20JDNC%20Pop-up%20Listening%20Sessions_v2.pdf We have a presentation to the Bonnie Brae Neighborhood Association as a meeting to be scheduled. Please let us know when you would like to have someone share with the group. Best regards, Morgan McCammon Met with the BBNA 10/26/2022	9/19/2022	M. McCammon	Advisory committee comment

9/19/2022	Thomas Gill	How do I access written information and maps for the current location options Tom Gill Additional Comments Tom, Thank you for sharing that information. We will look into the issue. If you could please, share what browser you are using. Morgan McCammon -----Original Message----- From: Thomas Gill Sent: Wednesday, September 21, 2022 5:13 PM To: Morgan McCammon Subject: Re: [EXT] Location sites Morgan none of those links work They show a table of contents and a map with colored lines Docuements has nothing. Any other ideas on how you can find out anything information at all Tom Gill	Good morning Mr. Gill, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. The materials shared at the Listening Sessions, including a map showing the ideas for crossing locations we have heard so far, are posted on the www.jdnorthcrossing.com site on the Meetings page. Here is the link directly to the pdf document: http://www.jdnorthcrossing.com//documents/Boards%20for%20JDNC%20Pop-up%20Listening%20Sessions_v2.pdf. Other informational and background documents are available on the Documents page. Baseline data and environmental setting maps will be added this week. I will add you to the project contact list. Please reach out if you have any further questions. Best regards, Morgan McCammon	9/20/2022	M. McCammon	

9/20/2022	Teri Tibbett, BBNA	Hi again…Do you know if the next (fall/winter) public meeting will be before or after October 26? It looks like our next meeting will be October 26 (not Sept. 28). But if your next public meeting is before Oct. 26, then we may need to reconsider when our next neighborhood meeting is. Thanks for your patience with all these emails! Teri ----- Original Message ----- From: "TERI TIBBETT" To: "Morgan McCammon" Sent: Tuesday, September 20, 2022 6:07:41 PM Subject: Re: [EXT] Re: Reminder - Join us for the Juneau Douglas North Crossing PEL Study Listening Sessions tomorrow, September 17, 2022 Thank you Morgan! One last question, are there descriptions for the choices listed in the photo with the colored lines? Also, is it likely the crossing choices that cross the airstrip will actually be in the running? Are you available to be at the Bonnie Brae Neighborhood Association meeting (by Zoom) either on Wednesday, Sept.28 or Wednesday, Oct. 26? We may be cancelling the Sept. 28th, in which case it'll be the Oct. 16 meeting. Let me know! Teri Additional Comment Hi Morgan, Great! I'll add you to the agenda (first after approval of agenda and minutes). Below is the Zoom info, see you then!	Good afternoon Teri, The team will be available to present to the Bonnie Brae Neighborhood Association on October 26. Please share the time and meeting information. We are planning the next public meeting for mid-December. Sharing this information at the October meeting would be timely. Please send all the emails needed or feel free to call. We appreciate your involvement and input into this study. Best regards, Morgan McCammon Met with BBNA 10/26/2022	9/22/2022	M. McCammon	Advisory committee comment

		Teri				

9/21/2022	Gina R. Heffern	Good morning, I am a firm supporter of a second crossing between Douglas Island and Juneau; I live on North Douglas and would certainly enjoy an additional access point to Juneau. My biggest concern and goal for a second crossing is to reduce transit times for emergency services. Living far out North Douglas I often worry about the transport times for EMS to reach my family in the event of an emergency. I think this should be the highest priority for this project with the ultimate goal of making Juneau a safer place to live for our citizens that reside far from the hospital. For this reason I believe that a centrally placed second crossing would be of the highest benefit to the community. Many of these more central options (those between Vanderbuilt Hill and Salmon Creek) are also much shorter crossings which seem to be the most practical from financial, construction, and maintenance perspectives. Thank you for accepting comments.	Good morning Ms. Heffern, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards,	9/12/2022	M. McCammon	
9/21/2022	Rick and Lisa Currier	Hello, We are interested in the Juneau Douglas second crossing project. Please apprise us of public participation events and project updates. Regards,	See next response			

9/21/2022	Rick and Lisa Currier	Hello, Please include us in any updates or meeting announcements for a potential North Douglas Crossing. Additional Comments Thanks, Morgan, We appreciate your efforts and look forward to receding updates. We'll submit comments in a week or so. Regards,	Good morning Rick and Lisa, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. We received both of your emails requesting to receive notice of public meetings, opportunities to comment, and project updates. I will add you to the project contact list. The study team welcomes comments any time, please send comments and questions to this email address. Additionally, visit http://jdnorthcrossing.com/ for the latest updates and additional information about the study, including future public meetings. Best regards,	9/21/2022	M. McCammon	
9/23/2022	Thomas Gill	Morgan Thank you very much for your reply I'm using a Google browser on an IPhone 13. Hope this helps In the meantime is there an office or a display room with second crossing information? Stay healthy Tom Gill	Hi Tom, I am including my colleague in Juneau on this reply. Nina is in the Juneau Office and is very knowledgeable about this study. She would be happy to set up a time for you to come by, view information, and ask questions. Here is her direct contact information: Nina Keller Horne Transportation and Environmental Planner DOWL - (907) 562-2000 | office (907) 865-1246 | direct nkellerhorne@dowl.com | email Best regards, Morgan McCammon	9/23/2022	M. McCammon	

9/30/2022	Matthew Robus	I would like to submit several concerns regarding the proposed "second crossing" between mainland Juneau and Douglas Island: • The area below the high tide line between the Mendenhall Peninsula and Salmon Creek, largely encompassed by the Mendenhall Wetlands State Game Refuge, is an area of extraordinarily high value for fish and wildlife resources and for public recreation. • In addition to being designated as a state wildlife refuge by the Alaska Legislature after a grassroots effort by Juneau's public, the Mendenhall Wetlands have been identified as an Important Bird Area by the Audubon Society in a national canvassing of bird habitats; wetlands of this nature and expanse are not found elsewhere in our region and the area serves an important role in the migration of birds to and from their northern nesting grounds. • This area serves year round as a heavily used recreation area for exercise, birdwatching and other nature pursuits, and is the most important migratory bird hunting area in the region. • The wetlands serve as important rearing habitat for fish and other aquatic species. In summary documents issued thus far, the PEL process has included a general concern for minimizing impacts to environmental resources as a second-tier issue; given the values of the Mendenhall Wetlands and the long-standing support of Juneau's public for the state refuge it would seem more logical to give the integrity of these wetlands the highest possible priority. Past work on a second crossing has garnered information on construction constraints that should be incorporated into the present effort. Rather than asking the public for data-free	Good afternoon Mr. Robus, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	9/30/2022	M. McCammon	Advisory Committee Comment - Meeting 2

		opinions on crossing routes it might make better sense to seek input based on known constraints and limitations. While a crossing that bisects the Mendenhall State Game Refuge might not directly disturb many acres, the disruption to bird and fish behavior will be significant, and buffers around the project would dramatically affect hunting in the most important waterfowl hunting area in the region.Based on my general understanding of the difficulties and expense of building a crossing through the refuge as well the uniquely high values of this wetland area I believe that the best and most feasible route for a new crossing would avoid the refuge altogether. A crossing at Salmon Creek or from the Mendenhall Peninsula to the northern end of Douglas Highway would largely avoid impacting the area I have concern for. Thank you for the opportunity to comment. Matthew Robus				

9/30/2022	Nancy Waterman	All, 1. How mature is the CBJ planning for a 'bench' road on north Douglas, an alternative to the existing coastal North Douglas Highway? The transportation system on Douglas, and an up-to-date adopted Master Plan for the new growth area at northwest Douglas should lead decisions on location of a north Douglas crossing location and the type of crossing. 2. Please give preference to: *crossing locations outside of the Mendenhall Wetlands State Game Refuge area, *environmentally significant areas and wildlife habitat such as Fish Creek. 3. How do we encourage energy efficiency in transportation with this new option? Priority to high occupancy systems (like the bus), provide for bicycles, provide for pedestrians including transfer stations to board the bus at each end of the new crossing. Thanks for your consideration,	Good morning Ms. Waterman, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments and questions with the project team and added you to the project contact list. Best regards, Morgan McCammon Additional Response Good afternoon Ms. Waterman, Thank you for the thoughtful questions and insights. The project team will consider your suggestions. A bench road is one of the alternatives that the public asked to be considered during the Juneau Douglas North Crossing PEL Study to address traffic and safety concerns along North Douglas Highway. Previous studies and existing plans were considered for this study. A summary can be found on the project website: http://www.jdnorthcrossing.com/documents/JDNC_Previous_Studies_Summary_Report_FINAL.pdf The CBJ planning department should be able to tell you about the status of any ongoing planning efforts. Environmental conditions and baseline data are part of the review criteria for any potential crossing location. This PEL study will broadly evaluate alternatives to screen out any that do not meet certain requirements and/or criteria comprised of,	10/3/2022	M. McCammon	

			among other things, the impacts to the natural environment. Your suggestions for public transit are great. North crossing alternatives under consideration include facilities for pedestrians and bicycles. CBJ and Capital Transit would be good places to advocate for energy efficiency transportation in the Juneau area including on any potential future routes. Additional information about the PEL Study can be found on the website at www.JDNorthCrossing.com. Please reach out any time with further questions and input. Best regards, Morgan McCammon			

10/5/2022	Tom Gill	Nina Well I tried for about 40 minutes to find your office. I knocked on a lot of doors Tlingit Haida etc. The scary part is no one has heard about the DOWL group Even scarier no one knew anything about a second crossing. Maybe CBJ wants to surprise the town It's all so secretive Thank Tom	Hi Tom, I am sorry you were not able to find our office location. The address is 9085 Glacier Hwy, Suite 102 (ground floor). We are located next to Lyle's & Jensen's Home Furnishings. There are two ways to get to it. 1) From Glacier Hwy heading west, go past the home furnishings store and take a left right after the building. 2) From Jordan Ave, the driveway to the DOWL parking lot is just south of the home furnishings store (our parking lot is right behind the furniture store). Please see the pictures below to help you find the building. There is a sign next to the building on Glacier Hwy but it can be a little tricky to find it. Please email or call Nina if you would like to schedule a meeting. Her contact information is: Nina Keller Transportation and Environmental Planner nkellerhorne@dowl.com DOWL - (907) 865-1246 | direct Thank you, Message undeliverable from both Nina Keller's and Morgan McCammon's email addresses.	10/6/2022	M. McCammon	

10/18/2022	Carole Bookless	Please accept these comments on the Crossing options: Starred ones are worth consideration. Carole Bookless Resident of South Douglas South to North - *Bright green options. Either of these are okay if the land is available but neither address the issue of what to do if Egan or North Douglas Highway are closed and residents are stuck. *Light blue, pink and purple options are all acceptable provided those who own affected property sign off. Green, green, orange and salmon are rejected because they would destroy the wetlands. Purple, yellow and pink are rejected because too close to the airport. *Light purple and orange are okay if they go through the industrial area near Don Abel. This might make sense for large trucks from a new port on the west side of Douglas to get to mainland quickly on bigger roads. This would affect fewer Douglas and mainland residential properties. Property owners need to agree. Green, green, blue, orange and pink at Engineer's cut off are definitely rejected. The people who built homes here did not buy them to be on a busy industrial road. What is the point to driving that far north of the main population base? Natural areas would be negatively impacted.	Good morning Ms. Bookless, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current progress, preliminary alternatives, and initial screening criteria. Best regards, Morgan McCammon	10/19/2022	M. McCammon	

10/18/2022	Greg smith	Hello. Thanks for this. I just wanted to let you know none of the website links work in the email. Greg Additional Comment Thanks, Morgan. I should have thought to try from my phone - it worked there. None of the links are working from my state computer, so maybe it is an issue confined to this network. Anyways, thank you. Greg	Hello Greg, I apologize that you are experiencing difficulty with the links. Here is the link to the project website: https://www.jdnorthcrossing.com//index.html. If clicking on it does not work, please copy and paste it into your browser. Please let me know if you have any questions or comments about this study. Best regards, Morgan McCammon	10/18/2022	M. McCammon	

10/18/2022	Tom Gill	How come the Juneau public is kept completely in the dark about any of the proposed crossing sites You continually show the “area” but have never mentioned or posted a single site It’s a good thing that this crossing business will die on the vine as you have not followed the disclosure procedure outlined years ago and it will be Legally challenged and defeated for failure to properly inform This new crossing is fueled by an outside group for a crossing to open up development on West Douglas It has absolutely nothing to do with emergency access. If that was the case a Chunnel would already have been built 15 years ago where the traffic needs dictated the location site This is for personal greed not safety How come there is nowhere in town where you can obtain any realistic Proposal. You refer to websites that contain nothing but dates about the next meeting This is very very sad and unfair And just not above board. Get your head out of the sand and start being honest Tom Gill Additional response Morgan	Good afternoon Mr. Gill, Thank you for your input. The crossing ideas that the team has heard so far are on the project website https://www.jdnorthcrossing.com/. Here is the direct link to the ideas: https://www.jdnorthcrossing.com//documents/Ideas%20for%20crossing%20locations.pdf Meeting information, including presentations and meeting summaries can be found on this page of the project website: https://www.jdnorthcrossing.com//meetings.html I have attached the newsletter that was recently sent out. Please reach out by phone or email if you would like to talk with someone about specific concerns. Morgan McCammon	10/18/2022	M. McCammon	

		Thank you ver much. But I give up Those links go no where. And there is no accessible information in writing about discussions. There is a link with a map with 8 colored lines on it and that's it. No names of locations You must have magic links or know a code. I think accessibility is deplorable Tom Gill				

10/19/2022	Alex Wertheimer	Is the meeting open to the public who are not on the Committee. Alex	Good afternoon Alex, In order to receive input and perspectives from a variety of stakeholders, we encourage each group to have one primary representative contributing to the discussion on the Stakeholder Advisory Committee. We encourage the primary member to share materials with their respective groups, gather feedback to bring to the discussions, and to share outcomes. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801) to provide an opportunity for the public to learn about the current progress, preliminary alternatives and initial screening criteria, and share thoughts and concerns with the project team. More information on the study can be found at www.JDNorthCrossing.com. Please reach out to me or another study team member if you would like to discuss this further. Best regards, Morgan McCammon	10/19/2022	M. McCammon	

10/19/2022	Cody Salter (Stakeholder Advisory Committee Member)	My comment on the North Douglas Crossing is simply that the only true logical place to cross to North Douglas if you consider environmental and cost is to cross at the Vanderbilt intersection creating a Causeway the same way it was created to make Egan drive using riprap and dredged up silt. Of course a bridge would be required in the middle to allow the channel to still be used unfortunately a large house has been constructed in the past year or so in the ideal landing spot on the North Douglas side but the road could land a little north of that site. Some people think that isn't far enough out the road but in reality it allows the people living on North Douglas access to the valley with relatively short drive and get you very close to Eagle crest when coming from the valley and like I say it would be a very economical and environmentally friendly crossing but of course you can't keep everybody happy. Since Vanderbilt intersection has a working traffic light it would be very simple to add merge lanes and then it would be simple to add a roundabout on the North Douglas side of course all of this makes too much sense. Eric "Cody" Salter	Good morning Cody, Thank you for your interest in the Juneau Douglas North Crossing PEL Study, your comments on a crossing location, and rational. I have shared your comments with the project team. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current progress, preliminary alternatives, and initial screening criteria. Please share this information with your neighborhood association and circle. We hope to see you at the Stakeholder Advisory Committee on November 17 and discuss your thoughts and concerns further. Best regards, Morgan McCammon	10/20/2022	M. McCammon	Stakeholder Advisory Committee - Meeting 2

10/19/2022	Tom Gill	Morgan thank you soooo much for the links that actually work.! I was getting frustrated Thanks for putting up with my snarky remarks. I could not locate the DOWL office. Your assistant new to town said it was in an alley behind a furniture store After 53 yrs in Juneau I decided it was Jensens. A dozen store fronts later only 1 person had heard of DOWL and only 2 knew about a second crossing 😳! I would say 2 out of 5 people in Juneau are aware that a PEL study is going on. Big time need in the PR area! I housed many of the 1984 Study people It was fascinating maps fact sheets all over my house. It's interesting to look back with a 40 yr perspective At that time the clear choice was 3 East Sunny point because there were no neighborhoods You have an incredible task in front you The big question or dilemma is is for emergency egress or to plunder West Douglas. As a retired first responder I would say they favor a Chunnel @ sites 5 and 6. If you want to plunder options 7 -12 you will have so many EIS hurdles not too mention hunters and fisherman won't allow it. But if this was NJ and you want to develop (and don't care if it's practical Then go full Monty with option 14 As they said in '84 this train is leaving the station … do it 10 yrs or not at all! And in '97 The time to begin is now I don't think this will happen in our life time The financial estimates are not even realistic. $10 mill for a bridge? They can't even build a city hall for $35 Best of luck and thanks again Tom Gill Additional Comment Morgan	Good morning Tom, We are glad you were able to get to the information. Thank you for the substantive comments, I have shared them with the project team. Please consider attending the Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier Street, Juneau, AK). We will be sharing information about the current study progress, preliminary alternatives, and initial screening criteria. Word of mouth is a preferred way to hear about these kinds of events, so please share this opportunity with your circle. Best regards, Morgan McCammon	10/24/2022	M. McCammon	

		Thank you notifying me of the 12/12 open house. That's exactly whats needed - now! Unfortunately I will be out of town. But I will spread the word. Might I suggest also a large back page Friday 12/9 Empire Advertisement. I think you need to target the population that will be affected . Especially North Douglas Hwy, Sunny pt, Mendenhall Peninsula with some fliers. Involve KTOOPerhaps film some break out groups or at least capture a 10 minute summation of current status Best of luck. Tom Gill				

10/20/2022	Ron Somerville	Morgan, I pulled this info from the Internet pertaining to the Mendenhall wetlands. Twice I have raised the importance of this area to Alaska's fish and wildlife but the importance of protecting the area and minimizing the impacts of the crossing have not been recognized by the process. I think this is a major mistake on the part of the Department and those leading this effort. If you carefully examine the opposing position to the last crossing proposal you will find that damage to this small refuge was a major issue on the part of Juneau residents who opposed the proposal. Once again, I am requesting that one of the major objectives of this effort has to be minimizing the impacts on the refuge. Even those the acreage of this refuge are relatively small, because of the topography and availability of wetlands in SE Alaska, every acre becomes extremely critical to migrating birds in particular. Think this over and get back to me if you are able. If it is possible, we can meet with you at a time available to you and us. Thank you. Ron Somerville https://www.audubon.org/important-bird-areas/mendenhall-wetlands	Team met with Mr. Somerville and the MWSG on 11/17/2022 to discuss concerns	11/17/2022		Stakeholder Advisory Committee - Meeting 2

10/20/2022	Teri Tibbett, BBNA & Douglas Advisory Board	Hi Morgan…Thanks for sending this out! I'm currently out of the country and won't be in Juneau on November 17. Is there a way to participate remotely? Thanks, Teri	Good morning Teri, We will not have a remote option for this meeting. You are welcome to designate an alternate from both the Bonnie Brae Neighborhood Association and Douglas Advisory Board. Please let us know who those individuals would be. We will forward the invitation and meeting materials. Thank you, Morgan McCammon	10/21/2022	M. McCammon	Stakeholder Advisory Committee
10/24/2022	Emily Palmer	Please consider a second crossing between Douglas and Juneau at the Vanderbuilt intersection! A crossing here would not require another light or intersection on Egan! It could be a similar set up as the current bridge with a light on the Juneau side and a round about on the douglas side. Only having once access point for all of douglas has the potential of becoming a major disaster if the current bridge were ever to be out of service for a large amount of time. In my 8 years of living on Douglas, I recall the bridge being hit by a barge or boar at least once a year, often 2 or more times a year. It is scary to think that we are only one boat strike or earthquake away from being cut off from Juneau for months or years! A second crossing would increase safety and security for all of Douglas. It would also have the potential of being able to develop more land on Douglas for housing, which is something that CBJ desperately needs. We could also potentially look at developing a deep water port on the back side of Douglas that is currently unrealistic due to the distance to transport items from the back side to	Good morning Ms. Palmer, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current progress, preliminary alternatives, and initial screening criteria. Best regards, Morgan McCammon	10/25/2022	M. McCammon	

		other locations throughout Juneau. Please build a second crossing!!! Sincerely, Emily Palmer				
10/24/2022	Teri Tibbett, BBNA & Douglas Advisory Board	Hi Morgan… Ed Schoenfeld, Douglas Advisory Board vice-chair (cc'ed here), has agreed to attend the November 17 meeting on behalf of the Douglas Advisory Board. I'm still working to recruit someone from the Bonnie Brae Neighborhood Association! Please include Ed on correspondence for that meeting. Thank you! Teri	Good morning Teri and Ed, Thank you for sharing this. Ed - We appreciate your willingness to participate on the committee on behalf of the Douglas Advisory Board. I will forward the invitation to you. Please reach out if you have any questions. Best regards, Morgan McCammon	10/24/2022	M. McCammon	Stakeholder Advisory Committee

10/24/2022	Teri Tibbett, BBNA & Douglas Advisory Board	Hi again! Karen Larsen, co-chair of the Bonnie Brae Neighborhood Association (cc'ed here), has agree to participate in the November 17 meeting as well. Please include her in the correspondence as well. Please keep me in the thread so I can follow along. Thanks everyone! Teri	Thank you Teri and Karen. We look forward to talking with you on Wednesday. Just to confirm, you are looking for a presentation briefly updating the Association on the study progress and focusing on ways people can get involved in the process. Please let me know if you have other expectations. Teri - I will include you on all meeting documents. Karen - We appreciate your willingness to participate on the committee on behalf of the Bonnie Brae Neighborhood Association. I will forward the invitation to you. Please reach out if you have any questions. Best regards, Morgan McCammon	10/24/2022	M. McCammon	Stakeholder Advisory Committee
11/9/2022	Ketih Hermann	See attached for another crossing idea and commentary. Hoping you find this useful. Thanks, Ketih Hermann See comment dated 11/9/2022	Good morning Mr. Hermann, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments and suggestion with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current progress, preliminary alternatives, and initial screening criteria. Best regards,	11/10/2022	M. McCammon	

11/20/2022	Robin Paul	As a 45 year plus resident of N Douglas, I have followed with great interest the decades long discussions regarding the N Douglas second crossing. Safety and emergency issues are my primary concerns, and I do firmly believe the Sunny Point interchange would best address this issue because it is the most viable and fastest build-out location. Sunny Point already has a lot of the needed infrastructure in place; the distance to the island is one of the shortest routes; it is a viable location as far as environmental issues; it has been identified and studied as an option many times in the past; and most importantly, it would be the fastest and most economical location to built. Furthermore, access to this crossing would be via an existing well-maintained and well-lit major road with little neighborhood impact as opposed to 2-lane roads in neighborhoods or roads that would need substantial improvements to accommodate anticipated heavier traffic. People may say that the Sunny Point location is too close to the current bridge; however, I would argue that any other location would delay into infinity there ever being a second crossing because of all the added span distances, environmental issues, costs, and construction EIS studies. Importantly, the existing interchange at Sunny Point is a major feather-in-the-cap consideration since off/on ramps are already established. The sooner a crossing is built would address our looming safety and emergency access issues, provide Douglas Island residents an alternative route to the valley/ airport areas thereby lightning the congestion on the existing bridge, shorten the	Good morning Robin, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments and suggestion with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current progress, preliminary alternatives, and initial screening criteria. Best regards, Morgan McCammon	11/21/2022	M. McCammon	

		drive time to Eaglecrest Ski area for valley users, help jumpstart new development of N Douglas commercial and residential areas, and assist in getting more access to recreational activities for all Juneauites. I want a second crossing built and I strongly support Sunny Point as the best location. Thank you!				

11/22/2022	Karen Larsen, BBNA	Requested the map showing right-of-way for the potential bench road. Additional response Thank you Morgan, I found the answer to my question on map J. I was curious about the potential alignment of the bench road because one of the maps showed it joining nd hwy on top of Neilson Creek. It is hard to see on the map where the recreational designation ends in the area behind Bonnie Brae but I can see that the stream is protected and that it runs close to the lower homes on wee burn dr. It looks like the potential bench road would not come through our neighborhood or be adjoining existing residential property there. Thank you for getting back to me on this. I will share this info with our neighborhood association. Karen	Good afternoon Karen, Thank you for attending the Stakeholder Advisory Committee meeting last week. I know you requested the map showing right-of-way for the potential bench road. Steve misspoke when he called the area right-of-way. This potential bench road is referred to in the Juneau Comprehensive Plan (CDD – Comprehensive Plan 2013 – City and Borough of Juneau) as the "Douglas Bench Road Corridor" and is described as a "potential arterial with no specific alignment." Please call if you would like to discuss this concept or anything else. Best regards, Morgan McCammon	11/21/2022	M. McCammon	Stakeholder Advisory Committee - Meeting 2
11/22/2022	Sen. Jesse Kiehl	Is it possible to look further at the bench road concept in the context of the no-build alternative? I fear the PEL will face a lot of public pushback—as an incomplete look at the problem—if a bench road doesn't get some look. Thanks, Jesse	In-person meeting with Senator Kiehl on November 30, 2022 (Nina Keller in person, Steve Noble called in) Items discussed: - PEL study status - Upcoming meetings - Past discussions regarding a second crossing	11/30/2022	N. Keller, S. Noble	Stakeholder Advisory Committee - Meeting 2

12/3/2022	Steve Bradford	I don't support building a second crossing. There really isn't a social or economic purpose requiring a second crossing. However, if it is determined by political powers that a second crossing is needed, then I think the best location would favor placing the crossing as far north as possible. Specifically, I would recommend a new road be built down the ridgetop of the Mendenhall peninsula to tidewater at Fritz Cove and a bridge built across Fritz Cove landing in the vicinity of the North Douglas boat launch ramp. This could serve a dual purpose: 1) a second crossing to facilitate development of North Douglas and the backside of Douglas Island and; 2) offering needed shore protection via bridge approach fills to facilitate boat harbor infill development north of the Mendenhall Bar. Thank you for this opportunity to comment.	Good morning Mr. Bradford, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments and suggestion with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current progress, preliminary alternatives, and initial screening criteria. Best regards, Morgan McCammon	12/5/2022	M. McCammon	

12/4/2022	Bill Leighty	Friends, I was unable to leave a comment at project website; button didn't work. Please have available for the 12 Dec open house discussion: • One or more maps of the north half of Douglas Island so we can contemplate the complete transportation access system for improved access to all of the north half of the island, showing: o Developable land, by ownership, on west side of Island; o Likely end of road in Hilda Creek area; o Eaglecrest lodge • A 100 year chart of predicted North Crossing area "isostatic rebound", i.e. "post-glacial uplift" (or range thereof) and of predicted sea level rise (SLR) (likely range), both with REF to present MLW datum. Show inundation progress as SLR overtakes isostatic rebound. • Geologic cross section of the alignments from about Super Bear IGA to one mile up Eaglecrest Road, so that we may understand the potential for a tunnel connection (a) under the airport runway and (b) under the SE end of runway 28 Thank you. Bill Leighty Director, The Leighty Foundation (TLF)	Good morning Mr. Leighty, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We are working on gathering the information you have requested. We look forward to discussing these issue with you at the Public Open House on Monday, December 12. Best regards, Morgan McCammon	12/7/2022	M. McCammon	

12/7/2022	Debbie White, Broker/Owner	As a former first responder who started with the Douglas Volunteer Fire Department, I feel a second crossing will save lives. The fire station on Douglas Island is not staffed, and there is no ambulance in that fire hall. Any number of incidents could leave Douglas Island without emergency services. Having one bridge to service nearly 1/3 the residents of the City & Borough of Juneau is an unreasonable expectation that nothing could go wrong. We were extremely fortunate that when a barge hit the bridge in August of last year there was not significant damage. About the same time the year before the bridge was also struck by a barge. The third time could be a charm. In addition, Juneau has a housing problem, and has had one for decades. My parents moved to Juneau in 1970 and left me with relatives until they could get settled. It was December of 1974 before I got to live with my parents again. Our community is about 32000 people. There are currently 26 single family homes and two attached homes on the market. Six of those single family homes are still under construction or not even started yet. The City & Borough of Juneau spent significant taxpayer funds to extend water and sewer services to North Douglas Highway because that is where the bulk of available, relatively easily developed land exists within the borough. Zoning changes are already taking place and developments planned for the area. This will only further increase the need for a second crossing. The wetlands, as they exist, will be fine. The bird population withstands pressures from a busy international airport as well as hunting, dog walking, and significant traffic parallel to the wetlands on both sides.	Good morning Ms. White, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We have received both emails with your comments. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team. Best regards,	12/7/2022	M. McCammon	

		If no action is taken towards building the actual bridge, more funds will be squandered with even more studies until isostatic rebound allows us to build a road instead.				

12/7/2022	Debbie White, Broker/Owner	As a former first responder who started with the Douglas Volunteer Fire Department in 1990, I feel a second crossing will save lives. The fire station on Douglas Island is not staffed, and there is no ambulance in that fire hall. Calls to Douglas are automatically mutual aid, meaning the Juneau station and volunteers respond. Mid-day calls are especially problematic because most of their volunteers work on the mainland. Any number of incidents could leave Douglas Island without emergency services. Having one bridge to service nearly 1/3 the residents of the City & Borough of Juneau is an unreasonable expectation that nothing could go wrong. We were extremely fortunate that when a barge hit the bridge in August of last year there was not significant damage. About the same time, the year before, the bridge was also struck by a barge. The third time could be a charm. In addition, Juneau has a housing problem, and has had one for decades. My parents moved to Juneau in 1970 and left me with relatives until they could get settled. It was December of 1974 before I got to live with my parents again. Our community is about 32000 people. There are currently 26 single family homes and two attached homes on the market. Six of those single family homes are still under construction or not even started yet. The City & Borough of Juneau spent significant taxpayer funds to extend water and sewer services to North Douglas Highway because that is where the bulk of available, relatively easily developed land exists within the borough. Zoning changes are already taking place and developments planned for the area. This will only further increase the need for a second crossing.	See response above			

		The wetlands, as they exist, will be fine. The bird population withstands pressures from an international airport as well as hunting, dog walking, and significant traffic parallel to the wetlands on both sides. I'd imagine many birds would use the bridge as protection from the elements, or as a high platform for hunting like they do up and down Egan Drive. Thank you for your time and consideration.				

12/7/2022	Denny DeWitt	I would like to indicate my strong support for the North Douglas Crossing. A second connection to Douglas Islandhas been studied since the 1980s. The previous studies highlighted several reasons for a north crossing; they are even more critical today: • Congestion on the existing Douglas Island Bridge and North Douglas Highway is a traffic hazard all year long. • The health and emergency safety of Douglas residents is compromised by having only one point to cross the channel to the mainland services. • Emergency services can be limited if the current bridge or other points along Douglas Highway are blocked. • Juneau has a continuing housing shortage. One of the keys to helping provide additional housing is to open up residential land. It will also open up land that Juneau can use for commercial, industrial, and port development -- all of which are in short supply. Thank you for considering my support.	Good afternoon Mr. DeWitt, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team. Best regards, Morgan McCammon	12/7/2022	M. McCammon	

12/7/2022	Jim & Jackie Triplette	Attention: Marie Heidemann, DOT&PF Project Manager Nina Keller, Assistant Project Manager Irene Gallion, CBJ Liaison Please see the above attachment for our 2nd Channel Crossing comments, preferred routes, pictures 1 – 4, Notes from the Audubon Society Stakeholder meeting and the Sunny Point Neighborhood Association comments. Thank you for your consideration of our concerns, comments and preferred routes for the 2nd Channel Crossing. Jim & Jackie Triplette See attachement dated 12/7/2022	Good morning Mr. and Ms. Triplette, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We appreciate the historic comments on the previous efforts. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team. Best regards, Morgan McCammon	12/7/2022	M. McCammon	

12/7/2022	Peggy Ann McConnochie	A second connection has been studied since the 1980s but has yet to progress beyond identifying and recommending preliminary alternative alignments. The previous studies highlighted several reasons for a north crossing; they are even more critical today: • Congestion on the existing Douglas Island Bridge is a traffic hazard all year long. • The safety of users and concerns over emergency responses, whether fire or ambulance, in the event of a bridge closure, due to an accident on the bridge or to the bridge structure itself. • Juneau has a continuing housing shortage. One of the keys to helping provide additional housing is to open up residential land. It will also open up land that Juneau can use for commercial, industrial, and port development -- all of which are in short supply. These concerns still exist. They are valid reasons why another channel crossing is needed now. Additional Comment Thank you, Morgan. I am aware of the Monday gathering. Unfortunately we are unable to attend. That is why we wanted to make sure you received our comments.	Good morning Ms. McConnochie, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team. Best regards, Morgan McCammon	12/7/2022	M. McCammon	

12/8/2022	Dave Ignell	Morgan, will your meeting on Monday at JACC be accessible via Zoom or Google Meet for listening and comments? Thanks, David	Good morning Mr. Ignell, The Public Open House will be in-person on Monday, December 12, at the Juneau Arts and Culture Center. There will be an online questionnaire that includes materials presented posted to the study website, https://www.jdnorthcrossing.com/, tomorrow. If you are unable to attend the meeting in-person, this is the best way to review the materials and submit feedback. This questionnaire will be open until January 20, 2023. Best regards, Morgan McCammon	12/8/2022	M. McCammon	
12/9/2022	Allen Shattuck	I strongly support a second crossing for several reasons. First is the safety aspect since there is no way for emergency vehicles to respond to Douglas Island if the bridge is closed for any reason and a prolonged closure would leave Douglas Island residents with no way to get back and forth to Juneau. Second is the convenience and reduction in pollution aspect. For people in the valley that want to ski Eaglecrest and for people on North Douglas that need to go to Lemon Creek or the valley, the second crossing will substantially reduce travel time and therefore also reduce vehicle emissions. In my opinion, the most logical crossing point is from Sunny Point as proposed in the most recent study. A crossing at this location would provide the most savings in travel time for the most people and should also be able to utilize the current Egan Drive overpass.	Good afternoon Mr. Shattuck, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team. Best regards, Morgan McCammon	12/9/2022	M. McCammon	

12/9/2022	Bob Deering	I tried to respond to your survey but got a "database error". Rather annoying because I spent a considerable amount of time crafting my response. Not a great start...	Good afternoon Mr. Deering, Thank you for bringing this issue to our attention. The link has been corrected. Please try again here: https://www.surveymonkey.com/r/DXGV3M6. We apologize for the inconvenience. Best regards, Morgan McCammon	12/9/2022	M. McCammon	
12/9/2022	Bruce Griggs	To whom it may concern, I believe the second crossing, if built somewhere in the vicinity of fish creek road, is a mandatory project which will help insure the safety of Douglas residents and the future economic health of the entire community.	Good afternoon Mr. Griggs, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team. Best regards, Morgan McCammon	12/9/2022	M. McCammon	

12/9/2022	Cordova Pleasants	Dear Reader, I'd like to add an additional letter of support for this project. The time is now to act and construct! Everyone in Juneau would benefit greatly from this second crossing simply by creating access. Juneau would see an increase in property value for N Douglas neighborhoods, promote residential development, improve Eaglecrest participation (it's possible to cut out as much as 30-40minutes of driving time!), trail access, reduce commutes and emissions, and promote future industrial development for the backside of Douglas and deep water port. There's no doubt the new crossing would have just as much traffic as our ONLY crossing! Please push this project through and get Juneau more connected, unified, and create a stronger Capital City through infrastructure! Best,	Good afternoon Ms. Pleasants, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team. Best regards, Morgan McCammon	12/9/2022	M. McCammon	
12/9/2022	Corey Baxter	Hi, I totally support the North Douglas crossing. I believe it will help with alternate access for emergency vehicles, alleviate traffic on North Douglas and Egan Drive, bring more revenue to Eaglecrest, and will provide more areas of future development and will help bring growth to our community. Thanks	Good afternoon Mr. Baxter, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team.	12/9/2022	M. McCammon	

			Best regards, Morgan McCammon			
12/9/2022	greg capito	Just say no to this unnecessary project!	Good afternoon Mr. Capito, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/9/2022	M. McCammon	

12/9/2022	john brown	I'm in favor of the crossing to the Mendenhall Peninsula. It may not look that good to the downtown people, but in the long term a crossing in that area will provide opportunities for the community to grow and it will relieve pressure on the City Center. jb	Good afternoon Mr. Brown, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team. Best regards, Morgan McCammon	12/9/2022	M. McCammon	
12/9/2022	Judy Ripley	My husband and I believe Erroll Champion pursued a second crossing for the Chamber of Commerce probably in the 1960s for all the reasons you lay out. It was a good idea then and now. Back in the day when Channel Marina burned down the area was closed to traffic for a time with no option for reroute. I believe in this project's need if funding is available!	Good afternoon Ms. Ripley, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team. Best regards, Morgan McCammon	12/9/2022	M. McCammon	

12/9/2022	Lyndsey Zeller	I am in support of a second crossing between Juneau and Douglas. It's overdue and the lack of it decreases my venturing over there. Lyndsey Zeller	Good afternoon Ms. Zeller, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. We will be hosting a Public Open House on Monday, December 12, 2022, 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). Come learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback with the team. Best regards, Morgan McCammon	12/9/2022	M. McCammon	

12/12/2022	Beth Weldon	The choice through the peninsula (purple) makes a larger transportation corridor. As development happens in North Douglas, the bigger circle will be more efficient than the smaller circles. Also it would open up city property on the peninsula and make more land available for housing.	Ms. Weldon, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Talli Vittetoe Additional Response Hello Mayor Weldon, Thank you for attending the Public Open House on Monday, Dec 12. The study team appreciates you being there and offering your feedback. We understand that you had some questions regarding the PEL Study's Purpose and Need Statement. For projects and studies led by the Department of Transportation, Purpose and Need Statements are required by the Federal Highway Administration to be transportation specific. The Additional Goals section is how we are able to incorporate elements that are non-transportation values and concerns of the community. Please let us know if you would like us to reach out to your office to schedule a meeting with you and a member of the study team to discuss this or any other aspects of the PEL Study further. We appreciate how involved the City and Borough of Juneau has been in the process so far and would like to continue that collaboration. Best regards, Steve Steven Noble, PE	12/15/2022	T. Vittetoe, S. Noble	OH#2

12/12/2022	Brenda Taylor	I am most swayed by a plan that will make more affordable housing available in Juneau. I was very interested in and influenced by Senator Kiehl's explanation/ proposal. Re: bringing sewer to area between N Douglas and Bay View so that housing density could be increased there. That is far more convincing than opening up areas in W. Douglas for housing for rich folks. I understand that the bench road is a sperate project and from everything I have heard so far, it seems very worthwhile. That said, I would want to find a way to cross (at Sunny Point of Salmon Creek or closer to bridge). That has minimum impact on and maximum input from the people leaving adjacent to the new bridge. I'm also curious about (low income) residents of Lemon Creek and how to ensure that they are involved in this process. Could you go directly to them to ask for their input? Similarly, how are the native community adn tribal governments being involved? Both re: their role as landowners in N. Douglas, and their advice about how to connect with native community/ residents.	Ms. Taylor, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Talli Vittetoe	12/15/2022	T. Vittetoe	OH#2
12/12/2022	Dennis DeWitt	Strongly support. Preference is Mendenhall Peninsula. Opens development- commerce. Opens housing opportunity. Emergency access when the road is blocked as recently on Egan. Having added access is a public safety issue.	Mr. DeWitt, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Talli Vittetoe	12/15/2022	T. Vittetoe	OH#2

12/12/2022	Don Habeger	First, I support another mainland/ Douglas Island crossing. Completion of a project is significant for Juneau's future. Second, a western project is preferred. The farther from the current bridge the more advantageous for saftey and commerce concerns. Third, a cost effective project is preferred but secondary to a western location. This is a balance between better community traffic flow, commerce enhancement, and overall cost.	Mr. Habegar, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Talli Vittetoe	12/15/2022	T. Vittetoe	OH#2
12/12/2022	Freda Westman	No second crossing is needed. The only congestion I have ever seen at the bridge is the Independence Day festivities in Douglas after the downtown parade. It is unnecessary. If the people that will benefit from the deep water port want to build a crossing it should be them buying the property and funding this. I built my home 25 years ago after purchasing the property and my home is dear to me. The peace I find there is everything to me. Tlingitaani is my homeland. How about first building up infrastructure on N Douglas Hwy before proceeding further with the crossing? No one past a certain point, maybe mile 3, has city sewer. Shouldn't that be taken care of first? How about widening the highway and putting bike paths? Shouldn't that be taken care of first? This process shouldn't be by populat vote because is that the best idea? Are you working with Central Council of Tlingit and Hailea Indian Tribal and Douglas Indian Association?	Ms. Westman, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Talli Vittetoe	12/15/2022	T. Vittetoe	OH#2

12/12/2022	Joseph Roth	I do not feel that there is a need for a second crossing - an absolute waste of money from tax payers. We have consistent days where we have no air access and yet no one is saying build a second airport out Eagle Beach for services. The days of building stuff just because we can should end and we should think about what we really need long term for a community not based on what the Chamber thinks.	Mr. Roth, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Talli Vittetoe	12/15/2022	T. Vittetoe	OH#2
12/12/2022	Mandy Cole	Vanderbilt connection seems to balance wetlands impacts, minimize airport impacts, and contruciton costs.	Ms. Cole, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Talli Vittetoe	12/15/2022	T. Vittetoe	OH#2
12/12/2022	Margo Waring	North Douglas - bad idea: Destroy Fish Creek Park and salmon run and businesses about fishing. Bad ideas. Also mountain top removal put homes in jeopardy. Like Sunny Point alternative or Vanderbilt Hill.	Ms. Waring, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Talli Vittetoe	12/15/2022	T. Vittetoe	OH#2
12/12/2022	Mark Brown	The J-D crossing important for public safety. This is very important.	Mr. Brown, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Talli Vittetoe	12/15/2022	T. Vittetoe	OH#2

12/12/2022	Ron Flint	The accident on Egan last week demonstrated another need for the crossing. Alternate routes when Egan is closed. The Mendenhall Peninsula route makes the most sense to me.	Mr. Flint, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Talli Vittetoe	12/15/2022	T. Vittetoe	OH#2
12/12/2022	Abram (EpiicPenguin) Leigh	PUBLIC OPEN HOUSE #2 Monday, December 12, 2022 | 4:00-6:00 PM did the meeting ever go live on zoom or in person? is/will there be a recording to watch?	Good afternoon Abram, Thank you for your email. Today's meeting is an in-person Public Open House from 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). It will be an opportunity to meet the study team and to learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback. Click https://www.jdnorthcrossing.com//outreach.html to view the meeting materials shared at the Public Open House today. Kind regards, Jovie Garcia	12/12/2022	J. Garcia	
12/12/2022	David Summers	AKDoT JD North Crossing, I fully support a second crossing to Douglas Island to be constructed now. TO BE CONSTRUCTED NOW is the main point! Juneau cannot afford to miss this opportunity now to construct the second crossing. North of the airport is my primary preference, or Sunny Point but not south of Sunny Point, then it	Good morning Mr. Summers, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/13/2022	M. McCammon	

		would just be too close to the other bridge. Thank you - David				
12/12/2022	Frank Bergstrom	Dear Dowl, CBJ, State of Alaska; It is with great regret that I was unable to attend tonight's public meeting. Nonetheless it is my pleasure to submit the following points for your consideration. 1. A second crossing is needed for safe access to or from Douglas Island in the event the current bridge is rendered unsafe for whatever reason. 2. Fuel, cargo, groceries, and goods and persons of all sorts transiting between Douglas Island and the remainder of Juneau must travel over the existing bridge. Due to a lack of travel options, this adds cost to all such goods. 3. Sporting and recreational activities, which are enjoyed on Douglas Island by the valley population must travel south to the existing bridge and then back north again. This adds expense, consumes fuel, and limits opportunities. 4. The birds on the Mendenhall Wetlands will survive and in-fact may benefit from a second crossing as hunters would be restricted within the road corridor. 5. ADFG, FWS, and NMFS biologists manage the birds on the wetlands and there is little reason to believe unmitigatable impacts to the refuge would occur due to the second crossing. I hunt the	Good morning Mr. Bergstrom, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/13/2022	M. McCammon	

		wetlands many many days each year. We can live with a second crossing. 6. The CBJ has spent millions of dollars on the pioneer road located near the end of North Douglas Highway. The purpose of the pioneer road is to promote development on Douglas Island. The second crossing is integral to ever realizing that ambition for which the populus has already invested so heavily. 7. I and a partner own a parcel on north Douglas Island. If it were instrumental in aiding development of a second crossing, it would be my pleasure to offer this property at rock bottom price - if not for free. Regards,				
12/12/2022	greg capito	This project is not necessary and a waste of money. Put the brakes on the planning process now.	Good morning Mr. Capito, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Best regards, Morgan McCammon	12/13/2022	M. McCammon	

12/12/2022	Malcolm Menzies	Ladies & Gentlemen, The crossing is needed for growth and much more . I favor a crossing at the Lemon Creek intersection. It requires one brigade (it is slight) and slopes that are flat and reflect a crossing within the flats. Sincerely ,	Good morning Mr. Menzies, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Best regards, Morgan McCammon	12/13/2022	M. McCammon	
12/12/2022	Nathan Leigh	Your zoom link for the public meeting is not working Nathan	Good afternoon Nathan, Thank you for your email. Today is an in-person Public Open House from 4:00-6:00 p.m., at the Juneau Arts & Culture Center (350 Whittier St, Juneau, AK 99801). It will be an opportunity to meet the study team and to learn about the current study progress, preliminary alternatives, initial screening criteria, and share your thoughts and feedback. Click https://www.jdnorthcrossing.com//outreach.html to view the meeting materials shared at the Public Open House today. Kind regards, Jovie Garcia	12/12/2022	J. Garcia	

12/12/2022	Rich Brenner	Hello, I am out of town at the moment, but would really like to see the updated proposed routes and information if you could please pass that along. Thank you,	Good morning Mr. Brenner, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. The materials that will be shared at the meeting this afternoon are posted to the website here: Southcoast Region Project, Alaska DOT&PF (jdnorthcrossing.com). There is a short survey for providing feedback. Alternatively, you may send your comments to jdnorthcrossing@dowl.com. Please let me know if you need any assistance. Best regards, Morgan McCammon	12/12/2022	M. McCammon	
12/12/2022	Scott Jeffers	Thank you for the email, but it does a little good with only a few hours lead time. Unless today's date was a typo and the 17th is the real date of the open house #2. Or maybe I'm missing something. Thanks, Scott Jeffers	Good afternoon Mr. Jeffers, Thank you for your email and noting the error. The meeting was an in-person Public Open House yesterday, December 12. Please visit the website at https://www.jdnorthcrossing.com//outreach.html to view the materials shared, including the current study progress, preliminary alternatives, and initial screening criteria. We welcome you to share your thoughts and feedback through the survey or by contacting the study team at jdnorthcrossing@dowl.com. I apologize for any inconvenience. Kind regards, Morgan McCammon	12/13/2022	M. McCammon	
12/12/2022		Comment	Written comment received at Open House #2			Open House #2

12/12/2022		How do you balance the difference in votes/ suggestions coming from those that live in these areas vs. just overall Juneau, or people less affected by the bridge? You currently count all comments the same, but I think the local residents of N. Douglas and other tie in spots should get more say. How will CBJ afford additional sewage, road maintenance, plowing, and police/ fire service when N. Douglas is either developed, or more cars are using the roads leading to crashes? Will the construction be able to handle vehicle pollution in an advanced way or is it just a bridge as they all are and no innovation? Why don't we spend this money to replace Juneau culverts that are horrible for fish passage? Buy more plows, employ more people, or fund our teachers for once? This is such a waste, again.	Written comment received at Open House #2			Open House #2
12/12/2022		A design worth supporting should protect the refuge and Fritz Cove Habitat; protect the residential areas along ND history. So Mendenhall Pensinsula route should be lowest, and Vanderbilt Hill route should be highest.	Written comment received at Open House #2			Open House #2

12/13/2022	Barb Lake	Hello, After the Open House last night I had an additional thought about the project I had not considered before. It would be helpful to have a noise and light pollution study done on the bridge wherever it may end up so current residents will have an idea of what their current view will change to. I'm also wondering if the lighting that would occur on the bridge would also be installed along the N. Douglas Hwy and how traffic would be alleviated if new housing communities are built and yet the only road does not allow for much passing and the current speed limit is 45. Would these things change? -- Thank you,	Good morning Ms. Lake, Thank you for your interest in the Juneau Douglas North Crossing PEL Study and for attending the Open House last evening. I have shared your comments with the project team and am working to get answers to your questions. Best regards, Additional Response Good morning Ms. Lake, Thank you again for attending the Open House, we appreciate your input. Noise, lighting, and improvements to the road network will be assessed at a planning level during this PEL phase as required to compare and contrast alternatives. A detailed analysis of potential noise or light pollution and viewshed impacts would occur only if additional funding is available to begin the environmental documentation phase after the PEL is completed. The environmental phase would also include recommendations on improvements needed to the existing road network to accommodate a potential north crossing. Please reach out to the study team if you would like to discuss these issues further or if you have any other comments. Best regards, Morgan McCammon	12/13/2022	M. McCammon	Open House #2

12/13/2022	Hayden Garrison	Hello JD North Douglas Crossing Group, Thank you for the townhall meeting last night. I was able to hear many different thoughts on the topic and it was very informative. I gave myself a night to sleep on it before I gave my thoughts. Sorry if it gets lengthy!! Born & raised in juneau for almost 50 years. I love Juneau and will never leave. Even if they try and force me. 😊 I moved 3 years ago. I used to live down town for most of my life and I also supported the crossing back then even though it would be a wash where to use it or not because of being down town. My 1st suggestion would be to show "the water ways" part of the map that has more color or lines on them. I would love to see what the water ways look like at Low Tide, Medium-Low Tide, and High Tide. Right now, the maps look like the water way is massive at Vanderbilt to the North Airport, but they are the lowest & skinniest navigable part of the channel. This might help people understand it better. It is very deceiving. Crossings: Eagle Creek: Defiantly Not. No point to spend that kind of money and not get a big enough gain on access to ND (North Douglas) Bridge would have to be just as big as the one we have. Salmon Creek: Still No. For the same reasons as Eagle Creek. Maybe not quite as big of bridge because you are on the north/west side of the	Good afternoon Hayden, Thank you for your interest in the Juneau Douglas North Crossing PEL Study and for attending the Open House last evening. I have shared your comments with the project team and added you to the study email list. We appreciate your feedback. Best regards, Morgan McCammon	12/13/2022	M. McCammon	Open House #2

		barge area. But still no. Twin Lakes: This one still makes no sense to me and no one had any info of why here this last night. The only thing I can think of is the access on the ND side. Vanderbilt: This would be my #2 Vote: I THINK, the only possible advantage of this one over Sunny Point is that it might be out of the hunting/wetlands largest usage area. Not that matters to me, but just trying to be nice. Sunny Point / Walmart Over Pass: This would be "MY #1 VOTE". I would love to hear it called a different name and not Sunny Point. This to me makes it feel too close to sunny point and those people already are complaining enough. (Because no one likes anything in their back yard). North Airport: This is a "Non-Starter" Tunnel???? The cost and upkeep seems way too high and problematic. Mendenhall Peninsula: This seems like a pipe dream. The cost seems astronomical!! The people would never vote for the cost!! Another bridge to nowhere!! If we could not get the votes last time for a crossing because of cost, how would we do it on this extravagant one. Back to the #1 Vote at Sunny Point: Again, It really needs a New Name!! (These are all my thoughts and what I believe that I know) • This is the "No Brainer" to me. The infrastructure is already there on the Juneau side.				

		o I am open to where it hits land on the Douglas side. Not sure where is the least impactful spot. o I do understand that they will have to buy some people out of their Property/homes. I think you have to do that for many projects around as places get bigger. This is sad, but this is also life and sometimes there is no choice. ☹ • I think this gets you the biggest bang for your buck!! And possibly the highest use out of all the other crossings. • Bring water, sewer, power, phone, and internet. IT would be nice to connect the rest of Douglas to the "full" system of utilities and a backup for some systems. • As to the crossing itself. I can't see Coast Guard or army core or whoever is going to dredge again. We need to get that letter from them to say that they will not be dredging in the future. This will make the bridge part smaller and lower. o I think an Over-Sized Culvert would work just fine. Over-Sized meaning 20' high at flood tide. Almost looking like a wildlife land bridge or tunnel kind of thing. I might not be explaining that very well. § Maybe 20' is even too big. Not sure what it should be. o Seeing options would be greatly informative. o Also seeing what the costs would be for these options would be interesting and informative. § Maybe break it down. Show what the different costs would be for the bridge part. And what the cost options would be for the part for the connection from the overpass to the bridge across the wetlands. o We know there will be many more smaller culverts for the creeks and drainage. The Upper North Douglas Bench Road Project: • I do know that the upper ND bench road project is					

		not part of this. But it is nice to see it in the drawings and understand the connections to it for future use. • I think showing the bench road and the many possible connections to ND Highway is how we get more people on board so it does not feel like it is in "My/Their Back-Yard". This might show the least impact on the ND Residents and why they live out there. • With using the Sunny Point crossing, You could start building the bench road from the middle rather than the harder south end side. o Make your start straight across and then go west towards the Eaglecrest Road. I think that would be the first direction I would go. • I think that the west leg "phase 1" could be start to be built with a pilot road and contractor could start building homes or even subdivisions off of that road. I think that is all I have for now. Sorry for rambling on. I like to have lots of info and I don't mind sharing what I think. It just gets more thoughts and info out there to come up with a possibly even better plan.. I THANK YOU Again for all your hard work and help in this informative process!! :~} Thank You & Stay Safe!!				

12/13/2022	Swampy	Please send me link and pdf reader info for crossing	Good afternoon, Thank you for your email. Please visit the website at https://www.jdnorthcrossing.com//outreach.html to view the materials shared at the Public Open House, including the current study progress, preliminary alternatives, and initial screening criteria. We welcome you to share your thoughts and feedback through the survey or by contacting the study team at jdnorthcrossing@dowl.com. Kind regards, Morgan McCammon	12/13/2022	M. McCammon	
12/13/2022	Ted Quinn	To whom it may concern, As a resident of Juneau for over 50 years I have always felt a second crossing to Douglas should be achieved. Of course, for all the obvious reasons, health and safety, economic development as well as environmental. It just makes sense. I would prefer a second crossing Northwest of the Juneau airport. Either from Industrial Boulevard or over the top of Mendenhall Peninsula. And please note, I live at the end of Fritz Cove Road and have hiked the Engineers Cutoff Spur Road to Fritz Cove road trail many, many times. You can say I am not a NIMBI. Both alternatives would allow for the least amount of impact and could enhance this end of the wetlands dramatically. I would suggest the marine transit and access issues of the Mendenhall River be taken into consideration as it is a route used extensively for larger vessels needing to be pull up onto the hard for maintenance. The Smith yard is crucial and should not be blocked. As well, the dredging of the	Good morning Mr. Quinn, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/14/2022	M. McCammon	

		"bar" should be included for several reasons. Dredging to allow for better passage at lower tides for fishing, pleasure and commercial vessels as well as fill for the crossing. Similar to what you did with Egan Drive. It could be a win/win for all of Juneau if it is done correctly. Please put me down as a supporter of a second crossing. Thank you for your time.				

12/14/2022	Abram (EpiicPenguin) Leigh	mostly i am trying to answer these questions below. ---------- Why a new bridge? What does the new location serve that the old bridge does not. Is the committee expecting to build housing or business on north douglas? Will these people actually commute using the bridge or will they just use the old bridge? (Valley Housing to downtown work etc..) What is the data to back this up? IE: if housing is developed on north douglas they would have to work in the valley for a new bridge to see any traffic. and if business is developed on north douglas then they would have to work in auke bay for the new bridge to see use. if both are developed, why not just live and work on douglas/north douglas. If the question is solely about traffic, what about a Roundabout? or right turn only for Juneau side bridge intersection? It seems most traffic congestion is on the juneau side of the bridge, at the stop light. What does the traffic data say? Could the old bridge be expanded to 3-4 lanes on top and move the pedestrian and bike path underneath the bridge and connect it to the existing tourist walkway?	Good morning Mr. Leigh, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments and questions with the project team and am working on getting answers. Best regards, Additional Response Good afternoon Mr. Leigh, Thank you for your interest in the Juneau Douglas North Crossing Planning and Environmental Linkages (PEL) Study and sharing your thoughts and questions. The purpose of this PEL Study is to identify ways to improve the connection between Douglas Island and Juneau. The secondary purposes are to identify ways to improve transportation for non-motorized users and reduce transportation related energy consumption. An improved connection to Douglas Island should address the following needs: • Alternate access and transportation infrastructure resilience • Decrease traffic pressure on Douglas Island Bridge and its intersections A north crossing should also strive to meet these additional goals: • Improve connection to North and West Douglas Island by creating additional traffic capacity to support the future development of affordable housing and economic development opportunities. • Enhance and protect the public health and	12/16/2022	M. McCammon	

			safety of travelers and the communities that transportation facilities traverse and serve. • Transportation improvements should avoid, minimize, and mitigate impacts to the environment and to residential areas. • Transportation improvements should maintain the visual, cultural, and scenic identity of Juneau and Douglas Island. As part of the analysis, the study team is developing an origin-destination study utilizing four months of GPS data to model traffic patterns. We expect this analysis to be complete in February 2023. Future evaluation of detailed alternatives will include design details like possible intersection configurations. One of the preliminary alternatives is a Downtown alternative. This alternative is located next to Douglas Island Bridge and connections for both the existing bridge and the new bridge will need to be evaluated as part of the screening process. Also, a no build option is carried through the PEL study. The study team invites you, if you have not done it already, to complete our online survey (https://www.surveymonkey.com/r/DGDT6PT) to comment on the preliminary alternatives and the screening criteria. Please visit our website (https://www.jdnorthcrossing.com/) for more information. Feel free to reach out if you would like to discuss anything further or have additional questions. Best regards,			

			Morgan McCammon			

12/14/2022	Jim Dorn	Here are a few thoughts and observations: 1) The Transmission Lines Within the Study Area figure (Figure 2) didn't include any of the sewer force mains or water transmission mains that cross Gastineau Channel. 2) The Species Habitat Map (Figure 5) doesn't show the full extent of king crab habitat in Fritz Cove. Juvenile king crab are frequently caught in pots in the same area shown for dungeness crab particularly during late spring. In fact in the early part of the year there will be more juvenile king crab in dungeness pots than dungeness crab. 3) The Streams Used by Anadromous Fish Map (Figure 3) shows a small creek at about 11 mile that is shown as a "Stream Where Anadromous Species Have Not Been Documented". In 2021 I observed approximately 200 pink salmon in this stream. In 2022 there were none observed. Salmon in this stream have just not been documented by ADF&G, but they are there. I'll contact ADF&G about cataloging this stream next time I see salmon in it. 4) Each summer kayak tours leave the North Douglas boat ramp and paddle towards Fish Creek. Over the course of the summer there are literally several thousand tourists that take this tour. Should this be considered as part of the screening process? 5) During the peak of the coho and king salmon there are regularly 50 to 100 boats in Fritz Cove targeting returning salmon. Should this be considered as part of the screening process? 6) During the winter there are frequently large rafts	Good afternoon Mr. Dorn, Thank you again for your comments and questions. At this phase, the study team has pre-screened the crowd sourced ideas for crossing locations as shown on this document, Ideas for crossing locations we have heard so far (jdnorthcrossing.com). This pre-screening led to the eight preliminary alternatives shared at the Public Open House on December 12, shown here, Southcoast Region Project, Alaska DOT&PF (jdnorthcrossing.com). The study team is currently applying Level 1 screening to these eight preliminary alternatives. The two-step screening of the preliminary alternatives is based on the purpose and need statement, additional goals, and other considerations (including the natural environment, social impacts, housing, economic impacts, safety, cost, and public support). Alternatives remaining after the Level 1 screening will be considered “detailed alternatives”. Alternatives that do not pass Level 1 screening will not advance for further alternative development or evaluation. The study team is aware of the sewer force and water transmission mains crossing Gastineau Channel and will consider them during the development of the alternatives. We are also considering the recreational uses (including harvesting and tourism) within the study area. Thank you for sharing your knowledge regarding the king crab habitat, the sea lion and humpback movements, and the observed pink salmon with us. As part of this study we conducted a desktop review and used the habitat information shared by ADF&G and other agencies. Any project that might	12/14/2022	M. McCammon	

		of up to 100 sea lions in Fritz Cove along with humpback whales. Should their use of the area be considered as part of the screening process? It would be good to let the Public know where you are in the Alternative Screening Process, I am confused about where you are at in the process. One of the work products of "Pre-Screening" is "Elimination of Alternatives that are not feasible based on professional judgement and available data". So, since no alternatives have been eliminated I guess you are still in the "Pre-Screening" process. People at the December 12 open house led me to believe the next step was Level 1 Screening and that Pre-Screening was not to eliminate any alternative. Some clarification of where we are at would be good. Thanks, Additional Comment Thanks for getting back to me so quickly. I'll be looking forward to the Level 1 Analysis of Alternatives when it is ready. There are some alternatives that appear to me to be "fatally flawed" that could have been eliminated during the Pre-Screening Process. However, I understand the need to fully consider all alternatives at this early stage of the planning process. Thanks again for your quick response.	result from this study would conduct more in depth impact analyses and surveys. Please let us know if you would like to discuss your concerns further. Best regards, Morgan McCammon			

12/14/2022	Kenneth Gill	Hello JDNC, I would just like to contribute a couple of suggestions. 1. Use land that is either Municipal and/or State. 2. Select location based on widest coverage for community access. i.e: similar idea to large well planned (traffic) cities , creating an outer ring road e.g. Phoenix Highway 101. 3. The most realistic option - using Industrial Boulevard to second bridge connecting to Municipal Land on Douglas Island. I would take serious consideration in designing a bridge that would minimize the environmental disturbance to natural habit of Mendenhall Wetlands. Sincerely	Good morning Mr. Gill, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/14/2022	M. McCammon	
12/15/2022	Chuck Pilcher	Have you considered a “Gibraltar Option” for the North Douglas crossing?https://youtu.be/cItlDD_0NJk Yes, there are pros and cons and I’m not advocating for or against it, but I‘d like the assurance that the option has been considered.	Good morning Mr. Pilcher, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comment and question with the project team and am working on getting an answer. I have added you to the project contact list. Best regards, Morgan McCammon	12/16/2022	M. McCammon	

12/16/2022	Jim	Jim called noting that he was not able to attend the Open House on 12/12/2022. He asked for discriptions of the alternatives being considered. I shared the website and talked through the alternatives spefically on North Douglas. He offered the comments that his preferred alternative is a causeway with culverts for water flow extending from Industrial Blvd. He said a causeway would be the cheapest option and a bridge would be a waste of money. He said that dredging the channel would never happen but acknowledged that this would be a designation from the Federal government. I reitereated that he should visit the website for the most up to date information. He asked when the next open house would be. I shared that we would host the final open house in spring 2023.	Phone conversation	12/16/2022	M. McCammon	

12/18/2022	Rick Shattuck	I am strongly in favor of finally building a North Douglas Crossing. This project is badly needed for public safety concerns. It will improve emergency response times to much of the North Douglas neighborhood. It will provide an alternate transportation route should there be a closure of the current bridge or of Egan Drive (especially at the Salmon Creek retaining wall area). It will reduce driving distances, especially important when road conditions are poor. It will provide an alternate route for heavy transportation (trucks, buses) that create safety (and quality of life) concerns on North Douglas Highway The project will also increase access to and from North Douglas. This will enhance recreational opportunities for much of the community. It will improve transportation efficiency, and it will improve access to areas of potential growth in North and West Douglas. The legislation that created the Mendenhall Wetlands Refuge had the foresight to provide for transportation corridors through the wetlands. In terms of route selection, it seems pretty clear that the crossing will be most functional if it is as far away from the current bridge as possible, while staying clear of the airport. The Sunny Point overpass intersection was designed with a potential crossing connection in mind. On the North Douglas side, the Hendrickson Point area provides the most flexibility for the crossing connection. This crossing area has the best combination of traffic efficiency and safety benefits, while allowing for minimal disruption to surrounding neighborhoods on both sides of the	Good morning Mr. Shattuck, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/19/2022	M. McCammon	

		crossing. This project has been studied to death. Hopefully this time around we can finally see some tangible benefits (a completed crossing) come out of the millions and millions of dollars spent studying a project that most agree is necessary and inevitable. Let's get it done! Thank you,				

12/19/2022	David Epstein	Greetings, I would have attended the December 12 public meeting but was out of town for work at the time. That said, I have reviewed some of the project documents. In my opinion, Juneau needs a 2nd crossing and I wholeheartedly support the initiative. As a resident of Bayview subdivision, I am concerned about potential effects that some crossing alignments could have on our neighborhood. A few of the ideas for crossing locations would/could land nearby, too close for my comfort level. A balance needs to be achieved that satisfies project purpose and need without levying significant negative impacts on residential areas. From what I see in other study documents, this appears achievable and I encourage the study team to work toward that end. For full disclosure, I work at DOT&PF Southcoast Region. These comments are my own and are not made in the capacity of my employment with the Department. Thank you for your consideration. Best regards,	Good afternoon Mr. Epstein, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/19/2022	M. McCammon	

12/19/2022	Steve Bradford	I am retired from the Alaska DOT, having served my last 7 years as the state's Chief Bridge Engineer. Additionally, I am a near 50 year resident of Juneau. It is my opinion that the greatest benefit from a 2nd crossing will occur at the most northerly feasible location. That location would be along the top of the Mendenhall Peninsula. This route neither impacts the Fritz Cove neighborhoods or the Mendenhall Peninsula neighborhoods. If constructed just under the ridge, airway/highway conflicts are avoided. As the roadway along the top of the peninsula reaches tidewater near the Gastineau Channel, the roadway would continue on fill and then on a bridge sufficient for small vessel clearances and hydraulic opening, and then again on highway fill to join with the North Douglas Highway in the vicinity of the North Douglas launch ramp. This option gives the most direct access to future development on the backside of Douglas Island, and has the least traffic impact to all North Douglas highway residents. While there may or may not be less expensive options, I think this option provides the greater value towards serving the purpose and need of a 2nd crossing. Thank you for considering my comments.	Good afternoon Mr. Bradford, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/19/2022	M. McCammon	

12/19/2022	Tom Gill	For those of us unable to attend the meeting: Are there any meeting minutes available? Is there a summation of any kind? Any public feedback? Once again a great table of contents And outline. And maps with no explanation Tom Gill	Good afternoon Mr. Gill, The materials presented at the open house are available on the project website https://www.jdnorthcrossing.com//outreach.html and by clicking this link directly to the Story Map: https://gis.dowl.com/portal/apps/storymaps/stories/f7cb8dba48b84936a3e40a60cd246813 Please let us know if you would like to discuss the preliminary alternatives further. A description of each is included in the Story Map. Also included in the Story Map is the screening criteria and evaluation. We have requested feedback by January 20, 2023, so we will not have a summary of that feedback until after that date. Please let me know if I can provide any assistance. Best regards, Morgan McCammon	12/19/2022	M. McCammon	
12/20/2022	George Fisher	Hello, my name is George Fisher. I'm a resident of Juneau since 1971. I've seen a lot of the changes Juneau has gone through. I'm in favor of a second crossing to Douglas Island. My preference would be in order of preference. 1. Just north of the airport industrial blvd 2. Sunny point intersection. 3. Vanderbilt intersection. Thanks, George Fisher	Good morning Mr. Fisher, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/21/2022	M. McCammon	

12/20/2022	John Monagle	Juneau has needed to expand our potential for recreational, residential, commercial, industrial as well as port development in order to keep Juneau economically viable and healthy. This is a reasonable way for Juneau to achieve those goals and now is an opportune time to acquire Federal infrastructure funding for that purpose. If reasonable opportunities exist, our young adults our young adults will see a reason to be here! Without positive change, the slow loss of vital youth will continue south.	Good afternoon Mr. Monagle, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/20/2022	M. McCammon	
12/20/2022	Krista Garrett, Conservation Director	Hello, Please find attached a memo outlining SEALT's comments and questions regarding the PEL study's draft materials and processes shared with the Technical Advisory Committee during the meeting on 11/17/2022. We are requesting responses to our questions be shared with the Technical Advisory Committee before Level 1 screening begins and no later than February 1, 2023. Thank you, -- Krista Garrett she/her/hers Conservation Director See attachment dated 12/20/2022	Good afternoon Krista, Thank you again for the comments and questions. We appreciate your involvement in the study and on the advisory committee. Please see the attached response memo. Please let us know if you would like to discuss any of these issues further, we would be happy to meet with you. Best regards, Morgan McCammon See full response in letter attached to comments dated 12/20/2022	2/2/2023	M. McCammon	Advisory Committee Comment - Meeting 2

12/20/2022	Rick Perkins	I am very much looking forward to having a second crossing. It will be a huge benefit to the community, for safety, and to help with new property development. I know there are opinions that the farther out the better for the crossing, but some of those options have no way handle the traffic. Engineers' cutoff is not a major road and cannot be widened easily. This option would also have to cross more deep water. Likewise, the industrial Boulevard has similar problems, it could be improved to handle the traffic. However, it would need to cross the Mendenhall River and the channel. This leaves the overpass at Sunny point, and Vanderbilt light as the two best choices. Using the existing light would work but would also slow down traffic on Eagan drive. This light already has times when traffic is delayed and backs up a bit. The exit and on ramps are already in place at the overpass near the old Walmart, would be the least impact on traffic. The wetlands in these areas are already disappearing due to Isometric rebound. The new road could be built largely on fill with some large culverts for fish passage. Cheaper than a large bridge, and impact to the wetlands would not be that much greater. I have hunted the wetlands for over 30 years and hate to have it gone, but the benefits out way the loss. Thanks for the chance to voice my opinion,	Good afternoon Mr. Perkins, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/20/2022	M. McCammon	

12/20/2022	Rob Kenney	Opportunity to put the Coast guard icebreaker staging area and Dock just passed North Douglas boat launch ramp in the cove.....	Good afternoon Mr. Kenny, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/20/2022	M. McCammon	
12/20/2022	Thomas Johnnie, Sr	sd	Good afternoon Mr. Johnnie, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/20/2022	M. McCammon	

12/28/2022	Andy Hughes	Evaluate construction of a causeway across the Gastineau Channel Wetlands southeast of the airport runway with a hydraulically operated bridge located at an elevation sufficient to pass most small vessels forecast to be able to navigate the channel over a reasonable period into the future as restricted by hydrostatic rebound. The bridge could be opened by appointment to pass the occasional vessel with clearance requirements exceeding the bridge clearance limits at high tide. As years go by the need to open the bridge should become moot as the land continues to rise. Conduct a survey of the number of small vessels that transit the channel by size, type, and height. My guess is the clearance requirements below the approach to the airport runway is 18 feet below the airport runway approach surface. I do not believe longer runways will be needed Also locate the point where the incoming tides meet from the east and west ends of the channel. Locating the causeway as close to this point as possible would minimize the impact to existing tidal currents. Consider the population centers of Juneau, trip purposes, and length of forecasted trips to identify crossing locations that provide the greatest economic benefits to the user. Identify the most cost effective alternative over the road crossing service life, all cost consider.	Good afternoon Mr. Hughes, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	12/28/2022	M. McCammon	

12/28/2022	Andy Hughes	The Harbor Master may have an idea of how many and type of vessels transit the channel at high tide. He also might be willing to participate by recording harbor staff daily observations of vessels transiting the channel. The US Coast Guard is key to determine degree that you can restrict channel transit.	Good morning Mr. Hughes, Thank you for the additional suggestions. Morgan McCammon	12/29/2022	M. McCammon	
1/3/2023	Patty Wahto Airport Manager Juneau International Airport	Good afternoon, Steve. It was just brought to my attention that the State and DOWL are moving forward with the preferred alternative of the second crossing to Douglas at the Sunny Point location. The Airport went on record that this has a high probability of impacting the extension of our MALSR to RWY 26. We have funding in place through the BIL grant and now awaiting the final congressional language change for FAA to assume ownership and maintenance. I sincerely hope this is incorrect information that would impact approaches to JNU. My next email will be to our congressional delegation. Patty	Patty, I will call you to discuss but since several folks were on the email, I'll let you know that we are a long ways from choosing a preferred alternative. We are still in the concepts stage but one of the concepts is in the Sunny Point area. We are certainly aware of the issue with the planned MALSRs and the unique approach surfaces east of the runway. We are making sure that we are not in conflict with either of these issues. We consider it to be a fatal flaw if the concept impacts the existing or future approach surfaces or the ability for the airport to extend the MALSR to RW 26. Thanks Steve	1/3/2023	S. Noble	Advisory Committee Comment - Meeting 2

1/5/2023	Amy Rodman	Message: Hi, I'm calling about the proposed N Douglas Bridge. I was in Juneau. I am not quite sure how much public outreach has been done besides, you know, public meetings and whatever the formal process requires. I see that there's a website through DOT's website, but I was wondering, you know, how much on Facebook has been done. I wanted to post a link to the project website and also to the survey that's due in a couple weeks that a lot of my coworkers and friends and family haven't even seen or heard about. To the general Community collective Facebook website and also the Douglas Island related Facebook groups, yeah, I just don't know how much people don't really look at dot websites much. Anyways, that wasn't sure how much was being done on social media except where the people are. My number is [redacted]. Thanks and have a good day. Bye, bye.	I called Ms. Rodman back. I let her know that DOT&PF and CBJ were handling social media posts. I said we would be happy to have her share information about the project website and survey on Facebook groups she is a part of to supplement the social media outreach. Additional Response Hi Amy, Thank you for call and your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments and concerns with the project team regarding the social media outreach for this PEL study. We made some changes to the website wanted those to be in effect before sending language to share on social media. Here is some language you could share on the Juneau Facebook Groups you are involved with: The City and Borough of Juneau has partnered with the Alaska Department of Transportation and Public Facilities to study a possible transportation corridor to connect Juneau with the north end of Douglas Island using the Planning and Environmental Linkages (PEL) process. Click here to view the StoryMap with an overview of the Preliminary Alternatives and the screening process. Based on comments received to date, the study team modified one alternative and extended the survey comment period to February 3, 2023. Please submit your comments by completing the online survey. Comments sent to the study email address, jdnorthcrossing@dowl.com, and via the website are accepted anytime. Make your voice heard! Please let us know if you have any additional	1/5/2023	M. McCammon	

			comments or questions. Best regards, Morgan McCammon			

1/5/2023	Cody Hargreaves Sr. Principal Performance Based Navigation (PBN) Engineer Flight Operations – Engineering & Fleet Technology	Good Morning, Could you please send me an shape file or some format that AutoCAD can open outlining the areas of interest? We are primarily concerned with the Sunny Point Area, but if it's easy enough to send all areas we would like to analyze and determine at what height the area would impact our flight procedures and/or payload at the airport. Thanks and Happy New Year! Cody Hargreaves Sr. Principal Performance Based Navigation (PBN) Engineer Flight Operations – Engineering & Fleet Technology	Good morning Cody, At this stage in the PEL study, we do not yet have drawings or shapefiles for the concepts. We expect that these should be developed within the next month or two. We will share these with you when available. We appreciate your continued involvement. Please let me know if you would like to schedule a meeting to discuss this further with the study team. Best regards, Morgan McCammon	1/5/2023	M. McCammon	Advisory Committee Comment - Meeting 2
1/5/2023	Patty Wahto Airport Manager Juneau International Airport	Hi Stewart. Thank you for reaching out. I would be available Friday afternoon after 1:30 if that works. Our Deputy, Phil Adams was on the Ramp design meeting call on Tuesday. I was not able to attend, and the more recent TAC meetings for the second crossing conflicted with my schedule. So when Phil stated that, during the ramp meeting, DOWL mentioned that sunny point location for the crossing looked to be the preferred alternative, I was caught off guard. It was mentioned as a sidebar that the State had received $7M to move this project to the next phase. Sounds like the hunters have a stronger advocacy group than the aviation group. Or the State really wants to limit access options into JNU. Does tomorrow afternoon work for you? Patty	Phone conversation		S. Osgood	Advisory Committee Comment - Meeting 2

1/9/2023	Margo Waring	Thank you for sending along these materials. My comments are below. The Draft Recommended Alternative Selection Criteria Memo introduces a new criteria by establishing as a given a purpose that exceeds original study intent. Several times in describing purpose, the phrase "corridor to connect Juneau with the north end of Douglas " is used. The intent of the study all along has been a second crossing—which is why the study generated alternatives sites as close to downtown as Twin Lakes, far from the "north end" of Douglas Island. This is "purpose creep" and a focus created by the PEL Study Team that is unfair to both the original intent and to public process. It is not the job of the PEL Study Team to re-write the study's purpose to skew favor toward one or more alternatives, perhaps expecting that we will not notice as our eyes slide over the bureaucratic language. The study has all along used the purpose language of : "Improve connection to North and West Douglas Island by creating additional traffic capacity to support the future development of affordable housing and economic development opportunities." What makes for affordable housing? Experts know that affordable housing comes from building higher density housing close to existing infrastructure (water, sewer, garbage, electric, transportation, etc.) and services. You DO NOT have affordable housing where you must clear forests, build water and sewer distribution and processing, new roads, new services such as garbage collection and disposal, public transportation and schools. The study's language assumes that West Douglas is capable of providing affordable housing when Juneau has difficulty building affordable housing even with our stable	Good afternoon Ms. Waring, Thank you for being involved in this study and sharing your concerns and comments. The language you identified "corridor to connect Juneau with the north end of Douglas Island" is indicated in the PEL Study Description and is not included in the Purpose and Need Statement. We will consider a clarifying revision to that statement to indicate that the PEL study is studying a possible transportation corridor to connect Juneau with Douglas Island north of the existing bridge. Development of the purpose and need statement is one of the first steps of the PEL process. This is an iterative process where the study team has taken input from the public and agencies, as well as met the guidelines of the Federal Highway Administration. We did not come into this process with preconceived notions of what the purpose and need would say. The purpose and need statement has now been completed and approved by the Alaska Statewide Environmental Office, and it does not include economic development. The statement, "Improve connection to North and West Douglas Island by creating additional traffic capacity to support the future development of affordable housing and economic development opportunities." is listed as an Additional Goal for the study. Please see the approved purpose and need statement as posted on the study website documents tab: https://www.jdnorthcrossing.com//documents.html.	1/11/2023	M. McCammon	Advisory Committee Comment - Meeting 2

		population and where existing services and infrastructure exist. That leaves as a purpose “economic development”, the true driver of interest in the north end of Douglas Island, the desire of some commercial interests in economic possibilities paid for with public dollars and at the expense of environmental values.	Please feel free to reach out if you have any additional concerns or comments to share with the study team. Best regards, Morgan McCammon			

1/9/2023	Roy Churchwell, ADFG	Hello Morgan, In your email you mention, “the Sunny Point Area preliminary alternative has been modified to include a secondary entrance on the mainland side”. I would be happy to provide further comments on this, but can you provide better direction to where I can find a description/map of this secondary entrance? Thanks. Roy Additional comment Hello Morgan, I think the issue is (at least for me) that the map you have provided has all of the alternative routes on it, but you have asked us for additional comments on an added route. Unfortunately, I am not sure which one that is. Can you provide a map with that one route delineated? Roy	Good morning Roy, Please open the StoryMap (https://gis.dowl.com/portal/apps/storymaps/stories/f7cb8dba48b84936a3e40a60cd246813), and click on the Preliminary Alternatives tab at the top of the screen. The modified Sunny Point Area preliminary alternative is shown, both on the overall map with all preliminary alternatives and on the detailed map found when scrolling down. Please let me know if you have further questions. We look forward to your comments. Best regards, Morgan McCammon	1/9/2023	M. McCammon	Advisory Committee Comment - Meeting 2
1/9/2023	Barb Mecum	Ms. Mecum called to ask for clarification on the modified Sunny Point Area preliminary alternative. I assisted her to navigate to the StoryMap and shared that more detail would be provided at future iterations following level 1 screening. She shared that she was concerned that the maps were not showing individual properties and acknowledging that people's homes could be impacted by various alternatives. She also said she would share an update to the petition she organized against the Mendenhall Peninsula preliminary alternative Additional comment Hi Morgan, Thanks for speaking with me today, very helpful.	Hi Barb, Thank you for sharing this update on the petition. We appreciate you letting folks know the comment period has been extended. We want as much participation as possible. Best regards,	1/9/2023	M. McCammon	Advisory Committee Comment - Meeting 2

		Just a quick update our Friends of Fritz Cove Petition is now up to 76 signers. I'll let our folks know the comment period is extended. Please let me know you received this email. Thank you, Barb				
1/10/2023	Barb Mecum	Hi Morgan, Just a quick update, we just grew to 87 signers on our petition to oppose the Mendenhall Peninsula to the boat launch area. Are you able to add that to the Public Record? Also, hoping some of the folks went back online to do your survey. Thank you, Barb	Good morning Barb, Thank you for sharing the update on the petition. Any comments, updates, or concerns you send are part of this record. We want to hear from you, and anyone, as often as you like, especially as new study materials are developed. We have gotten, and are continuing to get, responses to the survey. We appreciate your continued involvement in this process. Best regards, Morgan McCammon	1/11/2023	M. McCammon	Advisory Committee Comment - Meeting 2

1/10/2023	Margaret Custer · Executive Director Southeast Alaska Land Trust	Hi Morgan, Please send out the preliminary alternatives to the technical advisory committee so that we are able to provide feedback. Thank you, Margaret Custer · Executive Director Southeast Alaska Land Trust	Good morning Margaret, Please see the attached modified preliminary alternatives. Please let us know if you have any further questions. Best regards, Morgan McCammon	1/11/2023	M. McCammon	TAC Email
1/11/2023	Dave Hanna	Greetings all, In regards to Ms. Warings' comments on mission creep, I believe she is splitting hairs here as well as misconstruing the intent. If the language didn't say the north end of Douglas island it could move the crossing south of the current bridge. Looking at a map shows that anything north of the bridge is on the north end of the island. And as far as " affordable housing" location criteria, public utilities are actually available all the way out to Bayview Subdivision, and no matter where subdivisions are built, clearing and filling are necessary. Indeed one of the largest expenses is filling, and the far north end of the island has rock resources on the actual subdivision sites which drastically reduces the cost of development. I commend the work of the team so far in recognizing all the aspects to consider in this study. Respectfully, Dave Hanna	Good afternoon Dave, Thank you for the feedback. Please let us know if you have any additional feedback on any of the preliminary alternatives and the screening process including the screening criteria by February 3, 2023. Best regards, Morgan McCammon	1/11/2023	M. McCammon	Advisory Committee Comment - Meeting 2

1/11/2023	Linda Shaw (she | her) Wildlife Biologist, Alaska Region NOAA Fisheries | U.S. Department of Commerce	Hi Morgan, NOAA FIsheries Habitat Conservation Division would assess alternatives based on those that present the least impact to essential fish habitat (EFH) from wetland, riparian, shoreline or waterbody fill, or that compromise previous compensatory mitigation. The permitting federal agency with a nexus to EFH consultation requirements would need to prepare a detailed EFH assessment based on the specific project proposals for our review. To provide a broad brush perspective, alternatives that move away from the existing bridge look to have progressively higher impacts. However, this will depend on their specific footprint and nature of impact Linda Linda Shaw (she | her) Wildlife Biologist, Alaska Region NOAA Fisheries | U.S. Department of Commerce	Hi Linda, Thank you for feedback. Please let us know if you have any additional feedback on the preliminary alternatives or screening process and criteria. Best regards, Morgan McCammon	1/11/2023	M. McCammon	Advisory Committee Comment - Meeting 2

1/11/2023	Karen Crandall	A question – I just checked your site again and read: Survey: Based on comments received to date, the study team modified one preliminary alternative and extended the survey comment period to February 3, 2023. What alternative was modified and what was changed?	Good morning Ms. Crandall, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the study team and added you to the project email list. The survey comment period is being extended until February 3, 2023 because, based on comments received to date, the Sunny Point Area preliminary alternative has been modified to include an alternate connection on the mainland side. This is a separate landing point that will be evaluated on the Juneau side of a possible crossing near the Sunny Point interchange. A crossing in this area would connect either to the interchange directly or to Egan Drive approximately a half mile west of Sunny Point interchange. A crossing under this option would not include both connections. Please let us know if you have any further questions or comments on any preliminary alternative and the screening process. Best regards, Morgan McCammon	1/13/2023	M. McCammon	

1/11/2023	Matt Voelckers	In my opinion, the north or south airport crossings makes the most sense to serve the most people. In lieu of a bridge, consider a tunnel. Drive temporary steel retaining walls into the wetlands. Excavate, drive pile, construct a concrete tunnel or lay precast tunnel sections, then backfill the sand and silt to remediate the wetlands. The tunnel must only be as deep as to be obscured. In effect it bears on piling just the same as a bridge would. I think juneauites value our wetlands too much for a bridge, and a shallow tunnel is not a huge technical challenge. -Matt voelckers	Good morning Mr. Voelckers, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/12/2023	M. McCammon	
1/13/2023	Betsy W. McCracken EPA Biologist	Good morning, Please see attached preliminary comments from EPA on the Juneau Douglas North Crossing. Please share with the Technical Advisory Committee. Thank you, Betsy See attachemnt dated 1/13/2023	Good morning Betsy, Thank you for providing comments. We appreciate this input and will continue to include you on future updates and opportunities to provide feedback. Best regards, Morgan McCammon	1/13/2023	M. McCammon	Advisory Committee Comment - Meeting 2
1/13/2023	Leonard Roger Calloway Jr.	To whom it may concern; I support the second crossing, with the preferred route option of Mendenhall Peninsula or Industrial Blvd. Peace!	Good morning Mr. Calloway, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/16/2023	M. McCammon	

1/14/2023	Bruce Baker	My January 14, 2023 comment letter regarding the Juneau Douglas North Crossing PEL Study is attached to this email message. Please make my attachded letter part of the administraive record. Thank you, See attachment dated 1/14/2023	Good morning Mr. Baker, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comment letter with the project team and updated your information on the project contact list. Best regards, Morgan McCammon	1/16/2023	M. McCammon	

1/16/2023	Patricia Rorick	I have been a resident on Mendenhall Peninsula for over 30 years and this is the last place I would want to see a bridge to Douglas Island. We live in an isolated area with a large amount of wilderness and wildlife. Around my house, I am able to regularly watch red squirrels, eagles, ravens, deer, black bears, woodpeckers, songbirds, and porcupines as they go about their lives feeding, rambling, and playing. My property borders the wetlands and we have to be very careful to contain any toxins that could run off down the hill into a critical salmon spawning stream. Any road up the hill would increase ten fold the fuels and oils that seep downhill and end up in the wetlands, poisoning the tiny salmon that hatch there. Besides disrupting the wilderness and the birds, fish, and animals that depend on it, a road along the peninsula ending in a bridge would greatly disrupt my quality of life by bringing noise and exhaust from cars, and street lights creating light pollution, into my neighborhood. At the end of the peninsula is a trail that goes all the way around the tip of the peninsula and ends at Fritz Cove Road. I hike this trail with my family several times a week throughout the spring, summer, and early fall. A road and bridge would cut this trail in two and make it completely unusable. Any bridge that would be built would need to be high enough for boat traffic to travel under it, as many small vessels come around the point and into the Mendenhall wetlands from the Auke Bay marina. I can only imagine the enormous amount that such a monstrosity would cost. The wildlife in this area would never recover from the disruption and the tranquility in my neighborhood would be gone forever. I am not convinced that a second crossing is needed at all, and I favor a “no alternative” option.	Good morning Ms. Rorick, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/17/2023	M. McCammon	

		The expense of this project is huge, and I would rather see my tax dollars go toward a project that discourages the use of cars that produce more traffic, carbon, and pollution. Instead of building more roads and contributing to climate change, we should be building infrastructure for electric cars and buses and finding ways to consolidate traffic and use more public transportation. If the city must build a new bridge, it should be built at the Salmon Creek intersection so as to provide easy access to the hospital. Anything further up the channel will interfere with the Mendenhall Wetlands, and destroy any chance of hiking, dog walking, bird watching, and hunting in the area. I enjoy driving down to Vanderbilt or Sunny Point to hike the wetlands on a sunny day and exploring the tidal grasses with my family. I urge DOT to reconsider the bridge to North Douglas and instead use my tax money for a project that benefits everyone in the city of Juneau, by preparing us for the changing climate. Thank you for your time.			

1/17/2023	John Blasco	Mayor Beth Weldon & Members of the Assembly Re: Assembly Priorities The Juneau Chamber appreciates the work that all of you put in to guide Alaska's Capital City through an ever-changing multitude of challenges. The chamber board took the time to review the draft FY24 list of Assembly priorities as presented at a recent finance meeting. We do not take issue with any of the items listed, but we are greatly concerned that you have moved the "Juneau North Douglas Crossing" previously #2 down to #8. We strongly urge the Assembly to reorganize the list to reflect the top three items as: #1 Pederson Hill Development #2 Juneau North Douglas Crossing #3 CBJ Radio System Replacement The chamber has no comment on the order of the remaining 19 items. We believe that it is critical to the ongoing efforts to secure federal funding that it remains clear that this is a top priority for the City of Juneau. While we have been successful in securing state funding for the PEL study, and now $7 million in federal funding for the subsequent stage of environmental and design, we are a long way from completion. We ask the Assembly not to downgrade the importance of this project. This is a moment in time when this project may have access to the significant amount of funding required to construct the North Douglas Crossing. Your endorsement of its priority will have an impact on various funding applications as well as the public's view of this project. Respectfully, John Blasco Maggie McMillan	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

1/17/2023	John Chapman	Should be located for maximum efficiency and minimal impact to current neighborhoods. Nine mile road or further out makes sense.	Good morning Mr. Chapman, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/17/2023	M. McCammon	
1/17/2023	Roger Ramsey	Hello All, So my preferred option would hit north Douglas Highway right at the intersection of Fish Creek Road which leads to Eaglecrest. There is a significant amount of traffic generated by Eaglecrest and with the Gondola and other imminent potential future developments off Fish Creek Road, it would be very wise to have the intersection of the second crossing come right to Fish Creek Road. AK Mental Health Trust sold a vacant lot to John Bohan, a CBJ project manager, directly across from Fish Creek Rd and it is still vacant. So using emanant domain to acquire this lot would be painless. The view shed is already encumbered by the airport runway, so adding a road in front of this on the other side of the Channel from ND would not change things too much. There is already a CBJ right of way between Temsco and Bicknell, so that side would have and easy connection. Additionally, there is already a fully developed intersection with a brand new gas station and convince store on the Egan side. I would truly love to hear why this option is not on the table. Thanks so much for your time,	Good morning Mr. Ramsey, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments and suggestion with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/17/2023	M. McCammon	

1/18/2023	David Kirstien	Hi Morgan, I returned a phone call today from David Curstine (sp??) It was a lengthy phone call and hard to capture it all. I encouraged him to provide written comments. Here are some points that were covered. David was concerned that the two northernmost alternatives were added following the public meeting. His understanding was from an article in the Empire that led him to believe these were added after the other alternatives. I explained that we started with 15 crossing ideas from discussions with the public and the ideas were consolidated into the 8 preliminary alternatives that were presented at the public meeting in December. I further clarified that the only addition since that meeting was the northern connection for the Sunny Point alternative. David also expressed dislike of the open house format, particularly that there was not a formal presentation. He felt like he didn't have the information necessary to ask good questions. David asked about the current traffic on the bridge and where people are going and coming from. I explained that we will soon have that information as part of the origin-destination study. David expressed some concerns about the process, timeline, how long EIS would take, and when construction might be expected. I explained the PEL study process and that it does not include an EIS at this time and a future project would be initiated to perform full environmental study.	Phone conversation	1/18/2023	M. Heidemann	

		David also had some concerns about a bench road, specifically why he was told it isn't part of the study. I explained that the PEL study provides opportunity for us to make additional recommendations, but it is not directly part of any of the alternatives. I gathered that David is in support of a bench road because he is concerned about traffic impacts on N. Douglas Highway. Some other concerns expressed were for the viewshed north of the airport and that the project, particularly the north options, are proposed on behalf of Goldbelt to provide cheap and easy access to their land. I voiced that this was not the intent of the project and explained the transportation focused purpose and need and the screening criteria. I encouraged him to review both to better understand how the alternatives would be evaluated. Thanks,				

1/20/2023	David Kirstien	Project Planners and Contacts: I would like to make the following comments and observations regarding the proposed project for another crossing to Douglas Island. In your literature you reference the main Needs are for (a) Alternate access and transportation infrastructure resilience and (b) Decrease traffic pressure on Douglas Island Bridge and its intersections. Also references in the literature are to Purpose and Additional Goals. After reading your literature I would like to make the following comments and observations. 1. The 14,000 crossings per day on the existing bridge does not identify how many crossings are North of the roundabout versus South of the roundabout. This information should be available for the project planners to assess the impact on the N Douglas Highway when a new crossing is being contemplated. Having a crossing closer to the existing bridge will access the Hospital and may divert some of the drivers from South Douglas to a new crossing. 2. Two of the 8 primary crossings being contemplated are 9 to 10 miles North of the current bridge. I don't see how a bridge that far North is going to alleviate much of the crossings that emanate from those drivers South and just North of the roundabout. They will still use the existing bridge and they represent a large percentage of the 14,000 daily crossings. 3. The two far North crossings would require either a bridge or a tunnel. Both are very costly to build and maintain. A bridge would negatively impact the "view scape" of the Mendenhall Glacier, especially at Mile 10 and 11 on the N Douglas	Good afternoon Mr. Kirstien, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments and questions with the project team and am working on getting answers. I will add you to the project email list. Best regards, Morgan McCammon Additional Response Good morning Mr. Kirstien, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. We appreciate your feedback and questions. We also appreciate you taking time to review the PEL Study materials on the website. The PEL process is a Federal Highways Administration (FWHA) process designed to integrate transportation planning and environmental analysis in a collaborative fashion. The PEL process creates a space to engage with agencies and the public on environmental, community, and economic goals, develop a purpose and need statement, and perform preliminary screening of alternatives during the planning process. Planning analyses and products from a PEL Study can be carried forward into the National Environmental Policy Act, or NEPA, or other environmental review processes. The goal is to save cost, streamline the delivery timeline of future projects, and focus expenditures on viable options. As part of the analysis being conducted, the study team is developing an origin-destination study utilizing GPS data to model traffic patterns. We	1/20/2023	M. McCammon	

		Highway. A bridge would also negatively impact viewing Auroras. Juneau residents and tourists would be negatively impacted by damaging their "view scapes". Further, traffic from either crossing would dump onto a two lane road, the N Douglas Highway. Not really a highway, just a road. 4. Your literature mentioned the Bench road. When I asked a Project Team member about this road their reply was "it is not part of the study". So you're planning on dumping all this additional traffic onto a road called a "Highway"? And there's no planning on the creation of this road concurrently with the planning for a second crossing? Not sure I'm understanding the lack of comprehensive planning on this project. 5. Your literature references creating "additional traffic capacity to support the future of affordable housing and economic development opportunities. Is this "Code" for helping the Native corporation gain road access to its buildable land so they can have "no cost to them" road access for their money making subdivision that will be at least 14 miles from the existing bridge crossing or 6 to 8 miles from the Valley? And what kind of subdivision will it be to make it "affordable"? Multi-family units for rent? For sale? Single family homes for rent or for sale? Juneau has not been experiencing any population growth for at least the 5 years I've lived here not because of available, "affordable" housing but because the economic engine for Juneau is tourism that lasts at most 5 months out of the year. Tourism workers stay 5 months too, then depart. Economic opportunities out that far are only Eaglecrest Ski Area and anything built by the Native corporation to make more money for them. And the federal government is indirectly subsidizing the Native corporation's agenda/projects?	expect this analysis to be complete in February 2023. This analysis will help us to better understand traffic patterns in the study area and how a north crossing might change them. In order to demonstrate a robust process, the study team must consider all feasible alternatives, then apply the screening processes, which will determine the alternatives to move forward for more detailed analysis. Eliminating an alternative too soon and without the proper evaluation and documentation jeopardizes the entire process. The level 1 screening uses criteria from the following areas: purpose and need statement, natural environment, social, housing, economic impacts, safety, cost, and public support. Once level 1 screening in complete, the remaining alternatives will be recommended to advance to detailed alternative development. Future evaluation of detailed alternatives will include design details like impacts to environmental resources, including viewsheds, and costs for construction, mitigation, and annual maintenance. Level 2 screening will evaluate these to assist in identifying the recommended alternative or alternatives. Throughout the process, a no-build alternative will move forward as a baseline comparison. These alternatives, including the no-build, along with associated data and analysis will move forward to a future National Environmental Policy Act (NEPA) process. A potential future bench road, or other recommended upgrades to existing infrastructure, are not part of this PEL Study. The project team added the bench road in response to public comments mentioning the need for it. Some upgrades could be beneficial to construct, such			

		My last area of concern is the PEL process. I attended the December 12 Open House. (I do not recall receiving notice of any previous meeting. I live in the affected area.) There were at least 150 in attendance at the time I was there. Lots of information were on tables and storyboards. Lots of people were reading and learning more about the crossing issues. Project Team members were there. Every time I came up to a table a Project Team member politely asked if I had any questions. I came away that evening thinking that if I don't ask they're not going to tell anything about the project. It felt as if the PEL process did not provide an orientation or presentation summary of the Project but expected each attendee to spend several hours learning about the issues and then ask questions. I am not impressed with the PEL process. I understand that this project is federally funded. I would hope that this Project is well thought out by the Project Team members and well communicated to the residents of Juneau. Thank you for letting me share my comments, concerns, opinions and observations. Respectfully,	as a bench road, regardless of a north crossing proceeding and could be recommended for development. These projects would be independent of north crossing locations recommended by the PEL Study. One of the additional goals of the PEL Study, that you noted, is based on the City and Borough of Juneau recognizing the need for affordable housing in the Juneau area. Juneau has a unique landscape with little available buildable land remaining. One area that could be developed is west Douglas Island. While no development is in the design stages at this time, a north crossing could provide redundant emergency access in the event the existing bridge is out of service and decrease pressure on the existing bridge and intersections. Please reach out if you would like to discuss these or any other issues. Best regards, Morgan McCammon			
1/23/2023	Bob Saviers	Voice Mail - Bob Saviers [redacted], looking to see if you received my comments and other comments on the 2nd channel crossing. Thank you.	I called Mr. Saviers back. He asked if I had received his comments sent over the weekend. He sent them to the project email address. I have not seen them, so I requested he send them directly to my email address. He said he would forward them to me.	1/23/2023	M. McCammon	

1/24/2023	Mel Izard	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. Here are the reasons why: — This project is uniquely susceptible to fatally flawed alternatives because of the tremendous wildlife, habitat, ecosystem services, recreational, and viewshed values of Taashuyee, the Mendenhall Wetlands. Again, alternatives which cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL process or in an Environmental Impact Statement. (Watch: The history of the refuge.) — The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the Salmon Creek, Mendenhall River, and Fish Creek estuaries. —There is not a demographic demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This places a particularly high burden of proof for a need for this project and is critical in weighing the relative importance of alternatives that cross the Mendenhall Wetlands. This project will likely increase community sprawl and create a services cost burden for all community members. — Alternatives that reduce the short-duration	Good afternoon Mel, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/24/2023	M. McCammon	

		traffic pressure on the existing Douglas Bridge and intersections should be evaluated, including non-crossing opportunities such as improved public transportation and area-wide housing density improvements. — The expenditure of large amounts of federal tax dollars in a community that is not growing for a project which would expand the community footprint is, at best, questionable. I care deeply about Juneau, and adding this second crossing would negatively impact the beauty of Juneau that makes me love calling this place home. Gunalchéesh/thank you,				
1/24/2023	Kathryn Dupere	I vote the North Airport. The others are too close to the existing bridge and the Mendenhall Peninsula/ Fritz Cove one is longer so it would cost more.	Good afternoon Ms. Dupere, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/24/2023	M. McCammon	

1/24/2023	Max E. Mertz	Good morning, the purpose and needs statement November 2022 update lists three 'additional goals' at the bottom of the statement. The third states "Transportation improvements should avoid, minimize, and mitigate impacts to the environment and to residential areas." How can any project avoid impacts? Whether you view impacts as positive or negative, impacts will occur. Mitigation is also something that can't necessarily be fully achieved. Also, existing various governmental regulations are in place to mitigate impacts. If these terms are tests that the project will be held to, then it will in itself kill the project. I hope that wasn't your intent, and believe it wasn't. The existing language opens the door to legal challenges. That bullet should be modified to state "Transportation improvements should minimize, where appropriate, potentially negative impacts to the environment and to residential areas." Thank you. Max	Good afternoon Mr. Mertz, Thank you for your interest in the Juneau Douglas North Crossing PEL Study and your comments. The language you noted in the study purpose and need statement is commonly used regulatory language with legal definitions. An example of avoidance of residential impacts would be to site the project on CBJ land where possible. In instances where avoidance is not possible, there are often design features such as increasing the embankment slope to minimize the project footprint, or minimizing the amount of land needed for a proposed corridor. And should there still be unavoidable impacts, then mitigation is a strategy required to compensate for those impacts. All projects occurring on federal lands or using federal funds, such as this study, must comply with these regulations. In part to this compliance, projects must avoid, minimize, and mitigate to the greatest extent possible while providing clear and concise evidence along the way. Please reach out if you would like to discuss this or any issue. Best regards, Morgan McCammon	1/25/2023	M. McCammon	

1/25/2023	Heather Nelson	Good afternoon, I am writing you to request that you reorganize the priorities and move the North Douglas Second Crossing back up the legislative priority list, in the top 3. Simply put, the timing could be critical as there is a position to have access to the significant amount of funding that is required for the project. The Chamber has recently submitted a letter to the assembly, which is attached, and I mirror its support and efforts. Thank you for your consideration! Warm Regards, Heather Nelson, Community Affairs & HR Supervisor	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

1/25/2023	Alex Wertheimer	Thank you for the opportunity to comment on the North Crossing PEL Study Preliminary Alternatives. There is very sparse information provided on each alternative, which makes it difficult to review them. However, there are some general characteristics for the alternatives that can be used to prioritize which ones go forward to Level 2 screening in your process. The primary need identified for the crossing is alternate access and infrastructure resiliency. Alternate access would allow for access to emergency services, especially transport to the hospital, should the existing bridge be somehow blocked or compromised. The Scoping Document also states that an alternative should reduce traffic pressure on the Douglas Island Bridge and intersections. All of the alternatives meet these needs in some fashion, except perhaps for the Downtown. Again, there is no design detail, but it seems likely that a situation compromising the existing crossing could also impact this alternative. For the other seven alternatives, there is a gradient to how well they meet the emergency access concern, especially in terms of medical transport. The two alternatives northwest of the airport would not improve transport times for the vast majority of Douglas residents, and would greatly increase transport time for this population if the current crossing was compromised. Of the alternatives southeast of the airport, the Salmon Creek crossing stands out as the best alternative to provide reduced transport/response time, with it placing you at the intersection with the hospital. The alternatives also have a range of impacts or benefits relative to the additional goals identified for the projects. For example, there is a north to south gradient in how well the alternatives improve access to North Douglas Island to support	Good morning Alex, Thank you for your continued interest in the Juneau Douglas North Crossing PEL Study. I have shared your informative comments with the project team. Best regards, Morgan McCammon	1/26/2023	M. McCammon	

		economic development. I am particularly concerned with how well the alternatives “avoid, minimize, and mitigate impacts to the environment…” and “maintain the visual, cultural, and scenic identity of Juneau and Douglas Island.” It is difficult to overstate the ecological, environmental, and scenic importance of the wetlands encompassed by the study area. The Mendenhall Wetlands are a Globally Recognized Important Bird Area, providing critical habitat for migratory and resident birds. The Wetlands are also important fish and wildlife habitat and heavily utilized by human hunters and fishers, as well as birders, dog-walkers, joggers, the list goes on. The scenic viewscapes are recognized in the Juneau Comprehensive Plan, including the view from North Douglas towards the Mendenhall Glacier and up Stephens Passage, and the view inbound from Egan towards Gastineau Channel. The State of Alaska recognized the importance of the Wetlands by establishing the Mendenhall the State Game Refuge. We also need to recognize that over 40% of the original wetlands have been filled and developed since the gold mining boom of the late 19th and early 20th century up until today. The incremental destruction and sectioning of the wetlands emphasizes the need for choosing a crossing alternative that has minimal impact on the integrity of the refuge and the ecosystem functions of the Wetlands. The best way to maintain the integrity of the refuge is to keep the crossing out of the refuge. In accordance with AS 16.20.034, the Mendenhall Wetlands State Management Plan specifies that the use for a public transportation corridor is allowed only if “there is significant public need for the corridor which cannot be reasonably met off-refuge”. For the Second Crossing, there are				

		alternatives that could be designed so they do not encroach on the Refuge. Excluding Downtown, these are Eagle, Salmon Creek and the two northwest alternatives. The other three alternatives (Sunny Point,Vanderbilt, and Twin Lakes) would directly impact the refuge. The amount of impact would vary with the type of structure, with earth-fill causeway causing the most damage from the fill, changes to the hydrodynamics of the tidal flows through the southern refuge, and forming barriers to fish, bird, and wildlife movement. These alternatives also would impact the scenic viewscape to a much greater degree than Salmon Creek or Eagle. By far the worst of these alternatives is the Sunny Point crossing in terms of environmental and scenic impact. The two Northwest alternatives could be designed to minimize wetland impacts, depending on how the entry/exit points are designed. By going under the Refuge, a North Airport tunnel could result in minimal environmental impact, as long as the entry/exit points were well upland. The Mendenhall Peninsula crossing could be aligned to stay out of the Refuge at the Peninsula, then make landing west of the North Douglas boat ramp. As noted before, these alternatives best meet the perceived need for access to North Douglas development (and Eaglecrest from the valley), but are also lowest in terms of emergency access. The cost is also likely to be very high relative to other options. The Mendenhall Peninsula option would also disrupt the highly-valued viewshed and require significant development to provide access from Glacier Highway. Salmon Creek and Eagle are the best options to minimize impacts to the Refuge and associated wetlands. Salmon Creek has the advantage of an existing interchange, and as noted above, provides				

		the best emergency access. Eagle is a bit more removed from the Refuge and viewscape, but would require a new intersection on Egan and as described in the alternative descriptions, could have avalanche issues. Of course, every mile south decreases savings in travel time to Eaglecrest and North Douglas relative to more northern alternatives, but those out- comes are a reasonable trade-off for the benefits of maintaining the integrity of the Refuge and the ecosystem processes that sustain it. In conclusion, I recommend the Eagle, Salmon Creek, North Airport, and Mendenhall Peninsula options move forward to Level 2 scoping. While I think that Salmon Creek is the best option, considering these four alternatives in detail would allow quantitative comparisons of the environmentally acceptable options in terms of emergency access, transportation facilitation, neighborhood impacts, and costs.

1/26/2023	James Wells	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. Here are the reasons why: — This project is uniquely susceptible to fatally flawed alternatives because of the tremendous wildlife, habitat, ecosystem services, recreational, and viewshed values of Taashuyee, the Mendenhall Wetlands. Again, alternatives which cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL process or in an Environmental Impact Statement. (Watch: The history of the refuge.) — The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the Salmon Creek, Mendenhall River, and Fish Creek estuaries. —There is not a demographic demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This places a particularly high burden of proof for a need for this project and is critical in weighing the relative importance of alternatives that cross the Mendenhall Wetlands. This project will likely increase community sprawl and create a services cost burden for all community members. — Alternatives that reduce the short-duration	Good afternoon, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/26/2023	M. McCammon	

		traffic pressure on the existing Douglas Bridge and intersections should be evaluated, including non-crossing opportunities such as improved public transportation and area-wide housing density improvements. — The expenditure of large amounts of federal tax dollars in a community that is not growing for a project which would expand the community footprint is, at best, questionable. Gunalchéesh/thank you,				

1/26/2023	joan McBeen	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. 		traffic pressure on the existing Douglas Bridge and intersections should be evaluated, including non-crossing opportunities such as improved public transportation and area-wide housing density improvements. — The expenditure of large amounts of federal tax dollars in a community that is not growing for a project which would expand the community footprint is, at best, questionable.				

1/26/2023	Caitlin Stern	To whom it may concern: I am a resident of downtown Juneau who visits Douglas once or twice each week to take my kids skating at the ice rink, skiing at Eaglecrest, or playing on the beaches at Outer Point. I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge should not be advanced in the PEL study process or in an Environmental Impact Statement. The Mendenhall Wetlands has tremendous value in terms of wildlife habitat, ecosystem services, recreation, and viewshed. These wetlands must not be put at risk of negative impacts in service of a project that is not needed. There is no demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This project will likely increase community sprawl, already a significant problem for Juneau, and create a services cost burden for all community members. Alternatives that reduce the short-duration traffic pressure on the existing Douglas Bridge and intersections should be evaluated, including non-crossing opportunities such as improved public transportation and area-wide housing density improvements. The expenditure of large amounts of federal tax dollars in a community that is not growing for a project which would expand the community footprint and jeopardize the health of important wetlands is unjustified and unwise.	Good afternoon Ms. Stern, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/27/2023	M. McCammon	Survey

		Thank you,				

1/26/2023	Stuart Cohen	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I am against any second crossing for many reasons. First, from a city planning perspective, it encourages suburban sprawl onto Douglas Island. At a time when we need to be consolidating around our city centers with denser housing, this plan will achieve exactly the opposite. How very 1950's! Great for whoever owns the land out in West Douglas. Not so great for those of us who will end up having to pay for water and sewer to be extended out there. Second, I do not approve of the impacts on the Mendenhall Wetlands. We already took a bite out of them when Egan Drive was built, and then another when the City decided to give Bicknell a free pass to destroy (oops, I mean develop) the recovering wetlands area near the airport. Natural areas are destroyed one piece at a time, one road at a time, and this is a step in that direction. How will these plans impact duck hunters and fisherman? Third, this project has always ranked extremely low in DOT rankings of transportation projects around the state. When Juneau was given a chance to fund this with our own money, it was soundly voted down. In other words, we recognized this was a BS project and put our money where our mouth is. Juneau is not currently growing and does not need to open up new space. We have a perfectly good bridge: the 2nd crossing feels like a luxury and a make-work project for the	Good afternoon Mr. Cohen, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/27/2023	M. McCammon	Survey

		benefit of developers, realtors and construction companies. I appreciate the contribution of all those groups; they have skills I don't. But I would prefer to see their valuable skills turned to more positive projects within our current infrastructure. Thank you for your attention.				

1/26/2023	Art Peterson	Hello, As a Juneau resident for almost 57 years, and a North Douglas resident for the first 45 of those years, I have to say, again, that a North Douglas crossing is neither essential nor possible without serious environmental damage. I support the analysis and comments of SEACC, and am very reluctant to see any degradation of North Douglas and its life-style. Generally, I oppose a second crossing of the channel. Thank you. Art Peterson P.S. Currently, I am out of town, and am unable to offer comments in person.	Good morning Mr. Peterson, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/26/2023	M. McCammon	
1/26/2023	C. Matt Felix	As a N Douglas resident am against the crossing. This crossing would not reduce the traffic near my resistance would not be cost effective. The traffic over the bridge and on ND Hwy moves much easier now that there is a roundabout and widening of the Hwy. A crossing is simply not justified at this time. The people spoke with a negative vote in the past, they shall again if necessary.	Good morning Mr. Felix, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/26/2023	M. McCammon	
1/26/2023	Edward Hotch	Hello, in the years ahead when juneau can afford a second bridge crossing it should be built somewhere near engineer cutoff road. We are supposed to protect our wetlands, but more and more if you have money and connections, wetlands are not being a priority to protect which is a shame. A bridge by engineer cutoff would also keep the plane landing zone more safe for them to land. There are many long bridges in the USA, so we all knoe a long one can be built which will also	Good morning Mr. Hotch, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/26/2023	M. McCammon	

		allow boats to dtill use the channel at high tide. Save our wetlands, font let greed take sway our sovereignty of wildlife. Thank you.				
1/26/2023	Greg Cook	Hi-- My wife and I have lived at 5 mile, North Douglas Hwy, for 44 years, so we are intimately familiar with the Mendenhall Wetlands and their multiple values. We have always staunchly opposed various iterations of DOT plans to build a bridge ("crossing") across the Wetlands. Every version of the project yet devised would destroy many of the values for which the State Refuge was created, as well as ruining the additional current uses. The CBJ population has been stagnant or shrinking for years, and Capital Creep will ensure that our population continues downward. There is no need for a Second Crossing--other than to ensure the continued employment of a vocal cadre of functionaries within DOT whose job it is to beat the drum for a "crossing" project that is unnecessary, duplicative, and destructive of Natural values. Thank you for this opportunity to comment.	Good morning Mr. Cook, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/26/2023	M. McCammon	

1/26/2023	John and Millie Holahan	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge should not be advanced in the PEL study process or in an Environmental Impact Statement. Please spare this sensitive and valuable refuge from becoming an environmental shopping mall. Far too many of these habitats, throughout the world, are being exposed unnecessary traffic and damage. — The expenditure of large amounts of federal tax dollars in a community that is not growing for a project which would expand the community footprint is, at best, questionable. Thank you,	Good morning Mr. and Ms. Holahan, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/26/2023	M. McCammon	
1/26/2023	John Roxburgh	I am writing about the Juneau North Douglas crossing project. I am skeptical that a project can be built across the Mendenhall Wetlands State Game Refuge that would not seriously impact the complex ecosystem there. I will not support any option that poses a risk to the many birds and other wildlife that depend on these wetlands. Let's be clear: This is an idea that has been around for years, conceived at a time when the capital city was bursting at the seams. That reality is long gone: Juneau is not growing these days, so there is no longer any economic rationale for a second crossing. This project is essentially a boondoggle designed to benefit politicians, construction companies, and	Good afternoon Mr. Roxburgh, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/26/2023	M. McCammon	

		people who bought cheap land in North Douglas. The community at large does not need it. I would rather see the money spent on better ferry service.				
1/26/2023	Morgan Hebert	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. IT IS TOTALLY UNNECESSARY. Gunalchéesh/thank you,	Good afternoon, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/26/2023	M. McCammon	

1/26/2023	Robert DIVELBESS	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are an EXCELLENT TRADE OFF BEST BALANCING THE NEEDS OF ALL STAKEHOLDERS and should ABSOLUTELY be advanced in the PEL study process or in an Environmental Impact Statement. In general, I am all about environmental conservation, but in this case, the protestations of the few, and loud, conservationists need to be balanced with the greater needs of the community. Gunalchéesh/thank you,	Good morning Mr. Divelbess, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/26/2023	M. McCammon	
1/26/2023	robin houston	To whom it may concern: As a part time resident of Haines, and frequent visitor to Juneau, I am writing in regard to the Juneau Douglas North Crossing PEL Study. In a time when fiscal responsibility is critical, I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. As a state and a nation, we face increasing problems that require attention, and money. Given that Juneau's population is stable or declining, the stated needs for this alternative route to N. Douglas are not convincing. In reality, this project is likely driven by the interests of developers seeing an opportunity to increase development in N. Douglas. Use of state and federal funds for such an effort benefit few, and these monies can be spent more wisely.	Good morning Robin, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/26/2023	M. McCammon	

		Thank you				
1/26/2023	Winston Smith, Stakeholder Advisory Committee Member and Juneau Audubon Society Board	Voicemail - Good morning. This message is for Morgan McCammon. My name is Winston Smith. I'm with the Juneau Audubon Society board. I'm calling to try to arrange a meeting between a subcommittee of the board of the Juneau Audubon Society with DOWL to discuss and offer comments in person regarding the second crossing. My number is [redacted]. When you get this message, I would appreciate your returning my call. Thank you.	Morgan returned this call. He said four board members would like to meet with the study team prior to the February 2, 2023, survey response deadline. Morgan is arranging this meeting.	1/26/2023	M. McCammon	Advisory committee comment

1/26/2023	Winston Smith, Stakeholder Advisory Committee Member and Juneau Audubon Society Board	Voicemail - Yes, good morning. It's Thursday morning, January 26th, a little bit after 9:00 o'clock in the morning. My name is Winston Smith. I'm a board member with the Juneau Audubon Society. I'm calling to try to arrange a schedule a meeting between a subcommittee of board members of the Juneau Audubon Society who would like to meet with DOWL in person if possible, and offer some comments and maybe have a brief discussion regarding the second crossing. And so I've reached out to Morgan, her direct number and was unable to reach her. Left a message. Thought I'd call the office and see if I couldn't speak with someone else and the receptionist or whoever it was that answered the phone transferred me to you. So again, my name is Winston Smith. My number is [redacted]. When you get this message and you have a moment, please give me a call back. I look forward to hearing from you. Thank you. Bye now.	See above	1/26/2023	M. McCammon	Advisory committee comment

1/27/2023	Annette Coomber	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. Here are the reasons why: — This project is uniquely susceptible to fatally flawed alternatives because of the tremendous wildlife, habitat, ecosystem services, recreational, and viewshed values of Taashuyee, the Mendenhall Wetlands. Again, alternatives which cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL process or in an Environmental Impact Statement. (Watch: The history of the refuge.) — The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the Salmon Creek, Mendenhall River, and Fish Creek estuaries. —There is not a demographic demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This places a particularly high burden of proof for a need for this project and is critical in weighing the relative importance of alternatives that cross the Mendenhall Wetlands. This project will likely increase community sprawl and create a services cost burden for all community members. — Alternatives that reduce the short-duration	Good afternoon, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. 1/27/2023	Gabriel Cohel	To whom it may concern: I am writing in regards to the second crossing proposed from Juneau to Douglas island. As a lifelong Juneau resident and current resident of North Douglas I OPPOSE building a second crossing. Not only do we not need it, it would impact my life on North Douglas in a negative manner. I am a sportsman and recreate on the wetlands during many seasons and I do not want it degraded or restricted by development. North Douglas residents do not want the second crossing. We choose to live here because it is further from town, we don't need another bridge bringing more crowds to our area. People who are sufficiently motivated to visit north Douglas can drive over the normal bridge. Do not wreck our recreation and natural food resources (fish and waterfowl) in the interests of a bridge no one needs. Thank you for your consideration,	Good afternoon Gabriel, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/27/2023	M. McCammon	Survey
1/27/2023	Joan Cahill	I guess from my subject line you get the drift. Of the many residents that call this area home, we humans are capable of eradicating so many others and planetarily we are doing just that. We must act locally, it's the best we can do. Salvage that precious habitat and leave it the heck alone, for crying out loud. Humans are mercifully reducing in numbers in this region. There is a word we need to learn: "enough". We have enough. Enough humans, enough places to live, enough stuff, enough roads. Leave the wetlands be, please.	Good afternoon Ms. Cahill, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Best regards, Morgan McCammon	1/27/2023	M. McCammon	Survey

		Those migratory and resident creatures who live there don't have enough. Let them be.

1/28/2023	Bob Saviers	Attached please find my survey letter. Bob Saviers To Whom It May Concern: This is in response to a survey asking for public input on second channel crossings. In my 65 years here and four generations in Juneau, this process gets predetermined at this point, and clearly should not be. Especially when folks vote on a color of a road in a survey on a sketch. This public comment period effort itself is inadequate to the local impacts but allows a process to move forward that checks the right box. It merely pushes people to lawsuit as it is so poorly thought out as survey for CBJ marketing. It clearly makes no sense to bring a crossing along to the Mendenhall Peninsula that should be on Sunny Point or industrial Boulevard, if anywhere at all. We've known this for 30 years even though it's needless as a guised transportation NHS or city highway anyway. It is for other reasons. I've dealt with public comments during my time. It's box checking for the public comment period for CBJ; that's all, and, in this case, it's dart throwing. Talking to many folks on Engineer's Cutoff and Fritz Cove Road revealed they knew little of this nonsense. By not going door-to-door on adjacent adjoining continuous contiguous landowners for comments, this is a desired vote not a survey. It is pushed by Chamber of Commerce and others who are not personally impacted. It is, however, for revenue-rewarded organizations that receive direct benefits from it. It helps CBJ politically to take an easy way out and appease vested interests and allow large developer parcel low-income housing tracts with their CBJ tract bonding desires on it. We know this. But truly, working folk just assume common sense says nah I don't have to state the obvious and don't	Good morning Mr. Saviers, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I'm glad you were able to get these comments to me. I have shared your comments with the project team and added you to the project contact list. We are working on a response. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	1/30/2023	M. McCammon	

		respond to these as the impacts are not stated. As a result, things like this get decided with little comment facing the citizenry. We assume common sense free from partiality will result, but it doesn't because there is little personal contact. Since this is the biggest impact area, the outreach effort should be much more. We do not have any big signs out here, no door-to-door by CBJ, Mayor's Office, etc. Morally, that is what needs to happen—takes some effort though. Like trying to appeal your assessment or subdivide property on Engineer's or Fritz Cove. You can't get through the first layer of brain tissue. It's odd that in lieu of high taxes, a Hospital in need of support , needed infrastructure and hydroelectric upkeep, garbage dumps, needed recreational hunting areas, a higher cost of living, higher property assessments, etc., that this is even in the works and is also patently absurd right now just to bring in tax revenue. We shouldn't do any of these crossings at all. But I know the process starts well before this; if FAA, for instance, has given preliminary permit approval prior to this report or funded the EIS and allowed the permits and/or studies, I will fight the north channel crossing to Mendenhall Peninsula with gusto for the same reasons the FAA did not reach out. We multi-generational families just do not trust the city's motivations in the town anymore. I also do not see the cost of a 50 million dollar bulb t bridge, impacts on Divac, local negative impacts on property, wildlife, eagles and their nests (of which I can see 2 from my house), green belts offered, fish creeks, hunting fishing, etc. It's a survey; I get it. But you've seen the responses of				

		these many times before. The survey lacks upfront impacts. Perhaps an EIS would help. Nothing like this poor planning effort would unite folks better and planning should be embarrassed. That is because of no upfront little or no thought to environmental impacts, no build areas, green strips or adjacent purchase options to local homeowners are even pre thought....and with little care to their lifestyle and what they've paid to have this lifestyle in too high assessments and property taxes, CBJ again divides the citizenry through poorly thought out schemes. CBJ would rather hang on to their mantle of preferential zoning and promoting sewer, bonds, lids, puds, privatized interests, etc. No trust in these folks. I will fight this, and the answer is no. Put the damn thing at Sunny Point. Bob Saviers

1/30/2023	Linda Blefgen	Dear Mayor and Assembly Members, The following are my concerns regarding the current attempt to establish a second crossing. To date there is still no community plan for North Douglas. Collaboration is essential for a quality product. An outcome that meets more than, what appears to be, a developers and chamber of commerce agenda thinly veiled with traffic and emergency service concerns. A thoughtful plan for North Douglas would include a long and short term plan for the larger Borough and reflect the needs for, housing, open space, access to water, transit, neighborhood visions, non-motorized paths, and recreation. Climate change is a variable that must be included in all discussions. What will future needs be and what is sustainable? Nothing I have read or heard indicates a current population increase or any future exponential population growth. Quite the opposite. The proposed crossing at the Mendenhall Wetlands is short sighted at best. Why is DOT determining community needs? It would appear a proactive CBJ would have a North Douglas community plan in place prior to the current crossing proposals. Access to development for whom? The proposed Pioneer Road development from what I have seen is for high end homes. What about development for local residents to own recreational cabins? A great opportunity for non-boating families. Thank you. Linda Blefgen	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

1/30/2023	Jan Crichton	I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. Here are the reasons why: — The Mendenhall Wetlands Refuge was set aside to protect and provide rest, food, and shelter for the migrating and resident birds, the rearing fish in the estuaries, and for public non-motorized use because of its extremely scenic beauty and open-space grandeur. It has a major value (well-documented) as a bird refuge, wildlife habitat, critical ecosystem mechanism, and is a recreational favorite (the most used trail in the Juneau area). Migrating birds fly hundreds and thousands of miles, exhausted, and depend on this open roadless estuary a safe harbor for much-needed food and rest. Some fly from as far as southern South America. Many fly on to Northern and Coastal Alaska to reproduce, and need this stopover in both directions. Again, alternatives which cross the Mendenhall Wetlands State Game Refuge are completely at odds with the serious purpose of this refuge and should not be advanced in the PEL process or in an Environmental Impact Statement. (Watch: The history of the refuge.) — Wetlands is a key word here - The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the critical Salmon Creek, Mendenhall River, and Fish Creek estuaries, which rear much of the salmon we expect to grow healthy and enter	Good afternoon, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	1/30/2023	M. McCammon	

		our saltwater, to fuel and sustain our commercial fishing econony and sport fishing tourism economy. Our salmon runs are already falling due to other stresses, and this could tip the remaining balance in the wrong direction. —There is not a demographic demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This places a particularly high burden of proof for a need for this project and is critical in weighing the relative importance of alternatives that cross the Mendenhall Wetlands. This project will likely increase housing density on North Douglas, creating a demand for new far-flung public services, at a cost burden for all community members. — Alternatives that reduce the short-duration traffic pressure on the existing Douglas Bridge and intersections should be evaluated, including non-crossing opportunities such as improved public transportation, and partial remote working hours or days for state and federal employees. — The expenditure of large amounts of federal tax dollars in a community that is not growing for a project which would expand the community footprint is, at best, questionable. Gunalchéesh/thank you,

1/31/2023	Marquam George	Greetings, I've been a North Douglas resident and property owner since 1979 residing between the 5 mile and 6 mile highway markers. I love North Douglas. I feel a second crossing could be a benefit if it's located correctly otherwise I see it more of a tragedy. The first three crossing options from the bridge; Eagle Creek, Salmon Creek and Sunny Point would be tragedies in my opinion. They provide a second crossing but they don't offer any relief in creating a large enough transit loop to ease growth. It's also disheartening to think how many households would need to be demolished in order to construct any one of these three crossings. Vandebilt Hill and Sunny Point crossing options are an affront to nature from my perspective. I routinely walk between channel markers 15 and 17. This area is one of the crown jewels of Juneau. From the North Douglas pavement it would be necessary to cross muskeg, old growth forest, and grass wetlands before reaching the channel. I can't see how the flora and fauna of this area could tolerate a second crossing and still be a jewel, These two crossings should be removed to preserve these unique ecosystems. The North Airport underground crossing is interesting, I'll leave it at that. I could support the Mendenhall Peninsula crossing. In the mid 1990's as a planning commissioner I spent close to two years with fellow commissioner's holding meetings updating the CBJ Comprehensive Plan. Much of our discussions focused on the future expansion of North Douglas	Good afternoon Marquam, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	1/31/2023	M. McCammon	

		and West Juneau. This is underway already with the many dollars spent constructing the new Pioneer Rd. I recall components within the Comprehensive Plan including construction of a deep water port that could benefit both cruise ships and barges. A walkable community much like Auke Bay was a part of the plan along with a second crossing that connected to the North Douglas Hwy near the boat ramp. If we have to have a second crossing, locating it near the boat ramp would provide more benefits than any of the other crossing options in my opinion. Respectfully,				

1/31/2023	Mendenhall Wetlands Study Group	See comment folder. Mendenhall Wetlands Study Group Second Crossing to Douglas Recommendations and Comments January 30, 2023	Hi Ron, Thank you for working with us to make sure we were able to get a copy of your comments. We appreciate the work the group has put into these. Additional Response Good morning Ron and Mendenhall Wetlands Study Group, Thank you again for the comments and your continued involvement in the PEL process. I forwarded these comments to the Environmental Team to assist with the response. The DOT&PF and DOWL Environmental Team includes environmental scientists, professional wetland scientists, archaeologists, fisheries biologists, hydrologists, and a host of other subject matter experts. They are currently evaluating more than 20 natural resources present in the project area and are developing a detailed document focused solely on these resources that will be a part of the final PEL Study. This document is not yet available to the public. It will be shared with the Advisory Committees and online when completed later this spring. The maps and data presented to the public and available on the website provide a basic level of detail so that the information is understandable for everyone. The final PEL will include the legal context and issues related to wetlands, including impacts to the Refuge, as well as all evaluated natural resources. It was announced in the January 3, 2023, Juneau Empire article that $7 million in federal money was	1/31/2023	M. McCammon	Advisory Committee Comment - Meeting 2

			earmarked to continue work on this project following completion of the PEL Study. This would include a full NEPA process, along with any other required environmental process. The NEPA process will be a comprehensive document that will likely assess a full range of alternatives, including an evaluation of effects to resources to determine which alternative meets purpose and need, are feasible, and comply with agency regulations. It is at this stage that formal agency consultation will occur. By engaging in the PEL process during the planning stages for a Juneau Douglas North Crossing, prior to the environmental processes beginning, regulatory and local agencies, as well as the public, have opportunities to help shape this transportation project by getting involved in the early stages of planning and raising concerns to the project team. The information you provided on environmental resource values is appreciated. Your local knowledge and context are exactly the kind of input we seek at this PEL study stage. Please let us know if you would like to schedule another meeting. Best regards,			

1/31/2023	Michael Stanley	Dear Ms. McCammon and JD North Crossing Study Team, Attached please find the comments of the North Douglas Neighborhood Association, Second Crossing Committee, on the PEL Study preliminary alternatives and the screening criteria outlined in your technical memorandum. If you have questions regarding these comments, or want to discuss NDNA's concerns in further detail, please advise. Thank you. Mike Stanley Chair, Second Crossing Committee NDNA See letter dated 1/31/2023	Good morning Mike, Thank you and the Association for the comments. We appreciate your input. Morgan McCammon	1/31/2023	M. McCammon	Advisory Committee Comment - Meeting 2
1/31/2023	Rueben Glaves	Hello, I am writing this to oppose further incursion into the limited and heavily inundated wetlands at the mouth of the Mendenhall river. We built an airport, they are developing some gas station and additional shopping space and now this major infill and impact to the wetland. Wetlands are critical habitat to birds and fish, this is going to add another major issue to an already degraded ecosystem merely for convenience sake. If a second crossing is really for safety sake then have it closer to the hospital, where it splits the difference between the valley and downtown while ensuring the fastest route to the hospital. I hope common sense prevails. Rueben	Good morning Rueben, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	1/31/2023	M. McCammon	

2/1/2023	Jeanette McBride	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. Here are the reasons why: — Any plans to cross the Mendenhall Wetlands State Game Refuge should not be advanced in the PEL process or in an Environmental Impact Statement. This refuge is too important for wildlife, habitat, and ecosystem services to be sacrificed for a bridge that might not be necessary. — The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the Salmon Creek, Mendenhall River, and Fish Creek estuaries. —There is not a demographic demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This places a particularly high burden of proof for a need for this project and is critical in weighing the relative importance of alternatives that cross the Mendenhall Wetlands. This project will likely increase community sprawl and create a services cost burden for all community members. It would be foolhardy not to reconsider this entire idea. — Alternatives that reduce the short-duration traffic pressure on the existing Douglas Bridge and intersections should be evaluated, including non-	Good morning Ms. McBride, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/2/2023	M. McCammon	

		crossing opportunities such as improved public transportation and area-wide housing density improvements. Improved public transportation should be the priority, as single occupancy vehicles are responsible for many problems, not just clogging the bridge. — The expenditure of large amounts of federal tax dollars in a community that is not growing for a project which would expand the community footprint is, at best, questionable. We have a responsibility to the future generations. Gunalchéesh/thank you,				

2/1/2023	Samuel Roberts	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. Here are the reasons why: — This project is uniquely susceptible to fatally flawed alternatives because of the tremendous wildlife, habitat, ecosystem services, recreational, and viewshed values of Taashuyee, the Mendenhall Wetlands. Again, alternatives which cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL process or in an Environmental Impact Statement. (Watch: The history of the refuge.) — The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the Salmon Creek, Mendenhall River, and Fish Creek estuaries. —There is not a demographic demand or need for this project. Gunalchéesh/thank you,				

2/1/2023	John W. Schoen, Ph.D.	I currently live in Anchorage but previously lived in Juneau from April 1977 to June 1989. I visit Juneau infrequently now. I do not think there is an economic justification for the North Douglas Crossing at this time. The priorities for this project do not compete with other Alaska transportation projects including the Marine Highway System, airports, or highway maintenance and construction. Further, the environmental impact of this project to the Mendenhall State Game Refuge, wetlands, shorebirds and waterfowl, and local anadromous fisheries would be substantial and do not justify a North Douglas Crossing. Thank you for the opportunity to comment on this significant transportation proposal. Sincerely,	Good morning Mr. Schoen, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/1/2023	M. McCammon	
2/1/2023	Rober and Gretchen Pederson	We are opposed to the proposal for the Juneau Douglas Second Crossing. There is no need for this in the immediate future, if ever, and we think that it would have tremendous negative impacts on the Mendenhall Wetlands State Game Refuge.	Good morning Mr. and Ms. Pederson, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/1/2023	M. McCammon	

2/1/2023	Ron Somerville	Morgan, the Juneau Shooting Sports Foundation has voted to support the document submitted by the Mendenhall Wetlands Study Group. I have attached another copy for your records if needed. If our tabulating votes, the Foundation has 9 members. Thanks Ron Somerville	Good afternoon Ron, Thank you for sharing this information about the Shooting Sports Foundation's support of the letter. Morgan McCammon	2/1/2023	M. McCammon	
2/1/2023	Ryan Beason, President Territorial Sportsmen President	Hi Morgan, Territorial Sportsmen Inc. supports the Mendenhall Wetland Study Group comments which have been previously submitted. Thank you for your time. -Ryan Beason, President Territorial Sportsmen President	Good morning Mr. Beason, Thank you for sharing the Territorial Sportsmen's support of these comments. We appreciate your continued involvement in the PEL study. Best regards, Morgan McCammon	2/2/2023	M. McCammon	

2/2/2023	Bruce Connery	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. The reasons are: — The alternatives fail to recognize the tremendous wildlife, habitat, ecosystem services, recreational, and viewshed values of Taashuyee, the Mendenhall Wetlands. As such, there is no reason to move ahead on the PEL process or with the development of the Environmental Impact Statement to consider crossing the Mendenhall Wetlands State Game Refuge. It is upon you to watch "The history of the refuge" before proceeding. — The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the Salmon Creek, Mendenhall River, and Fish Creek estuaries. —There is not a demographic demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This places a particularly high burden of proof for a need for this project and is critical in weighing the relative importance of alternatives that cross the Mendenhall Wetlands. This project will likely increase community sprawl and create a services cost burden for all community members. — Alternatives that reduce the short-duration	Good morning Mr. Connery, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. 2/2/2023	Jason Keedy	We do not need a second bridge. It will have significantly negative impacts on the north douglas community and will disrupt the sensitive habitats that wildlife depend on and Juneau community enjoys. There are zero reasons why we can't look into improved public transportation and area-wide housing density improvements, rather than this enormous expense that is environmentally degrading. The demographics studies show population trends are down, so why would we need	Good afternoon Mr. Keedy, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards,	2/2/2023	M. McCammon	

		to open up and disrupt a community treasure like North Douglas? Our Douglas community is against this and think this is a mistake.	Morgan McCammon			
2/2/2023	Kathy Coghill	To: DOT Date: Feb 1, 2023 Regarding: Second Crossing I bought my first house in downtown Douglas in 2001. More recently I moved out past mile 8 on North Douglas. In all my years of living on Douglas, crossing the channel 2x/day, 5 day/wk for work, I have never felt any need or any wish to have a second bridge across the Channel. Please note that I absolutely detest traffic congestion. I have no tolerance for it and that is why I live in Douglas. I live in Douglas solely because it is not congested compared to all the other greater Juneau options. The Dowl report (2022) is highly inaccurate in its characterization of "congestion" at the bridge. They exaggerate "a problem" which then can be "fixed" by a Northern crossing. This is misleading and does not provide for good decision making. During road construction on Douglas several years ago the congestion was bad, but that was due to temporary sections of single lane road (with flaggers and one-way traffic). It was not due to the normal density and flow of cars through the Douglas/Juneau corridor.	Good morning Ms. Coghill, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/2/2023	M. McCammon	

		That aside, a reasonable argument can be made that we need a second crossing for safety reasons. If the current bridge became damaged, those of us on Douglas could experience some hardship, especially those who are medically vulnerable. So, it is reasonable to plan for a second bridge, but not at the northern end of the channel where environmental and fiscal costs would be orders of magnitude greater. But wait!!! Before we go spending vast sums of money on redundancy for our channel-crossing ability, we need to focus on restoring fundamental, basic, and reliable ferry service to Angoon, Sitka, Pelican, Tenakee, Hoonah, and Gustavus. Given the recent (many-year) failure of the Alaska Marine Highway to provide the most basic service to these communities, DOT has quite a burden to prove that it has concern for the well-being of residents in this region. The number one priority for Southeast Alaska transportation must be to restore reliable Marine Highway transportation. Get that one right before launching into a back-up plan for the currently functional bridge across Gastineau Channel. Also, please show us this second crossing project is not just another grab for ever more development blight that makes a lot more money for a special few, while destroying the quality of life for the rest of us. Do the right thing and focus on the ferry system first. Then, and only then, if you move on to a second crossing, focus on resident safety and the health of our ecosystems, not on setting up developers for another sweetheart deal (which some might call disingenuous and self-serving).				

		The number two priority when considering transportation and the proposal for a second crossing, must be to choose the least expensive option with the least impact to wetlands. Impacts to wetlands must be kept to an absolute minimum when choosing the location for a second bridge. Given the expanse of wetlands that reach from the Mendenhall Peninsula all the way to Twin Lakes, the three most northern (western) alternatives should be categorically rejected due to the massive impacts to the wetlands (and due to the massive costs associated with choosing a much longer path for a bridge that requires damage to greater acreage at greater financial cost). That is a lose/lose prospect, and no additional time or effort should be wasted on fleshing out those alternatives. The only acceptable options to consider for a second crossing (after restoring ferry service) are those starting further south/east where the structure will be a fraction of the length of the northern options, thus greatly reducing both the fiscal and environmental costs. In Summary: 1) Top DOT priority for Southeast Alaska needs to be restoring fundamental and reliable marine highway service to Angoon, Sitka, Pelican, Tenakee, Hoonah, Gustavus. 2) A second crossing over Gastineua Channel is a luxury, and should not be pursued until the Southeastern portion of the Alaska Marine Highway is functioning at least as well as it did in the 1990's. 3) If a second crossing is pursued for safety reasons (assuming the Marine Highway has been			

		restored), it needs to stay out of the wetlands. Absolutely no ruination of any of the lands north or west of Lemon Creek should be tolerated under any circumstances. Thank you for the opportunity to comment. Kathy Coghill				

2/2/2023	MaryAnn Dierckman (sp?)	Hi Morgan and Nina, I took a phone call from MaryAnn Dierckman (sp?). She is wondering if it is possible for her to receive a copy of the survey she submitted. She included her name, so we may be able to find it. She was concerned that it wasn't clear where it is going after hitting 'done' and that there is no opportunity to have a copy, and no notification that it will be part of public record. She's also concerned that our outreach has been primarily web-based (email, website). She'd love to see us post a couple posters around town to catch more people that are not online. She mentioned the mall and libraries. Marie Heidemann	2/6/23 - Morgan shared Ms. Dierckman's survey response with Marie to pass on.	2/2/2023	M. Heidemann	

2/2/2023	Philip Pallenberg	I am writing to comment on the preliminary alternatives for the second crossing. My family and I live at 8830 North Douglas Highway, and the Sunny Point route would connect to North Douglas Highway very near our home. It is essential that all of the impacts of each of the alternatives be presented and considered equitably, on a level playing field. The language of the description of the preliminary alternatives gives me some concern about whether this is being done. For most of the alternatives, the description suggests a need to consider the impact on existing residents. For example, for Mendenhall Peninsula, it says that impacts to existing residential homeowners will be a key consideration. For North Airport, it says that there will be a need to explore alignment options that reduce impacts to residential properties on Douglas Island. And for Salmon Creek and Eagle Creek, the descriptions say that there may need to be right-of-way acquisition on Douglas Island. For the Sunny Point and Vanderbilt alternatives, by contrast, the descriptions say that the road may be able to connect to North Douglas Highway using CBJ property. There is no mention of any need to consider impacts to existing homeowners or a need to acquire properties for the right-of-way. I am concerned that this may reflect an assumption that, if the road itself passes over CBJ owned property, there will be no need for property acquisition, and no need to consider impacts to existing homeowners. If that is the assumption that is being made, it is incorrect.	Good afternoon Mr. Pallenberg, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/2/2023	M. McCammon	

		I am guessing that the CBJ-owned property that is being referred to with respect to the Sunny Point alternative is the CBJ property immediately to the east of our house at 8830 North Douglas (between our house and 8752 North Douglas). Even if that CBJ lot is wide enough for the road itself, building a highway over that property would destroy the quiet enjoyment of our property, and would drastically reduce our property value, for which the CBJ (or the State) would have to be financially responsible. I imagine there would be a similar impact to other homeowners in the area. The Sunny Point alternative cannot be fairly considered without looking at those impacts, and the cost of acquiring affected properties or compensating homeowners for their lost property value. I suspect the Vanderbilt alternative would have similar impacts on homeowners, even if the route goes over CBJ property. I would ask that the study recognize the impacts on nearby homeowners for all of the alternatives, and acknowledge the likely costs of addressing these impacts, even if the right-of-way itself passes over CBJ owned property. Thank you for allowing me to comment on the preliminary alternatives.				

2/2/2023	Rebecca Bellmore Science Director Southeast Alaska Watershed Coalition	Dear Ms. McCammon and the Juneau Douglas North Crossing PEL Study Team, The Southeast Alaska Watershed Coalition appreciates being included in the Juneau Douglas Crossing Stakeholder Advisory Committee and all your efforts on the PEL Study to date. The Watershed Coalition is committed to promoting community-based watershed stewardship that reflects and supports people's deep cultural and economic connection to the land and water in this region. The Watershed Coalition does not own land or have a financial stake in the ultimate outcome of the Crossing decision-making process. Rather, we are interested in ensuring that the best available information about potential environmental impacts informs the decision-making process, and that this information is shared effectively with the public, which may ultimately make the decision about whether or where to build a crossing. We have three key concerns and suggestions at this time: 1. Solicit meaningful feedback on alternatives and the assessment process: From our perspective, meetings to date have provided little substance for the Stakeholder Advisory Committee to respond to. Maps with approximate locations of potential crossings in the absence of any detailed information about land ownership, environmental context, or other potential restrictions/considerations have made it very difficult to provide much meaningful feedback on alternatives. Assuming similar information has been shared with the Technical Advisory Committee, we have concerns about how participants' expertise is being effectively solicited and incorporated into the alternatives assessment process. We strongly encourage the project team to meaningfully engage with relevant agencies and experts during Phases 1 and 2, giving them	Good afternoon Ms. Bellmore, Thank you for sending comments. We appreciate your participation in the Stakeholder Advisory Committee. Morgan McCammon	2/2/2023	M. McCammon	Advisory Committee Comment - Meeting 2

		sufficient time to assess information that is provided and contribute any new information/data that the planning team does not currently have access to. This will help to ensure that the best available data is being used, and expert knowledge can inform an assessment of how well alternatives "avoid, minimize, and mitigate impacts to the environment" and meet other project needs. 2. Broaden the assessment of environmental impacts beyond the project footprint: Linear feet of stream or acres of habitat impacted directly by the crossing may be similar across different options, but habitat quality, the species that utilize it, and its importance in the larger ecosystem cannot be captured with these metrics. Additionally, roads, bridges, and traffic impact ecosystems beyond their footprint by altering hydrologic dynamics, habitat character, and wildlife corridors. Just as impacts to and opportunities for residential and commercial areas are being considered in a community context, environmental impacts must be assessed beyond the footprint of the project. Engaging with relevant experts as suggested in comment 1 on these issues will provide insights beyond the number of (square) feet of habitat impacted. We strongly encourage the project team to explicitly incorporate a more thorough and scientifically valid assessment of environmental impacts in the assessment process. 3. Make data relevant to decision-making accessible to the Advisory Committees and public: We suggest that relevant GIS data that is being used to assess alternatives be made available (where legal) not only to Advisory Committees, but also to the public to help inform their assessment of potential impacts and benefits of potential crossings. A web map with relevant layers				

		compiled in one place would allow the public to explore potential impacts of the alternatives in a more meaningful way than current project maps provide for. Additionally, the recent traffic study has been repeatedly cited as supporting an important study need, but this data has not been shared with the Advisory Committees or the public (as far as we can tell). Having direct access to this study and underlying data would help people to understand more fully current traffic conditions, and, based on the origin-destination study, how much improvement could be expected from different alternatives. In summary, the Southeast Alaska Coalition suggests that appropriate experts be consulted in a meaningful way and have an opportunity to inform both the underlying data and the assessment process, that environmental impacts be considered more thoroughly than is currently proposed, and that the data that will be used to assess alternatives be made available to the Advisory Committees and the public in an accessible format. We believe taking these steps will help promote informed decision-making and responsible resource stewardship by the community as it determines whether/where to pursue a second crossing. Sincerely, Rebecca Bellmore Science Director Southeast Alaska Watershed Coalition				

2/2/2023	Stan Senner	Dear Madam/Sir: I am a former Alaska resident (Fairbanks & Anchorage) who often traveled to Juneau for work and who spent considerable time on Douglas Island. I am not now in a position to judge whether there should be a Douglas North Crossing, though I am not sure it makes sense economically and demographically. Regardless, my comment is that any alternative which crosses the Mendenhall Wetlands State Game Refuge should be removed from further consideration. I led development of and co-edited the Pacific Americas Shorebird Conservation Strategy, which you can find here: PASCSv2_english_final.pdf (pacificflywayshorebirds.org). The Mendenhall Wetlands are a critical part of the Pacific Americas Flyway, which extends from northwest Alaska to the southern tip of South America. Hundreds of thousands of migrating shorebirds en route to and from Alaska stop and use the Mendenhall Wetlands. Among them are declining species like the Western Sandpiper, and species of "high conservation concern" like the Hudsonian Godwit. Hence, the Mendenhall Wetlands are of far more than local importance. Although the residents of Juneau should and no doubt will have much to say about the proposed Douglas North Crossing, any actions (like a new bridge) that could impact shorebird populations (and other birds) and their habitats also must be considered in a national and international context. These migratory birds are shared resources, and hence there is a responsibility to consider the larger picture when evaluating alternatives for the proposed Douglas North Crossing.	Good afternoon Mr. Senner, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/2/2023	M. McCammon	

		I look forward to tracking this process and reiterate my opinion that no alternatives that involve crossing the Mendenhall Wetlands State Game Refuge should be considered further. Thank you for considering my opinion.				

2/3/2023	Tom Rutecki	To CBJ Assembly From Tom Rutecki please see my comments that are due today February 3 on the second crossing. It looks like CBJ Will be involved in this process in due time as it was when it came up for vote some years ago. I would just like to caution the assembly not to support any alternative that crosses through the wetlands.see my comments on AS 16.20.034, the Mendenhall Wetlands State Management Plan. If one of the alternatives is selected that goes through the wetlands there will be many years of litigation and it would be best to select other alternatives as I have in the last paragraph of my narrative. Bye Tom Thank you for the opportunity to comment on the North Crossing PEL Study Preliminary Alternatives. There is very sparse information provided on each alternative, which makes it difficult to review them. However, there are some general characteristics for the alternatives that can be used to prioritize which ones go forward to Level 2 screening in your process. The primary need identified for the crossing is alternate access and infrastructure resiliency. Alternate access would allow for access to emergency services, especially transport to the hospital, should the existing bridge be somehow blocked or compromised. The Scoping Document also states that an alternative should reduce traffic pressure on the Douglas Island Bridge and intersections. All of the	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		alternatives meet these needs in some fashion, except perhaps for the Downtown. Again, there is no design detail, but it seems likely that a situation compromising the existing crossing could also impact this alternative. For the other seven alternatives, there is a gradient to how well they meet the emergency access concern, especially in terms of medical transport. The two alternatives northwest of the airport would not improve transport times for the vast majority of Douglas residents, and would greatly increase transport time for this population if the current crossing was compromised. Of the alternatives southeast of the airport, the Salmon Creek crossing stands out the best alternative to provide reduced transport/response time, with it placing you at the intersection with the hospital. The alternatives also have a range of impacts or benefits relative to the additional goals identified for the projects. For example, there is a north to south gradient in how well the alternatives improve access to North Douglas Island to support economic development. I am particularly concerned with how well the alternatives “avoid, minimize, and mitigate impacts to the environment…” and “maintain the visual, cultural, and scenic identity of Juneau and Douglas Island.” It is difficult to overstate the ecological, environmental, and scenic importance of the wetlands encompassed by the study area. The Mendenhall Wetlands are a Globally Recognized Important Bird Area, providing				

		critical habitat for migratory and resident birds. The Wetlands are also important fish and wildlife habitat and heavily utilized by human hunters and fishers, as well as birders, dog-walkers, joggers, the list goes on. The scenic viewscapes are recognized in the Juneau Comprehensive Plan, including the view from North Douglas towards the Mendenhall Glacier and up Stephens Passage, and the view inbound from Egan towards Gastineau Channel. The State of Alaska recognized the importance of the Wetlands by establishing the Mendenhall the State Game Refuge. We also need to recognize that over 40% of the original wetlands have been filled and developed since the gold mining boom of the late 19th and early 20th century up until today. The incremental destruction and sectioning of the wetlands emphasizes the need for choosing a crossing alternative that has minimal impact on the integrity of the refuge and the ecosystem functions of the Wetlands. The best way to maintain the integrity of the refuge is to keep the crossing out of the refuge. In accordance with AS 16.20.034, the Mendenhall Wetlands State Management Plan specifies that the use for a public transportation corridor is allowed only if “there is significant public need for the corridor which cannot be reasonable met off-refuge”. For the Second Crossing, there are alternatives that could be designed so they do not encroach on the Refuge. Excluding Downtown, these are Eagle, Salmon Creek and the two				

		northwest alternatives. The other three alternatives (Sunny Point,Vanderbilt, and Twin Lakes) would directly impact the refuge. The amount of impact would vary with the type of structure, with earth-fill causeway causing the most damage from the fill, changes to the hydrodynamics of the tidal flows through the southern refuge, and forming barriers to fish, bird, and wildlife movement. These alternatives also would impact the scenic viewscape to a much greater degree than Salmon Creek or Eagle. By far the worst of these alternatives is the Sunny Point crossing in terms of environmental and scenic impact. The two Northwest alternatives could be designed to minimize wetland impacts, depending on how the entry/exit points are designed. By going under the Refuge, a North Airport tunnel could result in minimal environmental impact, as long as the entry/exit points were well upland. The Mendenhall Peninsulacrossing could be aligned to stay out of the Refuge at the Peninsula, then make landing west of the North Douglas boat ramp. As noted before, these alternatives best meet the perceived need for access to North Douglas development (and Eaglecrest from the valley), but are also lowest in terms of emergency access. The cost is also likely to be very high relative to other options. The Mendenhall Peninsula option would also disrupt the highly-valued viewshed and require significant development to provide access from Glacier Highway. Salmon Creek and Eagle are the best options to					

		minimize impacts to the Refuge and associated wetlands. Salmon Creek has the advantage of an existing interchange, and as noted early on, provides the best emergency access. Eagle is a bit more removed from the Refuge and viewscape, but would require a new intersection on Egan and as described in the alternative descriptions, could have avalanche issues. Of course, every mile south decreases savings in travel time to Eaglecrest and North Douglas relative to more northern alternatives, but those out- comes are a reasonable trade-off for the benefits of maintaining the integrity of the Refuge and the ecosystem processes that sustain it. In conclusions, I recommend the Eagle, Salmon Creek, North Airport, and Mendenhall Peninsula options move forward to Level 2 scoping. While I think that Salmon Creek is the best option, considering these four alternatives in detail would allow quantitative comparisons of the environmentally acceptable options in terms of emergency access, transportation facilitation, neighborhood impacts, and costs.				

2/3/2023	Charlie Martelle	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. Here are the reasons why: — This project is uniquely susceptible to fatally flawed alternatives because of the tremendous wildlife, habitat, ecosystem services, recreational, and viewshed values of Taashuyee, the Mendenhall Wetlands. Again, alternatives which cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL process or in an Environmental Impact Statement. (Watch: The history of the refuge.) — The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the Salmon Creek, Mendenhall River, and Fish Creek estuaries. —There is not a demographic demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This places a particularly high burden of proof for a need for this project and is critical in weighing the relative importance of alternatives that cross the Mendenhall Wetlands. This project will likely increase community sprawl and create a services cost burden for all community members. — Alternatives that reduce the short-duration	Good morning Mr. Martelle, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. Gunalchéesh/thank you,				

2/3/2023	Scott Pearce	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. Here are the reasons why: — This project is uniquely susceptible to fatally flawed alternatives because of the tremendous wildlife, habitat, ecosystem services, recreational, and viewshed values of Taashuyee, the Mendenhall Wetlands. Again, alternatives which cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL process or in an Environmental Impact Statement. (Watch: The history of the refuge.) — The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the Salmon Creek, Mendenhall River, and Fish Creek estuaries. —There is not a demographic demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This places a particularly high burden of proof for a need for this project and is critical in weighing the relative importance of alternatives that cross the Mendenhall Wetlands. This project will likely increase community sprawl and create a services cost burden for all community members. — Alternatives that reduce the short-duration	Good morning Mr. Pearce, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/3/2023	M. McCammon	

		traffic pressure on the existing Douglas Bridge and intersections should be evaluated, including non-crossing opportunities such as improved public transportation and area-wide housing density improvements. — The expenditure of large amounts of federal tax dollars in a community that is not growing for a project which would expand the community footprint is, at best, questionable. Gunalchéesh/thank you,				

2/3/2023	Chas Dense and Cristi Herren	To whom it may concern: Thank you for the opportunity to comment on the proposed Alternatives for the Juneau Douglas North Crossing PEL Study. We offer for your consideration our comments: PURPOSE AND NEED We realize Purpose and Need have already been reviewed. However, we believe some Purposes and Needs you have identified are really "wants" and should be considered as such. To us, the most important and appropriate Purposes and Needs are related to emergency response and public safety. We consider other purposes are in a "secondary" category and our comments are intended to reflect that. Further, we also believe that because there are reasonable alternatives that meet the Purpose and Needs and do not impact the Mendenhall State Game Refuge MSGR), those alternatives should be the only ones considered. In other words, mitigation efforts end at avoiding impacts within the refuge because there are reasonable alternatives. The refuge is the third largest tidal salt marsh area in Southeast Alaska and is already heavily impacted from development and subject to several mitigation efforts that may not even be located offsite and do nothing to help the refuge retain its productivity. ALTERNATIVES THAT SHOULD BE CONSIDERED The following alternatives will avoid impacts to the Mendenhall State Game Refuge and should be the only alternatives that move on to the Level 2 Screening Process.	Good afternoon Mr. Dense and Ms. Herren, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/3/2023	M. McCammon	

		1) NO ACTION 2) SALMON CREEK Salmon Creek is our Preferred Alternative. We believe this alternative best meets the Purpose and Needs for emergency response and public safety. It provides the most direct route to the hospital and is on the Mendenhall Valley side of the Mount Juneau slide area which would provide downtown and Douglas Island with an alternative access to the hospital in case all direct access is along Egan Drive and Glacier Highway cut off. There certainly would be impacts to anadromous fish habitat and mitigation would be necessary. However, this is also the most expedient access to the hospital which best meets the most important emergency and safety purposes and needs of all the other alternatives. This alternative also reduces by about 7 miles (3.5 miles each side of the Juneau-Douglas bridge) for those wanting quicker access from Mendenhall Valley to Douglas Island. 3) EAGLE CREEK This is not likely a realistic alternative, given the fact that it is within part of the Juneau avalanche zone. 4) DOWNTOWN If the project process eliminates all the other alternatives, expansion of the existing bridge or a new adjacent bridge could at least satisfy some secondary needs of releaving congestion. ALTERNATIVES THAT SHOULD BE DROPPED FROM CONSIDERATION TO AVOID IMPACTS TO THE MSGR				

		1) NORTH AIRPORT As intriguing as a tunnel seems, this alternative would probably result in the longest distance and time to reach the hospital of all the other alternatives. Further, the long term demographic forecast does not indicate any significant population growth that would create sufficient demand for significant population growth further out Douglas Hiighway. It would also cause significant impacts to the MSGR. 2) SUNNY POINT AREA This Alternative would cause significant impacts to the MSGR and likely create significant opposition and perhaps litigation and delay. It also could go through lands managed by the Southeast Alaska Land Trust where mitigation is likely to be difficult, if not impossible. 3) VANDERBELT This Alternative would cause significant impacts to the MSGR and likely create significant opposition and perhaps litigation and delay. 4) TWIN LAKES This Alternative would cause significant impacts to the MSGR and likely create significant opposition and perhaps litigation and delay. Sincerely,			

2/3/2023	Cinda Stanek	To Whom It May Concern, Following are my comments concerning the Juneau Douglas North Crossing, a.k.a. the Second Crossing. I appreciate the opportunity to provide input. • North Douglas Resident Input North Douglas residents need to be considered and need to have a significant voice in the second crossing discussions, process, and beyond. The potential impact to North Douglas residences and neighborhoods is huge. • Justification For The Second Crossing Throughout the process, several justifications have been given for a second crossing. However, a priority justification has not been clear. If the priority is for developable land on the backside of Douglas Island, I submit the population of Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. Our population projections do not support development of more remote lands, including the services cost burden for all community members. If the priority is for a back-up bridge and access to emergency services, the northern bridge alternatives would have unacceptably long access times to emergency services for the 5,000+ residents on the island. The furthest north crossings could create a deadly amount of EMS transport time for the majority population of Douglas Island residents (Douglas and West	Good afternoon Ms. Stanek, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/3/2023	M. McCammon	

		Juneau). • Bench Road The evaluation and planning of a second crossing must go hand-in-hand with the planning of, and funding for, a bench road on Douglas Island. DOT&PF has stated the current North Douglas Highway cannot handle the increased projected traffic that would result if a second crossing was built. The current highway is not adequate for carrying today's level of traffic, let alone the increased traffic a second crossing would add. • Mendenhall Refuge and Mendenhall River Estuary The Mendenhall State Game Refuge and the Mendenhall River estuary must be protected from any second crossing development. This includes development on, under, or adjacent to these fragile and important ecosystems. Development should not impact these lands and waters in any way – they should not be the least bit compromised. Thank You,				
2/3/2023	Cricket Keedy	I feel like there is an underlying Reason for this that is not being mentioned. Not to mention the population is not growing and the negative environmental impact. Living in Juneau and Douglas is one of the purest and most beautiful experiences I have had. The wild life ,the peace. There is so much to consider. Please consider the many lives that will be impacted animal ,human,and land . This is a beautiful place we don't need more city	Good afternoon Ms. Keedy, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards,	2/3/2023	M. McCammon	

		Thank You,	Morgan McCammon			
2/3/2023	Fred Hiltner	To Whom it May Concern: I live on North Douglas Island and have lived here for thirty-five years. North Douglas is a special place that is unique in the world. Its 53 square miles is bordered by a protected wetland refuge on one side, and Stephens Passage on the other. It is full of a huge variety of wildlife- from wolves and bears to swans and many other migratory birds. Truly, it is like no other place in the world. Let's be careful while we consider disrupting this unique community. Unless there was truly an overarching issue of access, a bridge that will damage the wetlands forever, overload an already crowded highway, and change the character of North Douglas for generations to come would be an irreparable mistake. I have talked to many North Douglas residents about a second crossing. All I have talked to oppose the second crossing. Some on the mainland call out that we need quick access to the hospital. Rather than true concern, this comes across as self-serving. Please don't say you are doing it for us! We oppose it!	Good afternoon Mr. Hiltner, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/3/2023	M. McCammon	

		North Douglas residents have accepted the risk of the remote possibility of an emergency arising if the Douglas Bridge is ever compromised beyond use. And, if that sort of situation did arise, there are plenty of helicopters, boats, and floatplanes to solve that sort of emergency while repairs are made. We don't need you to build a bridge to save us. Especially one that would damage the Mendenhall State Game Refuge. It would be unnecessary, harmful, and potentially illegal to build a crossing that would disrupt the Mendenhall State Game Refuge. This unique wetland supports thousands of migratory birds, spawning salmon, deer, and many other species. Any crossing built above or below the wetlands could create catastrophic damage to this irreplaceable wildlife corridor. Please do not build a second crossing. And if you choose to, against the wishes of many living in the North Douglas community, protect the ever-shrinking wildlife critical habitat currently protected in the Mendenhall Wetlands Wildlife Refuge by building it outside the refuge. Sincerely,				

2/3/2023	Hannah Schlosstein	Hello Morgan, Can you please remove me from this email list? Thanks! On Fri, Feb 3, 2023 at 13:48 Morgan McCammon <mmccammon@dowl.com> wrote: Good afternoon Technical and Stakeholder Advisory Committee Members, Thank you for your continued participation on the Advisory Committees. We would like to invite you to a combined meeting on Tuesday, February 28, 2023, 4:00-6:00 p.m. via Zoom. An agenda will be sent prior to the meeting. 2/3/2023	Karen Crandall	Thank you for taking into consideration my attached observations and concerns about the need for and siting of a potential second Gastineau Channel crossing. Observations/comments about a 2nd Channel Crossing especially about the option of building a crossing north of the airport or crossing from the Mendenhall Peninsula to Douglas Island We have lived on Fritz Cove and North Douglas for over 39 years. We moved here because we enjoyed living out-of-town. We have driven down North Douglas Highway and across the bridge nearly every day for 40 years and have only been delayed at the bridge on several occasions. We enjoy the relative quiet, the beauty and wildlife viewing living here offers us. Every day I am privileged to look out my window and see hundreds of ducks, geese, gulls, eagles and to enjoy watching the antics of seals, otters, sealions. I am mesmerized by the humpback whales and orcas that frequent the cove. When we first lived here ours were some of the very view crab pots in the cove, you would see some small skiffs, a few kayakers and an occasional fishing boat entering or exiting the channel. Fritz Cove has definitely been discovered in more recent years. It seems that everyone enjoys the cove for the same reasons I do. One day last summer I counted 175 crab pots in the cove. This year on the last day of October, I saw a kayaker paddling in front of my house with a crab pot on the bow of this kayak. It always amazes me how many people fish for king salmon (released in Fish Creek by DIPAC) in June when fishing for kings is closed in most other areas. You see people fishing from kayaks, canoes, row boats, rubber rafts, small skiffs, larger boats and on some days from too many charter boats. From my porch I have counted	Good afternoon Ms. Crandall, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/3/2023	M. McCammon	

		more than 50 vessels fishing at the same time. This summer I was working on my gardens and heard the familiar sound of the blow of a Humpback whale. I went down to my deck to watch it and was stunned to see how many boats were there fishing, pulling crab pots and watching the antics of the whale. Everyone including the many tourists on several whale watching boats were enjoying the show. I was relieved to see that the whale was not particularly disturbed by the crowd. I was slightly concerned for the many kayakers from a tour group who did not seem phased by a feeding, surfacing and "spy-hopping" whale so close to them. In the fall duck hunters use the area. The Entrance Point - Fish Creek area offers walkers, dog walkers and families a close by, relatively pristine area where they can recreate, enjoy its beauty, productivity and wildlife viewing. This area has often been recommended to be included in the Juneau's park system. The nearly unobstructed view of the glacier from a boat in Fritz Cove or from the boat launch seems to be a favorite image used in tour operator brochures and is similarly enjoyed by residents. Camera shots from the area are beautiful. Even in the winter on a clear night you can drive to the boat launch, walk the beach and have one of Juneau's best views of the Northern Lights. With the exception of the lights from a cell phone tower, the view is very free of light pollution. A bridge would take this away too. Fritz Cove is a beautiful productive cove inside the boundaries of the Mendenhall State Game Refuge that would be ruined with the presence of a bridge. Wildlife would be disturbed and probably displaced. Fisherman might lose their very close and relatively protected cove to fish for salmon (including chinooks) and to set pots for Dungeness crab. Kayakers, rowers, paddle boarders would				

		lose a year-round protected place to enjoy their sport. Most of us moved to Juneau and have stayed here because we love the area, the environment and the wildlife viewing opportunities that an area like Fritz Cove gives us. I hope this is not destroyed. 2/3/2023 If a new crossing is really needed than I hope that it will be placed in an area that is already disturbed and would resolve some of the perceived issues that currently exist. I would prefer seeing any funds available be used to maintain and improve existing infrastructure. Building a bridge beyond the airport would not resolve congestion issue on the current bridge but only further congest traffic on North Douglas Highway. The location of any second crossing would require building a bench road or making significant improvements to the existing highway. Emergency transport to the hospital for most North Douglas residents would not improve by building a bridge north of the airport. Building a second crossing at Salmon Creek, Twin Lakes or Vanderbilt Hill intersection would probably best relieve some of the perceived problems with the single existing crossing. I attended the Zoom meeting on May 11th and to the pop-up Listening Session at Eaglecrest on September 17th. I appreciated the opportunity to talk to your staff at Eaglecrest and to express some of my observations and concerns. Thank you for taking my thoughts and observations into consideration into your planning.				

2/3/2023	Laurie Craig	Please see my attached comments. Thank you. See attachment dated 2/3/2023	Good afternoon Ms. Craig, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. 2/3/2023	Mary Irvine	Dear Marie Heidemann, DOT&PF Project Manager, Irene Gallion, CBJ Liaison, and Nin Keller, DOWL PEL Assistant Project Manager and the North Crossing Planning and Environmental Linkages Study Team, Thank you for the opportunity to comment on the proposed transportation corridor to connect Juneau with Douglas Island. My comments are as follows: Congestion could be minimized with the building of a second bridge close to the existing bridge. Once the second bridge is built, one bridge could be two lanes of traffic in one direction, and the other bridge could be two lanes of traffic in the other direction. This would meet the intended purpose of minimizing congestion on the existing Douglas Island Bridge, and alleviate concerns about safety and emergency response in the event of a bridge closure. This would avoid impacts to the Mendenhall Refuge and not add unreasonable visual or safety impacts. One alternative that is missing among the range of alternatives is simply improving the current bridge, by widening it, and improving the safety of it. This should be included in the proposal. The project should avoid increasing traffic on North Douglas Highway which is a residential street. Daily, children in small groups or alone, wait in the rain for their school bus. Deer and dogs dart out or cross the road. Mail is delivered and traffic swings wide to avoid hitting people backing out of their driveways or pulling up to their mailbox to check for the newspaper. During the summer, traffic can get intense, with tour buses heading to Eaglecrest,	Good afternoon Ms. Irvine, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Additional Good morning, Mary. The next public open house is scheduled for summer 2023, we will share the date and location when set. Thank you.	2/3/2023	M. McCammon	

		fishermen hauling boats to the boat ramp, or buses taking visitors to helicopter and other venues. To plan for 7 alternatives without realistically addressing this issue of increased traffic is irresponsible. Tools exist to allow estimations to be made, studies can be done. The Study briefly mentions the purposes of development of residential, commercial, industrial, and port development at west Douglas Island as an idea raised by previous studies. The deep water port on the west side of Douglas Island appears to be the overriding purpose for several of the alternative crossing locations – the two on either side of the airport, as well as the one from the Mendenhall Peninsula. As such, these alternatives deviate from the main purpose of this current crossing study, which is to move traffic from the Valley to Douglas and from Douglas to the Valley. To muddy this current study with the three crossing alternatives (2 on either side of the airport and the Mendenhall Peninsula crossing) is outside of the current project's scope and confuses the project. These three options should be deleted from the current project alternatives so that the public and project managers can focus on more realistic and purpose-related goals. If the deepwater port on the west side of Douglas is really the focus of this study, please state that, and place it on a map for the public to consider. The Study does not address added traffic to the North Douglas Highway in a realistic manner. This is extremely important, because an added corridor will greatly impact residents of Douglas. The Study should explore each of the alternatives both without and with the construction of a Bench Road.			

		A Bench Road might assist in alleviating the traffic congestion that will be levied on Douglas residents by any of the alternatives, but it is difficult to assess without even a conceptual narrative to go along with even one of the alternatives. Further, it is unclear why the Bench Road drawn in on the Study maps only attaches to the existing bridge, and it is baffling to try to understand why the Bench Road ends where it does on the maps offered: in a residential area on North Douglas. I am opposed to each alternative north of Twin Lakes: I am opposed to Vanderbilt because of its negative impacts on the Refuge. I am opposed to the Sunny Point alternative because of its negative impacts on the Refuge. I am opposed to the North Airport alternative because of its negative impacts on the Refuge. I am opposed to the Mendenhall Peninsula alternative because of its negative impacts on the Refuge. I am also opposed to the Mendenhall Peninsula alternative because of the many negative impacts it would have on the residential neighborhoods of the far north of Douglas Island, including impacts to the viewshed, impacts on easy of mobility (congestion) and increase in traffic accidents, lights, noise, and diminished natural habitat. I am opposed to any alternative which is located inside or above the Mendenhall Wetlands State Game Refuge. The wildlife refuge is one of four crucial migratory bird wetlands in Southeast Alaska, and each alternative located north of Twin Lakes will unreasonably negatively impact the wildlife, fish, and people who use this refuge. Because reasonable corridor options are located				

		closer to downtown, the superior public need for this refuge as it exists currently must be respected. No consideration is given to the current cultural uses made of the small islands within the Mendenhall Refuge. Instead, engineers at the open house freely admitted that they would plan to "land" or attach parts of the bridge to available existing islands. Cultural use is being made of these islands, upon which spruce trees between 60 and 75 years of age have established themselves. Project staff at the open house dismissed questions regarding consideration of cultural investigations, stating "we've done and are doing studies, you just don't get to know about them." This condescending attitude should be corrected by the next open house. The Mendenhall Peninsula alternative would negatively affect an important anadromous fish stream at Fish Creek, and also important pooling areas for salmon before the fish migrate upstream. The cove between Entrance Point to north of the North Douglas Boat Ramp is also an important area for crab and herring and would be negatively affected by the Mendenhall Peninsula crossing option. The Mendenhall Peninsula alternative would negatively affect the important viewshed of the north end of Douglas Island. This viewshed is specifically noted as an important viewshed in the CBJ Plan of 2013. The Mendenhall Peninsula alternative as presented on the map has an egregiously large swath of				

		impact area which does not allow the affected public to discern what is intended by the proposal. Where would this corridor "land" on Douglas? The map covers several miles of north Douglas coast in a purple color, whereas each other alternative is specific where on Douglas the bridge and road would be. This must be defined before the public can be expected to comment on it. The Mendenhall Peninsula alternative seems to connect to Douglas Island within the Fish Creek Park. This must be a mistake on the part of the project planners. This "resilient little park" as the municipal interpretive signage calls it, is one of the hidden jewels of the municipality. It is reachable by municipal bus, is one of the wildest parks closest in to downtown Juneau, and contains valuable fish and wildlife habitat as well as recreational value because of its largely wild characteristics. It has been envisioned, crafted, set aside, monitored, planned for, protected, and used by a growing number of people: thousands of people annually for many years. Its estuary and natural habitat is important not only for fish, but provides one of the singlemost important feeding and nesting areas for bats in all of Southeast, a massive population of boreal toads, and several species of owls. Year-round this Park is used by school groups, tourism groups (commercial kayak tours, hiking tours, fishing tours), residential neighbors, fishermen, hockey players, berry pickers and dog walkers. Nearly all of these users comment favorably on the de minimus lighting in the area which allows the natural character of the Park to remain dark and wild. The Mendenhall Peninsula alternative would be the tallest alternative possibly 100 feet off of Fritz				

		Cove, and would negatively impact the viewshed irreparably. The Mendenhall Peninsula alternative would negatively impact the quiet character of the North Douglas highway walking experience, between the North Douglas Boat Ramp and the Outer Point parking lot. Hundreds of people use this stretch of the highway year-round for walking exercise, bicycling, running, and even commercial segway tours. The increased traffic would negatively impact this area, and create congestion that would negatively impact the safety of the public who use this stretch of highway now. Finally, the name of this study is slightly offensive. When did this project change from the "Second Crossing" to the "North Crossing"? This presupposes a preferred alternative, and that is pernicious. Please consider changing it back to the Second Crossing in the near future. Thank you for the opportunity to comment. Please do not publish my phone number in public documents. Thank you, Additional comment Thank you Morgan! Has a date for the next open house been set yet?				

2/3/2023	Tom Rutecki	I recommend the Eagle, Salmon Creek, North Airport, and Mendenhall Peninsula options move forward to Level 2 scoping. While I think that Salmon Creek is the best option, considering these four alternatives in detail would allow quantitative comparisons of the environmentally acceptable options in terms of emergency access, transportation facilitation, neighborhood impacts, and costs.	Good afternoon Mr. Rutecki, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/3/2023	M. McCammon	
2/3/2023	Gary Mendivil	From an air quality perspective, alternatives 1 and 2 fall within the Mendenhall Valley PM10 Maintenance area (see the attached PM10 boundary kmz file). Hence, if you decide to go with any of these two alternatives, you would need to meet the transportation conformity requirements per the Clean Air Act. However, to make an informed decision on the need for conformity analysis when the preferred alternative is chosen, the department would need set up an interagency conformity meeting. Only the members of the interagency committee, including the EPA, DEC, DOT&PF, FHWA, and FTA, can provide guidance on the conformity determination.	Good afternoon Mr. Mendivil, Thank you for providing comments. We appreciate your involvement in the PEL process. Morgan McCammon	2/3/2023	M. McCammon	

2/3/2023	Matthew H. Robus	Comments re North Crossing PEL Study First of all, I should state that I do not oppose the idea of a “second crossing,” although I am not sure that one is necessary, compared to other needs in Juneau. Arguably, the planning and design of a “Douglas Island bench road,” which would prepare the corridor along the east and north shores of the island for increased traffic and protect the local neighborhoods along North Douglas Highway from high speed through traffic, should precede planning for a crossing. My comments about the PEL study are about both the process to date as well as the choices to be made: Process To give an idea of my involvement, I have participated in a North Crossing PEL listening session, public stakeholder meetings, an open house, and a special meeting between staff and the Mendenhall Wetland Study Group. At my first exposure I was dismayed that the Mendenhall Wetlands State Game Refuge (MWSGR) was not depicted on the maps defining the study area and have been disappointed ever since that those boundaries have not been added. For a process with "Environmental Linkages" embedded in its title this has seemed curious to say the least. By definition the MWSGR contains not only significantly valuable natural resources but also presents extra regulatory hurdles for any development; it was a mistake to encourage the public to nominate crossing routes without showing them a legislatively designated special area that would be affected, and which would in	Good afternoon Mr. Robus, Thank you for providing comments. We appreciate your continued involvement on the Committee and in the PEL process Morgan McCammon	2/3/2023	M. McCammon	Advisory Committee Comment - Meeting 2

		turn affect the authorization of a route. From the beginning I have repeatedly questioned the absence of the refuge boundaries on the PEL map handouts and have been politely told by staff that the MWSGR boundaries existed in one of the layers in the map book available at the meetings. Maybe so, but my point is that most people didn't leaf through the map book when making their route decisions, and if they used a map at all, it was the study area handouts, which were silent on the matter of a wildlife refuge. The airport was depicted (I assume) because it obviously affected route choices; the decision not to depict another legislatively designated special purpose area (the MWSGR) within the study area seems arbitrary, and likely led people to favor routes across the refuge in ignorance of its extent and its management paradigm. Did people drawing routes understand that state regulations require that off-refuge alternatives be preferred? Probably not. If I understand the process correctly, the idea was to collect ideas for crossing routes based entirely on the purpose and need statements, with environmental and other considerations to be used to screen out problematic alternatives. The problem is that the array of route alternatives, gathered without adequate revelation of MWSGR's extent or purpose, will now be screened away from the public eye using environmental and other factors, leading to a reveal sometime later this spring/summer. Given that the MWSGR boundaries were not prominently included in the information which was a basis for forming proposed route alternatives, the planning team has forfeited a certain amount of credibility in the proceedings. Route Choices				

		My route recommendations are based upon 30 years as a professional wildlife biologist, 8 years as ADF&G's Juneau Area Biologist, and 4.5 years as Alaska's chief wildlife manager, as well as 31 years as a Juneau resident. The Mendenhall Wetlands State Game Refuge and the surrounding Mendenhall Wetlands constitute an extraordinarily important area for the production and sustainment of a wide variety of fish, bird, and mammalian species and support a wide array of public recreational uses. The benefits of these habitat resources extend regionally well beyond the refuge boundaries. These values are important enough that the state regulations regarding the MWSGR require that off-refuge transportation corridors be sought in preference to routes transecting the refuge. Accordingly, I oppose all route proposals that would cross the Mendenhall Wetlands State Game Refuge on the surface. The deleterious effects of such a crossing can be seen in other submittals to this request for comments, but include habitat alteration, disturbance, tidal and freshwater inputs, altered human use patterns, viewshed impacts, etc., not to mention the effects of increased traffic along North Douglas Highway. Viable route alternatives in my view include Salmon Creek, Eagle Creek, and Downtown, which all offer alternative access to Douglas Island in the case of the existing bridge being blocked for some reason, and facilitate EMS access. I personally don't believe that affordable housing is a valid reason for a second crossing and suspect that much of the enthusiasm for a crossing is for access to developable land and for convenient access to				

		Eaglecrest. Protection of the integrity of the MWSGR steers my choices for route alternatives to the area from Salmon Creek to the existing bridge. The Mendenhall Peninsula option, if constructed so as to avoid the area around the mouth of the Mendenhall River, an especially important area biologically, could also be a viable option. Thank you for the opportunity to provide comments on this important issue. Matthew H. Robus				

2/3/2023	Sarah Markegard (she/her) Fish and Wildlife Biologist Southern Alaska Fish and Wildlife Field Office Alaska Region | U.S. Fish and Wildlife Service	Hello, Thank you for the opportunity to provide comments on the screening process and preliminary alternatives for the JDNC PEL Study, and for the coordination call earlier this afternoon. I have attached questions and recommendations on behalf of the US Fish and Wildlife Service; please let me know if clarification is needed. I am happy to assist throughout remainder of the screening process. Sarah See letter dated 2/3/2023	Good afternoon Sarah, Thank you for providing comments. We appreciate your continued involvement on the Committee and in the PEL process. Morgan McCammon	2/3/2023	M. McCammon	Advisory Committee Comment - Meeting 2

2/3/2023	Randal P. Vigil Project Manager Regulatory Division	Ms. Marie Heidemann, The U. S. Army Corps of Engineers (USACE) has reviewed the proposed Juneau Douglas North Crossing Planning and Environmental Linkages (PEL) study. This email provides the USACE comments on the PEL study. Project Purpose: The definition of overall project purpose is used in the determination of practicable alternatives since the Environmental Protection Agency's 404(b)(1) Guidelines (Guidelines) define practicable to mean: "available and capable of being done after taking into consideration cost, existing technology, and logistics in light of the overall project purposes (40 CFR 230.10(a)(2))." While the definition of overall project purpose is solely the USACE's responsibility, it must take into consideration the applicant's stated purpose for the project (July 2009, Army Corps of Engineers Standard Operating Procedures for the Regulatory Program.). If a permit applicant has limited their purpose in such a way that the alternatives analysis would be constrained, then the USACE will re-define the overall project purpose in order to allow for consideration of an appropriate range of alternatives. The PEL and any future NEAP document purpose statement should allow for the generation of a range of alternatives for a meaningful analysis under the Guidelines. Alternative Analysis: Clean Water Act (CWA), Section 404 permits are only issued for projects that clearly demonstrate compliance with the Guidelines. The Guidelines state that no discharge of dredged or fill material can be permitted if there	Good afternoon Mr. Vigil, Thank you for the comments. Thank you for providing comments. We appreciate your continued involvement on the Committee and in the PEL process. Morgan McCammon	2/3/2023	M. McCammon	Advisory Committee Comment - Meeting 2

		is a practicable alternative to the proposed discharge that would have less adverse impact on the aquatic ecosystem, as long as the alternative does not have other significant adverse environmental consequences. In those cases where non-water dependent work is proposed in a "special aquatic site" (such as wetlands, eelgrass beds, or mudflats), practicable alternatives are presumed to exist unless clearly demonstrated otherwise by the applicant. Also, where a discharge is proposed for a special aquatic site, all practicable alternatives to the proposed discharge which do not involve a discharge into to a special aquatic site are presumed to have less adverse impact on the aquatic ecosystem, unless clearly demonstrated otherwise. An alternative is considered practicable if it is available and capable of being accomplished after taking into consideration costs, existing technology, and logistics in light of the overall project purpose. The least environmentally damaging practicable alternative may include construction in upland, reducing the size of the proposal to the minimum discharge necessary for the project, or the inclusion of logistic and operational controls. The PEL and any future NEAP document should clearly outline the site selection/screening criteria for the practicability for the alternatives considered. Examples may include: criteria related to availability (i.e. available for acquisition, zoned appropriately or potential for re-zoning); cost (i.e. reasonable acquisition or development costs); technology (i.e. whether existing technology is available to address any site constraints like steep topography); and logistics (i.e. location of parcel				

		within certain distance of particular facilities/city boundaries/highway and/or utility infrastructure; adequacy of parcel size; availability of utilities; availability for access, etc.). Consider establishing criteria that are minimum/maximum or pass/fail (e.g., at least 15 acre size (minimum size); ability to connect to utilities (sewer, electricity) (pass/fail). Evaluation for compliance with the Section 404(b)(1) Guidelines: Under the 404(b)(1) Guidelines, no discharge can be permitted if there is a practicable alternative with less adverse impact on the aquatic environment, unless the alternative has other significant adverse effects on the natural environment (40 CFR § 230.1 0(a)). In addition, no discharge can be permitted under the Guidelines if it would, individually or cumulatively, cause or contribute to significant degradation of waters of the United States (U.S.), or violate other applicable laws, such as State water quality standards, toxic effluent standards, or the Endangered Species Act. The Guidelines also state that no discharge in wetlands shall be permitted unless appropriate and practicable steps have been taken which will minimize potential adverse impacts of the discharge on the aquatic ecosystem. In determining whether the proposal complies with Guidelines, the USACE must assess potential impacts on the aquatic ecosystem, including substrate, suspended particulates/turbidity, water, current patterns and water circulation, and normal water fluctuations. Information regarding these factors should be included to evaluate these impacts.				

		Potential impacts to wetlands should be included in the analysis. In order to assess impacts to wetlands, a range of design for a proposed second crossing near Juneau to connect with Douglas Island, any alternative that requires the "Bench Road", transportation improvements for non-motorized users and transportation related energy consumption reduction, and transportation improvements for infrastructure resilience and reduction in traffic pressure on Douglas Island Bridge and its intersections. Potential impacts on the human use characteristics (subpart F 40 CFR 230.50) should be addressed including recreational and commercial fisheries, water-related recreation, aesthetics, including wildlife refuges. In order to evaluate possible contaminates in dredge and fill materials, a pre-testing evaluation should be conducted to determine if there are sources of contamination and harmful quantities to the aquatic environment by man-induced discharge activities (subpart G, 40 CFR 230.60). An example specific to this project are naturally occurring deposits of acid generating rock and arsenic within the proposed project area, however the other potential sources of contaminates should be examined as well. The PEL and any future NEPA document should include analysis of effects to populations of fish and wildlife, alteration of substrate, water levels, water flow, water quality, migration corridors, food supply, a change in breeding and nesting areas, and animal travel corridors associated with aquatic ecosystems.				

		Under the USACE's substantive evaluation criteria for all CWA, Section 404 permits, the Guidelines, mitigation is a sequential process of avoidance, minimization, and compensation. Compensatory mitigation is not considered until after all appropriate and practicable steps have been taken to first avoid and then minimize adverse impacts to the aquatic ecosystem. Only upon clear demonstration of compliance with the first two steps in the mitigation sequence does the Corps take the third step, which would be addressed during the review of a DA permit application for the proposed undertaking, should one be submitted. Avoidance measures are the planning strategies that entirely eliminate the discharge of fill material into the aquatic ecosystem to achieve the project purpose. A key requirement of compliance with the avoidance sequence of the Guidelines is to show whether or not an aquatic resource can be completely avoided. Minimization entails measures to reduce or diminish the impacts to aquatic resources. There are two overarching themes that affect how the mitigation sequencing is conducted. One is that although the burden of proof for satisfying these steps rests with the permit applicant, the USACE must rely upon its own analysis in making a finding of compliance or non-compliance with the Guidelines. The applicant must provide information that is sufficient to determine compliance, so the USACE can make a timely permit decision. In order to determine if project component locations can be shifted to avoid or minimize impacts, a functional or aquatic site assessment is required.				

		Because this proposal would appear to result in the loss of waters of the U.S., including wetlands, future documentation should include a mitigation section that contains a discussion describing how impacts to waters of the U.S. are to be avoided and minimized. This information must be specific to the proposed work and sufficient for the Corps' Guidelines analysis. Public Interest Review: The decision whether to issue a permit will be based on an evaluation of the probable impacts, including cumulative impacts, of the proposed activity and its intended use on the public interest (33 CFR 320.4). To the extent appropriate , the public interest review would include consideration of policies as described in 33 CFR 320.4(b) through (r), which include conservation, economics, aesthetics, general environmental concerns, wetlands, historic properties, fish and wildlife values, flood hazards, floodplain value, land use, navigation, shoreline erosion and accretion, recreation, water supply and conservation, water quality, energy needs, safety, food and fiber production, mineral needs, consideration of property ownership, needs and welfare of the people. Evaluation of the probable impact that the proposed activity may have on the public interest requires a careful weighing of all the factors that are relevant to the project. The benefits that reasonably may be expected to accrue from the proposal must be balanced against its reasonably foreseeable detriments. The decision whether to authorize a proposal, and if so, the conditions under which it will be allowed to occur, are therefore determined by the outcome				

		of this general balancing process of these factors. The USACE appreciates the opportunity to comment. Please contact Randal Vigil via email at Randal.P.Vigil@usace.army.mil, by mail at the address above, or by phone at (907) 201-5022, if you have questions. Sincerely, Randal P. Vigil Project Manager Regulatory Division				

2/3/2023	Krista Garrett she/her/hers Conservation Director Southeast Alaska Land Trust	Hello PEL Study Team and Technical Advisory Committee, Please find attached the Southeast Alaska Land Trust's comments regarding the PEL Study's preliminary alternatives. Thank you, -- Krista Garrett See letter dated 2/3/2023	Good afternoon Krista, Thank you for the additional comments. Morgan McCammon	2/3/2023	M. McCammon	Advisory Committee Comment - Meeting 2
2/3/2023	Jesse Lindgren ADF&G Habitat Biologist	Hi Everyone, ADF&G biologists have reviewed the preliminary alternatives and screening for the Juneau Douglas second crossing PEL study and I have attached our comments. Please reach out if you have any questions. Thank you for the opportunity to comment, Jesse Lindgren ADF&G Habitat Biologist See letter dated 2/3/2023	These are the combined ADF&G comments. Nina Keller	2/3/2023	N. Keller	Advisory Committee Comment - Meeting 2

2/5/2023	Jack Dodson	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. Here are the reasons why: — This project is uniquely susceptible to fatally flawed alternatives because of the tremendous wildlife, habitat, ecosystem services, recreational, and viewshed values of Taashuyee, the Mendenhall Wetlands. Again, alternatives which cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL process or in an Environmental Impact Statement. (Watch: The history of the refuge.) — The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the Salmon Creek, Mendenhall River, and Fish Creek estuaries. —There is not a demographic demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This places a particularly high burden of proof for a need for this project and is critical in weighing the relative importance of alternatives that cross the Mendenhall Wetlands. This project will likely increase community sprawl and create a services cost burden for all community members. — Alternatives that reduce the short-duration	Good morning Mr. Dodson, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/6/2023	M. McCammon	

		traffic pressure on the existing Douglas Bridge and intersections should be evaluated, including non-crossing opportunities such as improved public transportation and area-wide housing density improvements. — The expenditure of large amounts of federal tax dollars in a community that is not growing for a project which would expand the community footprint is, at best, questionable. Gunalchéesh/thank you,				

2/7/2023	Megan G. Hillgartner Southeast Regional Manager Alaska Department of Natural Resources Division of Mining, Land and Water	DNR's comment (please let me know if you have any questions): Thank you for the opportunity to comment on the Department of Transportation and Public Facilities (DOTPF)/City and Borough of Juneau (CBJ) Juneau-Douglas North Crossing Planning and Environmental Linkages (PEL) Study. The PEL study area encompasses lands managed by the Alaska Department of Natural Resources (DNR), Division of Mining, Land and Water (DMLW), including tide and submerged lands underlying Gastineau Channel and Fritz Cove and land within the Mendenhall Wetlands State Game Refuge (MWSGR). Per AS 16.20.034 and the 1993 Juneau State Land Plan, DNR maintains management authority of the surface and subsurface estate within the MWSGR and is directed to ensure that actions taken within the refuge are in conformity with the 1990 Alaska Department of Fish and Game (ADFG) MWSGR Management Plan. As required by AS 16.20.034, the ADFG MWSGR Management Plan contains provisions by which CBJ may acquire land from DNR for the purpose of establishing public transportation corridors[1]. At this time, DNR does not have any comment regarding the PEL Study alternatives, screening process, or alternatives criteria. DNR notes that any disposal of resources on state land within the MWSGR or within DMLW-managed tidelands and submerged lands requires authorization from DNR. [1]AS 16.20.034(j): Notwithstanding the provisions of (d) — (i) of this section, if the City and Borough of Juneau demonstrates to the Departments of Natural Resources and Fish and Game, jointly, that	Good morning Megan, Thank you for sharing these comments. Morgan McCammon	2/7/2023	M. McCammon	Advisory Committee Comment - Meeting 2

		there is a superior public need for or use of the land to its use as a state game refuge, after public hearing and a finding by the departments supporting the determination that such a need or use exists or is required, the use shall be permitted. A final administrative order, ruling, or determination by the departments adverse to the petition of the City and Borough of Juneau is subject to judicial review under AS 44.62.560 — 44.62.570. Thank you! Megan G. Hillgartner Southeast Regional Manager Alaska Department of Natural Resources Division of Mining, Land and Water Southeast Regional Land Office

McCammon	Advisory Committee Comment

2/21/2023	Teri Tibbett (BBNA & Douglas Advisory Board)	Hi Morgan…Thanks for the email and information! I also echo the sentiments expressed about the online/Zoom meeting. Is it too late to arrange an in-person meeting, like the one we had at Centennial Hall last summer? While Centennial is under repair, the JACC and Elizabeth Peratrovich Hall are alternatives. The libraries often have large meeting rooms too. St. Ann's Parish Hall is often available and would be large enough for 50-75 people. While it might be cutting it close to plan for an in-person on March 6, I'm imagining many would welcome a postponement to be able to meet in person. Thanks for considering these alternatives. Teri	Good morning Advisory Committee Members, Thank you to those who shared concerns about meeting virtually. 2/21/2023	Thomas C. Williams	Dear US Department of Transportation: I have attached my letter in support of a RAISE grant being approved for the Juneau-Douglas North Crossing. Please contact me with any questions. Thank you for your consideration. Sincerely, Tom Williams February 21, 2023 The Honorable Pete Buttigieg Secretary United States Department of Transportation 1200 New Jersey Avenue, SE Washington, DC 20590 Dear Secretary Buttigieg, I urge you to approve federal discretionary funding under the Rebuilding American Infrastructure with Sustainability and Equity (RAISE) grant program for the JuneauDouglas North Crossing (JDNC) as requested by the City and Borough of Juneau, Alaska (CBJ) and the Alaska Department of Transportation (ADOT). The requested 2023 RAISE award is a critical part of this project, providing funds to support the final design of the project and produce bid ready construction documents. The JDNC will create a second highway connection between Juneau and Douglas Island. Currently there is only a single bridge providing access to Douglas Island. The historical town of Douglas is a very important community within the CBJ. Douglas Island is an area abundant with desirable residential communities and outdoor attractions such as hiking trails and ski areas. However, access to Douglas Island and its many residents is limited with only one highway connection to the mainland. The JDNC will have a much greater positive	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		effective on the short-term and long-term health and quality of life for Juneau and Douglas residents than any other currently attainable development project. In addition to many other benefits, the JDNC will: 1. ensure adequate emergency services, such as fire, police and medical services, remain available to Douglas residents in the event the existing bridge is closed; 2. relieve the significant congestion associated with the existing bridge; 3. allow ADOT to close the existing bridge for significant repairs and maintenance without impeding the flow of traffic between Juneau and Douglas; 4. increase housing development opportunities on Douglas Island; 5. increase recreational opportunities on Douglas Island; 6. increase employment opportunities throughout the CBJ; 7. improve tourism opportunities; 8. improve the CBJ's ability to attract new businesses and US government agencies to the Borough; and 9. potentially relieve traffic congestion in downtown Juneau. Please help ensure the CBJ's economic future, stability, and sustainability by approving the requested RAISE grant for the Juneau-Douglas North Crossing. Thank you very much.				

2/21/2023	Thomas C. Williams	The Honorable Pete Buttigeg Secretary United States Department of Transportation 1200 New Jersey Anenue, SE Washington, DC 20590 Dear Secretary Buttigeg, I urge you to approve federal discretionary funding under the Rebuilding American Infrastructure with Sustainability and Equity (RAISE) grant program for the Juneau Douglas North Crossing (JDNC) as requested by the City and Borough of Juneau, Alaska (CBJ) and the Alaska Department of Transportation (ADOT). The requested 2023 RAISE award is a critical part of the project, providing funds to support the final design of the project and produce bid ready construction documents. 2/24/2023	Bruce Baker	ATTENTION: Members of the CBJ Assembly Public Works & Facilities Committee - Attached are my 2-page comments regarding the Juneau North Second Crossing. I will be unable to attend your pulic meeting on this subject because I will be out of state. Thank you for the opportunity to submit the attached written comments in lieu of my testifying in person. /s/ Bruce Baker	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

2/24/2023	Bruce Baker	I oppose the proposal for a “Mendenhall Peninsula” bridge which would cross Fritz Cove, the area which includes the North Douglas boat ramp, the CBJ‘s Fish Creek Natural Area Park, and Bayview Subdivision. ● A “Mendenhall Peninsula” option would be the longest and most expensive second crossing alternative, requiring a very costly bridge across Fritz Cove and an essentially new road down the Mendenhall Peninsula. ● It would result in the longest possible travel distances for medical and other first responders, plus most residents’ travel to work, shopping, and other activities, in the event that the existing Juneau-Douglas bridge becomes even temporarily unusable for any reason. ● It would have a significant adverse impact on Fritz Cove whales, sea lions, seals, Dungeness crab, anadromous fish utilizing the Fish Creek estuary (coho, pink, chum, and hatchery king salmon; cutthroat trout; and Dolly Varden char), and numerous other fish and invertebrate species which make up the food chain. ● On the east side of both Fritz Cove and your identified “Mendenhall Peninsula” crossing corridor is Bayview Subdivision which consists of more than 60 year-round residential homes, the destruction or disruption of which would be an enormous community impact, the economic cost of which would be a huge financial burden for the CBJ, considering the cost of settling numerous likely lawsuits and making very large buyout payments to displaced homeowners. ● Hopes for development of the west side of Douglas Island are wishful thinking because Juneau’s population is not increasing and many government offices have been moving to the Anchorage area. Moreover, no one has come forth	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		with a favorable benefit-cost analysis that takes into account all of the social, economic, and environmental costs of providing highway access directly from the Mendenhall Peninsula across Fritz Cove to North Douglas to facilitate west side development. In Summary: Of all the identified second crossing alternatives, your “Mendenhall Peninsula” option is the most far out, both literally and figuratively. Your time and energy would be better spent selecting a more practical crossing alternative southeast of the Juneau Airport. Sincerely, /s/ Bruce Baker				

2/25/2023	Linda Baker	Hello, One of the main reasons for a 2nd crossing is in case the main bridge is inoperative for a period of time. Many of the people who work in Juneau live in Douglas plus kids who attend high and middle school. It makes no sense to have their alternative access as far away as the Mendenhall Peninsula. A second crossing at Salmon Creek provides a better alternative plus it would cut many miles off the trip to Eaglecrest and North Douglas and would be one of the least damaging to the environment. Sincerely, Linda Baker	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log
2/28/2023	Linda Shaw (she | her) Wildlife Biologist, Alaska Region NOAA Fisheries | U.S. Department of Commerce	Hi Morgan and all, As I will be unable to make the March 6 Technical Advisory Committee meeting, Molly Zaleski will be attending for NMFS Habitat. To help Molly and others prepare, could you share an agenda for the meeting as well as the public comments received by the February 3 deadline? Thank you so much, Linda Linda Shaw	Good afternoon Advisory Committee Members, Please see the attached agenda and Draft Level 1 Screening Memo. We plan to present on the materials in this memo at Monday's meeting. We do not expect that you will have completely read through and digested the content prior to the meeting. We are sharing these materials early so you will have an opportunity to provide input before this memo is finalized. Additionally, we are sending out the comments received during the comment period. We are not soliciting comment on these, rather we are responding to the request for Advisory Committee members to have an opportunity to see them. We look forward to talking with you on Monday. Morgan McCammon	3/3/2023	M. McCammon	Advisory Committee Comment

2/28/2023	Carl J. Uchytil, P.E. Port Director City & Borough of Juneau	1. The Docks & Harbor Board is supportive of the Juneau North Douglas Cross Project as it provides greater public access to Docks & Harbors facilities. The Board is agnostic to a preferred location and defers to the US Coast Guard regarding navigation impedances resulting from a particular bridge design. 2/28/2023	Friends of Fritz Cove	Dear Ms. Koester, CBJ Assembly Members, and CBJ Public Works & Facilities Committee Members: The Friends of Fritz Cove appreciate the opportunity to submit written comments in lieu of testifying in person at the Public Works and & Facilities meeting this Thursday, March 2, as it takes public comment on the Second Crossing. The Friends of Fritz Cove submits our petition with 98 signatures to date as our official position regarding the Second Crossing. We are in opposition to a bridge crossing from the Mendenhall Peninsula to the vicinity of the North Douglas boat launch. Please add this to the public record for the project, and let us know with a reply here that you have received this email. Thank you, Friends of Fritz Cove	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

2/28/2023	Andy Hughes	Evaluate construction of a causeway across the Gastineau Channel Wetlands southeast of the airport runway with a hydraulically operated bridge located at an elevation sufficient to pass most small vessels forecast to be able to navigate the channel over a reasonable period into the future as restricted by hydrostatic rebound. The bridge could be opened by appointment to pass the occasional vessel with clearance requirements exceeding the bridge clearance limits at high tide. Past studies have demonstrated that it is not economically feasible to periodically dredge the channel to maintain a specific depth. As years go by the need to open the bridge should become moot as the land continues to rise. Conduct a survey of the number of small vessels that transit the channel by size, type, and height. My guess is the clearance requirements below the approach to the airport runway is 18 feet below the airport runway approach surface. I do not believe longer runways will be needed as aviation economics will dictate that Alaska air carriers serving Southeast Alaska and Alaska at large will be designed to operate into most of the Nation's runways not just Juneau. Also locate the point where the incoming tides meet from the east and west ends of the channel. Locating the causeway as close to this point as possible would minimize the impact to existing tidal currents. Consider the population centers of Juneau, trip purposes, and length of forecasted trips to identify	Good afternoon Mr. Hughes, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	2/28/2023	M. McCammon	

		crossing locations that provide the greatest economic benefits to the user. Identify the most cost effective alternative over the road crossing service life, all cost consider. Andy Hughes				

3/2/2023	Krista Garrett she/her/hers Conservation Director Southeast Alaska Land Trust	Hello Morgan, Just following up on Linda's email – will you be able to share an agenda for Monday's meeting and copies of the public comments received by the study team? Thank you, Krista -- Krista Garrett she/her/hers Conservation Director Southeast Alaska Land Trust	Good afternoon Advisory Committee Members, Please see the attached agenda and Draft Level 1 Screening Memo. We plan to present on the materials in this memo at Monday's meeting. We do not expect that you will have completely read through and digested the content prior to the meeting. We are sharing these materials early so you will have an opportunity to provide input before this memo is finalized. Additionally, we are sending out the comments received during the comment period. We are not soliciting comment on these, rather we are responding to the request for Advisory Committee members to have an opportunity to see them. We look forward to talking with you on Monday.	3/3/2023	M. McCammon	Advisory Committee Comment
3/2/2023	Dave Hanna	I would like to echo this. We at least need the weekend to digest what's been done so far if we are to do the job expected of us. . If that is not possible I suggest we postpone the meeting.	Good afternoon Advisory Committee Members, Please see the attached agenda and Draft Level 1 Screening Memo. We plan to present on the materials in this memo at Monday's meeting. We do not expect that you will have completely read through and digested the content prior to the meeting. We are sharing these materials early so you will have an opportunity to provide input before this memo is finalized. Additionally, we are sending out the comments received during the comment period. We are not soliciting comment on these, rather we are responding to the request for Advisory Committee members to have an opportunity to see them. We look forward to talking with you on Monday.	3/3/2023	M. McCammon	Advisory Committee Comment

3/2/2023	Carl J. Uchytil, P.E. Port Director City & Borough of Juneau	Dear CBJ Assembly & Dowl Engineering, The attached memo is provided on behalf of the CBJ Docks & Harbors Board of Directors. Sincerely, Carl Carl J. Uchytil, P.E. Port Director City & Borough of Juneau Port of Juneau From: Carl Uchytil, Port Director To: City & Borough of Juneau Assembly Via: Docks & Harbors Board Date: February 28th, 2023 Re: Docks & Harbors Board Comments – Juneau North Douglas Crossing Project 1. The Docks & Harbor Board is supportive of the Juneau North Douglas Cross Project as it provides greater public access to Docks & Harbors facilities. The Board is agnostic to a preferred location and defers to the US Coast Guard regarding navigation impedances resulting from a particular bridge design. #	Good afternoon Mr. Uchytil, Thank you for providing comments on behalf of the CBJ Docks & Harbors Board of Directors. We appreciate the input. Would you like to be included in the study email list to receive updates? Best regards, Morgan McCammon	3/2/2023	M. McCammon	CBJ Assembly PW&FC Work Session

3/2/2023	Amy Rodman	Is there any way these emails could be sent out more than 4 hours in advance of the scheduled event?	Good afternoon Ms. Rodman, Thank you for sharing your concern. The PEL study team was invited to participate in this City and Borough of Juneau (CBJ) Assembly Public Works & Facilities Committee Work Session. Today, we received the information release sharing that this work session would provide an opportunity for public testimony to the CBJ Assemblymembers present. We wanted to share this information with community members who expressed interest in the PEL study. For those unable to attend this work session, the CBJ Assembly is offering to accept written comments through their website: https://boroughassembly@juneau.gov. The PEL study team would appreciate receiving a copy of those comments at jdnorthcrossing@dowl.com. Best regards, Morgan McCammon	3/2/2023	M. McCammon	CBJ Assembly PW&FC Work Session
3/2/2023	Greg Capito	Quit chasing federal dollars and put a stop to this nonsense. Juneau's population has been in steady decline and a second crossing is not needed. Focus resources instead on maintaining our existing highway system.	Good morning Mr. Capito, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	3/3/2023	M. McCammon	CBJ Assembly PW&FC Work Session

3/2/2023	Garrett Paul	I didn't receive this notice until 1:20 PM on the day of the work session. Please provide more heads up than 3.5 hours so citizens can properly plan to attend. This short notice doesn't look good on public outreach efforts. Thanks,	Good morning Mr. Paul, Thank you for sharing your concern. The PEL study team was invited to participate in this City and Borough of Juneau (CBJ) Assembly Public Works & Facilities Committee Work Session. Today, we received the information release sharing that this work session would provide an opportunity for public testimony to the CBJ Assemblymembers present. We wanted to share this information with community members who expressed interest in the PEL study. For those unable to attend this work session, the CBJ Assembly is offering to accept written comments through their website: https://boroughassembly@juneau.gov. The PEL study team would appreciate receiving a copy of those comments at jdnorthcrossing@dowl.com. Best regards, Morgan McCammon	3/3/2023	M. McCammon	CBJ Assembly PW&FC Work Session

3/2/2023	Rick Currier	I appreciate being in the loop, but sending this out less than four hours prior to the meeting is not really beneficial. I didn't check email until after the meeting was over. Please give at least two days advance notice. Regards,	Good morning Mr. Currier, Thank you for sharing your concern. The PEL study team was invited to participate in this City and Borough of Juneau (CBJ) Assembly Public Works & Facilities Committee Work Session. Today, we received the information release sharing that this work session would provide an opportunity for public testimony to the CBJ Assemblymembers present. We wanted to share this information with community members who expressed interest in the PEL study. For those unable to attend this work session, the CBJ Assembly is offering to accept written comments through their website: https://boroughassembly@juneau.gov. 3/2/2023	Allen Shattuck	I strongly support the second North Douglas Crossing and urge the Assembly to proceed with the project as rapidly as possible. The main reason I support it is for public safety. If the current bridge was unavailable for any reason, public safety would be severely hampered and could be life threatening. My second reason for supporting it is the improved access between North Douglas and the Lemon Creek/Mendenhall Valley areas. The improved access would in turn also result in shorter drive times and therefore reduce CBJ impact on climate change and result in saving s for local residents. Finally, it appears that the most beneficial crossing point would be the Sunny Point option. Thanks in advance for considering my comments. Allen Shattuck	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log
3/2/2023	Matt Robus	Good afternoon, I am aware of this afternoon's meeting of the CBJ Assembly Public Works and Facilities Committee regarding the "second crossing" but am currently traveling out-of-state and cannot attend in person. My understanding is that although only in-person testimony will be heard, it is acceptable to submit written comments to the committee. I have been participating in the North Crossing PEL Study since it's inception and I feel it important to express my opinions on this subject, since CBJ will be an important partner if the second crossing project goes forward. I have attached my comments to this email. Thank you. Best, Matt Robus	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

3/2/2023	Laird Jones	I cannot make the meeting tonight so here is my comment. There needs to be a second crossing which I fully support. I agree with the safety and ease of access and having an alternative route available to Douglas. The only request is to keep the airport access trail accessible for public walking. Laird A. Jones, Juneau resident	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

3/2/2023	Tomas Boutin Juneau, AK	Good afternoon, I do not oppose construction of a so-called 2nd crossing to Douglas Island so long as CBJ taxpayers are not asked for funding and so long as the Mendenhall Refuge is not bisected by the construction. The last time voters were asked about the crossing it was rejected by about a 2:1 margin. I was a member of a group that opposed the measure at that time, a group of about 200 people. The group had foresters, the spouse of a sitting legislator, a CBJ Assembly member, many ADF&G employees and retired ADF&G employees, environmentalists and fiscal conservatives. I had never been a member of such a group, and the political diversity within that group was at least a little remarkable. Avoiding Refuge bisection seems to mean that the crossing must be either near the hospital or it must come off the Mendenhall Peninsula. I suppose that a tunnel would also meet that criterion but I cannot imagine that a tunnel would be feasible. Crossing by the hospital seems to be the least expensive of the three choices. I know that state economists project a continued and significant population decline for Juneau. I hope that CBJ Assembly priorities are selected with that in mind unless CBJ government has information that successfully defeats state population projections. Thank you for your time. Thank you for your hard work for Juneau! Tomas Boutin	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

3/2/2023	Alisha Falberg	Dear Assembly, I am a Douglas resident and oppose the Juneau Douglas North Crossing. I cannot make the Assembly Public Work Session on Juneau Douglas North Crossing PEL Study this evening, March 2, 2023, but have attached comments on my views herein. These comments were also sent to the DOWL engineering group. Thank you, Alisha Falberg	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log
3/2/2023	Carole Bookless	I hope the announcement below is not indicative of how this study attempts to get public input. I opened this email at 6:30 pm on March 2. It was sent at 1:20 pm on March 2. Only inperson comments will be accepted at the meeting. I don't believe that a notification sent out the afternoon of the meeting is adequate. The notice doesn't even really say what the focus of the meeting is. How can anyone give meaningful input? An additional crossing is needed to benefit both Douglas Island and Mainland Juneau. Any crossing must minimize the impacts to the Mendenhall Wetlands and neighboring private property owners. The main importance of the crossing is for safety although there would be other benefits. there will be negative impacts as well, but they must be minimized and mitigated as much as possible. I assume that is the point of the study, to identify the plusses and minuses of each possible crossing. My choice is to put the crossing as close to already inducrialized areas and away from undisturbed parts of the Mendenhall Wetlands. Please do a better job of announcing the "public" work session. I put public in quotes because if the public is not aware of the work session, it is not public. Carole Bookless Douglas, AK	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

3/2/2023	Jim Dorn	Madam Mayor and Assembly Members: I have been following this study since the beginning and it appears that all initial alternatives are still under consideration. I assume that at some point a preliminary screening of alternatives will take place to eliminate alternatives that are not feasible based on design issues, estimated cost, professional judgement, environmental concerns and available site data. Until the preliminary screening of alternatives is ready for public comment, it appears there is nothing new from the previous public meetings held by ADPTPF and DOWL to comment on. My previous comments are part of the public record and are being considered by the PEL project team. Regardless, here is a summary of a few important issues from those comments to be included in CBJ's public meeting record: 1) Alternatives in the area from the eastern end of the runway to and including Fritz Cove should be eliminated from further consideration for the following reasons: a) Juvenile king crab are frequently caught in pots between Fish Creek and the North Douglas boat ramp, particularly during late spring. This area is an important rearing area for king crab and important for recovery of the king crab personal use harvest in the Juneau area. b) Several hundred personal use dungeness crab	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		pots are set each summer between Fish Creek and the North Douglas Boat ramp. This area is an important rearing and personal use harvest area for dungeness crab. Personal use crab fishing is an important part of the Juneau economy. c) During the peak of the coho and king salmon season there are regularly 50 to 100 boats in Fritz Cove targeting returning salmon between Fish Creek and the North Douglas boat ramp. This fishery in important to Juneau sport fishers and charter operators. Sport fishing in Juneau is an important part of the local economy. d) During coho and king salmon season over 60 people are regularly observed between Fish Creek and the eastern edge of the airport runway targeting fish returning to DIPAC. This area is important to Juneau sport fishers and provides one of the best shore based fisheries in Alaska. Sport fishing in Juneau is an important part of the local economy. e) Each summer kayak tours leave the North Douglas boat ramp and paddle to Fish Creek. Over the course of the summer there are literally several thousand tourists that take this tour. The Fritz Cove area is important to Juneau's tourism industry. With regards to crossing alternatives between the				

		eastern end of the runway and Salmon Creek, consideration should be give to an elevated crossing on concrete pilings to allow unrestricted sediment movement resulting in minimum impact to the Mendenhall Wetlands Wildlife area and to fish passage. Thank you for the opportunity to comment. Jim Dorn				

3/3/2023	Patty Wahto Airport Manager Juneau International Airport	Hi Morgan. I submitted comments early on when the comment period opened through the online portal. Was that kept with the TAC comments or public comments? It would have been from me on behalf of the Juneau Airport. Thanks much. Patty Patty Wahto Airport Manager Juneau International Airport	Good afternoon Patty, We keep all comments together. The comments your sent early on are included in the PEL Study comment log. We shared the comments within the latest comment period at this point with the Advisory Committees as they are the most relevant at this point in the study. All comments will be shared at the conclusion of the PEL Study. Let me know if you have any other questions or concerns. Best regards, Morgan McCammon	3/3/2023	M. McCammon	Advisory Committee Comment

3/3/2023	Barb Mecum Friends of Fritz Cove	Good Morning, Yesterday evening, Thursday, March 2, the CBJ Public Works Committee held a meeting to take public comments regarding the Second Crossing. Steve Noble presented an update on the status of the PEL Study which was very helpful. Prior to the meeting, the Friends of Fritz Cove sent the above email update for the record since the CBJ indicated it would take comments in lieu of in-person comments, but when I inquired of Ms. Koester and Mr. Bryson how and whether our emailed comments would be read into the record that evening I was told no, they would not be. Many of us were able to be on Zoom for the meeting, but were unable to attend in person. So I am sending this along to you as an update to the record. We continue to grow in numbers and are now up to 98 signers on the electronic petition, and another 6 on a paper petition for folks who preferred that method, so a total of 104 friends and neighbors who are in opposition to a second crossing at the Mendenhall Peninsula to the vicinity of the North Douglas Boat Launch. Please let me know you have received this email, and that ii has been added to the record. Also, I am wondering if this email/petition will be shared with the members of the Stakeholder and Technical Committees meeting this Monday, March 6? Thank you, Barb Mecum Friends of Fritz Cove ---------- Forwarded message --------- From: Friends of Fritz Cove Date: Tue, Feb 28, 2023 at 1:46 PM	Good morning Barb and the Friends of Fritz Cove, Thank you for sharing these comments and an update on the petition with the study team. We will include them in our comment records. Best regards, Morgan McCammon	3/3/2023	M. McCammon	CBJ Assembly PW&FC Work Session

		Subject: ATTENTION: Ms. Koester, Members of the CBJ Assembly Public Works & Facilities Committee - To: Katie Koester, BoroughAssembly@juneau.org Cc: Friends of Fritz Cove, Barb Mecum Dear Ms. Koester, CBJ Assembly Members, and CBJ Public Works & Facilities Committee Members: The Friends of Fritz Cove appreciate the opportunity to submit written comments in lieu of testifying in person at the Public Works and & Facilities meeting this Thursday, March 2, as it takes public comment on the Second Crossing. The Friends of Fritz Cove submits our petition with 98 signatures to date as our official position regarding the Second Crossing. We are in opposition to a bridge crossing from the Mendenhall Peninsula to the vicinity of the North Douglas boat launch. Please add this to the public record for the project, and let us know with a reply here that you have received this email. Thank you, Friends of Fritz Cove See email dated 3/3/2023				

3/3/2023	Dee Lee	It would be appreciated if these notices could go out sooner than the day of the event. 1:20 pm send for a 5:00 pm meeting is not acceptable time frame for notification. Thank you for considering more appropriate communication.	Good morning, Thank you for sharing your concern. The PEL study team was invited to participate in this City and Borough of Juneau (CBJ) Assembly Public Works & Facilities Committee Work Session. Yesterday, we received the information release sharing that this work session would provide an opportunity for public testimony to the CBJ Assemblymembers present. We wanted to share this information with community members who expressed interest in the PEL study. For those unable to attend this work session, the CBJ Assembly is offering to accept written comments through their website: https://boroughassembly@juneau.gov. The PEL study team would appreciate receiving a copy of those comments at jdnorthcrossing@dowl.com. Best regards, Morgan McCammon	3/3/2023	M. McCammon	CBJ Assembly PW&FC Work Session

3/3/2023	Ron Somerville, MWSG	Morgan, the presentation last night at the CBJ meeting included an analysis of the crossing survey was presented with bars showing preferences by crossing location. I was unable to get a copy of that chart. Could you e-mail that to me please? Thanks Ron	Good afternoon Ron, This survey analysis will be covered in more detail at Monday's Advisory Committee meeting. I am getting ready to send out an email to the group that will include the Level 1 Screening Memo. We will share the presentation following the meeting so you will have all the charts. Please note that we don't expect everyone to have completely reviewed these materials prior to the meeting. Additionally, we are sending out the comments received during the comment period. We are not soliciting comment on these, rather we are responding to the request for Advisory Committee members to have an opportunity to see them. We look forward to talking with you on Monday. Morgan McCammon	3/3/2023	M. McCammon	CBJ Assembly PW&FC Work Session

3/3/2023	Mary Ann Dierckman	Please send notice of future meetings two days in advance. I received this email on the day of the meeting. I did sign up for future notices. Additional comment Morgan,thanks this was very helpful information.	Good morning Ms. Dierckman, Thank you for sharing your concern. The PEL study team was invited to participate in this City and Borough of Juneau (CBJ) Assembly Public Works & Facilities Committee Work Session. The day of, we received the information release sharing that this work session would provide an opportunity for public testimony to the CBJ Assemblymembers present. We wanted to share this information with community members who expressed interest in the PEL study. For those unable to attend this work session, the CBJ Assembly is offering to accept written comments through their website: https://boroughassembly@juneau.gov. The PEL study team would appreciate receiving a copy of those comments at jdnorthcrossing@dowl.com. Best regards, Morgan McCammon	3/6/2023	M. McCammon	CBJ Assembly PW&FC Work Session

3/3/2023	Carl Broderse n	Dear Assembly Members, Thanks for all your hard work! Opinion: I strongly prefer the Vanderbilt crossing option. -Is a good balance between preserving precious wetlands and still providing travel time benefits. -It could probably be built without eminent domain. -Connects well with existing road infrastructure. -Should reduce traffic on Douglas Highway by making Egan the best option for half of every trip. -Doesn't destroy areas around mouth of the Mendenhall, some of the coolest parts of town. Second choice: Twin Lakes (assuming Dougas lots can be purchased from Northstar Trekking). The Douglas bench road is a cool concept, but it would cross a thousand creeks and open the City to endless lawsuits when concentrating that water through culverts inevitably floods homes. Analysis: Using google Earth, I measured the travel distances from centers of population (Out the Road, Valley, and Lemon Creek) to the start of the Eagle Crest Road and the Douglas Roundabout. I noted which drives are improved or worsened by more than a mile (a margin of error), or were not impacted (new distances are within a mile of the current distance). All drives to the Douglas Roundabout (DR) were the same length under all options except the Mendenhall Peninsula Option, where they are substantially worse. All drives to the base of Eagle Crest's Fish Creek Road (ECR) were improved, except for again the Mendenhall	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		Peninsula option, where they were the same. The North Airport and East Sunny Point options have essentially the same benefit in distance reduction (~26.5 miles total improvement across all six driving distances for each of the options). Vanderbilt comes in just under 24 miles improvement and Twin Lakes at 20 miles. The areas through which the Mendenhall Peninsula and North Airport options would cut are some of the most beautiful and precious in the City. These options should be abandoned for that reason alone, but also because their improvements in driving distance are inadequate or replicated by other routes. E. Sunny Point should be abandoned because it would cut through a great deal of wetlands and is so close to better options; and let's be honest, Sunny Point can afford to tie it up in litigation for years. That leaves Vanderbilt and Twin Lakes! They'd benefit driving times equally for all main northern population centers, and reduce Eaglecrest traffic on Douglas even from downtown. And when West Douglas is built, it will help get that traffic off half of Douglas Highway, and reduce travel times the most evenly. Thank you. -Carl Brodersen				

3/3/2023	Jim Dorn	Hi There, Are the Advisory Committee Meetings open to the public and if so how do I find out where and when they are being held? Thanks,	Good morning Mr. Dorn, The Advisory Committee meetings are not open to the public. The Committee members include representatives from a wide variety of organizations: government and regulatory agencies, local government, tribal government and organizations, community groups, environmental organizations, recreation groups, business organizations, and neighborhood associations. We will be emailing another update newsletter this spring and will host a public open house this summer. The study team welcomes concerns, questions, and comments from everyone throughout the process. Please visit the website at www.jdnorthcrossing.com for the latest information. Kind regards, Jovie Garcia	3/10/2023	J. Garcia	

3/5/2023	Glenn Saviers	Good morning, Will you be having another session with public testimony, since the notice went out only a few hours before the scheduled session? I'm sure lots of people did not see it in time. Thanks, Glenn	Good morning Mr. Saviers, Thank you for sharing your concern. The PEL study team was invited to participate in this City and Borough of Juneau (CBJ) Assembly Public Works & Facilities Committee Work Session. The day of, we received the information release sharing that this work session would provide an opportunity for public testimony to the CBJ Assemblymembers present. We wanted to share this information with community members who expressed interest in the PEL study. For those unable to attend this work session, the CBJ Assembly is offering to accept written comments through their website: https://boroughassembly@juneau.gov. The PEL study team would appreciate receiving a copy of those comments at jdnorthcrossing@dowl.com. Best regards, Morgan McCammon Additional response Good Morning, I am sorry you were not able to attend the worksession; I want to assure you this will not be the last time an Assembly committee takes public testimony on the project. As the project progresses, CBJ Assembly will create venues for the public to communicate directly with their elected officials. At any time, please feel free to submit your comments electronically to Borough Assembly <BoroughAssembly@juneau.gov> CBJ issued a press release February 24th. We also	3/6/2023	M. McCammon	CBJ Assembly PW&FC Work Session

			forward it to members of the advisory committees, since CBJ is a member of both. Public Worksession on Juneau North Douglas Crossing Project Scheduled for March 2 – City and Borough of Juneau We sent a reminder press release (and facebook post) out on the day of, which is what DOWL picked up and forwarded to their list. Better coordination next time is a must! You can sign up for CBJ press releases by emailing the Clerks: Clerks Office Clerks.Office@juneau.gov. I will add your email to the list CBJ keeps for this project. If you are interested, the Zoom meeting recording is available on CBJ's YouTube page. Relevant links are included below. Best, Katie Koester CBJ EPW Dir. SOA DOT&PF Presentation - 3/02 PWFC Worksession Packet https://mccmeetings.blob.core.usgovcloudapi.net/juneauak-pubu/MEET-Packet-697bc2c08af94ab084b4caa3522f6a48.pdf YouTube Zoom Meeting Recording – 3/02 PWFC Worksession https://www.youtube.com/watch?v=BgTAONJ7qFs Project Website https://jdnorthcrossing.com/ Municode – All CBJ Agendas & Packet Materials https://juneau-ak.municodemeetings.com/			

3/6/2023	Ron Somerville	Morgan, I cannot find the graph presented at the CBJ meeting showing the support for the various crossing alternatives. Could you please send that graph to everyone. Thanks Ron Somerville	Good afternoon Ron, We will share the advisory committee presentation following our meeting this afternoon. The CBJ shared the presentation from the March 2, 2023, Assembly Work Session in the packet available on the CBJ website: SOA DOT&PF Presentation - 3/02 PWFC Worksession Packet https://mccmeetings.blob.core.usgovcloudapi.net/juneauak-pubu/MEET-Packet-697bc2c08af94ab084b4caa3522f6a48.pdf Best regards, Morgan McCammon	3/6/2023	M. McCammon	Advisory Committee Comment
3/6/2023	Hunter Mecum	Ms. Mecum called to ask who the advisory committee members were and how they were appointed. I shared that the advisory committees were made up of representatives of regulatory agencies, local government, tribal organizations, community groups, business interests, enviromental groups, and neighborhood associations. She asked if someone was representing North Douglas. I shared that NDNA and BBNA were both members. She said she had never heard that neighborhood associations existed and she lived on North Douglas for 28 years. I let her know that neighborhood association contact information could be found online and asked if she would like a contact. She said she would look it up.	Phone conversation	3/6/2023	M. McCammon	

3/7/2023	Glenn Saviers	Hi Morgan, Thank you for this. However, I want to clarify, will there be more opportunities for verbal testimony in front of the assembly or whichever committee is going to have deciding power on this matter? This is a huge deal for our city and for many people who live here, so I want to make sure we'll all get adequate notice of verbal testimony opportunities in the future. Thanks, Glenn	Good morning Mr. Saviers, We wanted to make sure you had seen the email sent on March 6, 2023, from Katie Koester, Director of CBJ's Engineering and Public Works Department. She notes that the Assembly will be offering additional opportunities for public testimony. The Alaska Department of Transportation and Public Facilities (DOT&PF) is the decision maker regarding which alternatives are recommended to move from this PEL Study into a potential future project that would include public involvement opportunities. One purpose of a PEL Study is to engage the public and agencies early in the planning process. This process evaluates alternatives qualitatively and quantifies potential impacts, positive and negative, based on objective criteria and professional judgement, to provide recommended alternatives that will be looked at more closely as part of a future project including preliminary engineering and environmental impact analysis. Please let us know if you have any further questions or comments you would like to share. Kind regards, Jovie Garcia	3/10/2023	J. Garcia	

3/13/2023	Angie Lunda	Thank you for the opportunity to comment on the proposed crossing to Douglas Island. As an enrolled member of a federally recognized tribe whose homelands include the area impacted by the proposed crossings, my first option is the NO BUILD option. We have been stewards of Tlingit Aani since time immemorial and that is how I approach this proposed crossing. Zero environmental impact is the best option and that is only possible with the NO BUILD option. However, it seems that the powers-that-be have already decided to build a crossing. IF that is the case, then the only conceivable alternative is the Vanderbilt option which would have the least impact on the wetlands. Any option north of Vanderbilt must be rejected in order to protect the delicate and productive wetlands at all costs. The Salmon Creek option may be considered as it, too, would have less impact on wetlands, however, the impact on the hatchery and shipping - uses currently in place at this site, must also be considered. #1 - NO BUILD #2 - Vanderbilt #3 - Salmon Creek No other viable options Sincerely, Angela Lunda	Good afternoon Ms. Lunda, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Talli Vittetoe	3/15/2023	T. Vittetoe	

3/15/2023	Catherine Pohl	Dear PEL Team leadership, I have attached a letter with reference links to help you patch up deficiencies in the wildlife and habitat information you have presented in your Wildlife Technical Memo and Settings documents. It is my view, as a wildlife/habitat biologist with regulatory experience, that you have not presented enough information to credibly address in even the most approximate way the magnitude of the resource or the relative effects of crossing alternatives. Catherine Pohl See Attached document dated 3/15/2023	Good afternoon Ms. Pohl, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Talli Vittetoe	3/16/2023	T. Vittetoe	
3/15/2023	Betsy W. McCracken EPA Biologist	Hello Morgan, I would like to request additional time for agency comment submittal. I have been out of state for the past month tending to my Mom's failing health. I would appreciate an additional minimum 7 days (until at least March 27th.) for my agency to draft and provide comment on the PEL study and alternatives for the JD Highway. Is it possible to receive the requested extension on the comment deadline? Thank you, Betsy Betsy W. McCracken Hi Jovie and Talli, Please see my email below requesting a comment deadline extension.	Ms. McCracken, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your request with the project team and will have an answer for you by the end of day tomorrow, after the team reviews the schedule. Kind regards, Talli Vittetoe Additional response Ms. McCracken, Thank you for your patience while the project team reviewed schedule deadlines. We are able to give you a one-week extension to provide comments on the screening and alternative recommendations, and appreciate your willingness to provide feedback. Kind regards, Talli Vittetoe	3/16/2023	T. Vittetoe	Advisory Committee Comment

		Thank you, Betsy				

3/15/2023	Betsy W. McCracken	Hi Jovie and Talli, Please see my email below requesting a comment deadline extension. Thank you, Betsy Hello Morgan, I would like to request additional time for agency comment submittal. I have been out of state for the past month tending to my Mom's failing health. I would appreciate an additional minimum 7 days (until at least March 27th.) for my agency to draft and provide comment on the PEL study and alternatives for the JD Highway. Is it possible to receive the requested extension on the comment deadline? Thank you, Betsy	Ms. McCracken, Thank you for your patience while the project team reviewed schedule deadlines. Kind regards, Talli Vittetoe	3/17/2023	T. Vittetoe	Advisory Committee Comment
3/16/2023	Catherine Pohl	Hi Christy, Thanks for the conversation today. I guess I should say that I am a former ADF&G Habitat Biologist with experience reviewing this sort of the project. I also have worked for a few decades (yikes!) in bird population monitoring and research. So I like to see the best information brought to bear on decisions, and I find it frustrating when hard-earned data is not used. Here is the annotated reference list. The letter to Kristen is below. I'll take a look at the data tables for Hotspots and see what I can pin down about them. Richard is	Hi Catherine, Thank you for sending the annotated reference list and for sharing this information! Would you be available to meet next week to go over the list with our Project Team? They are not all located in Juneau so it would be scheduled with either Teams or Zoom. Please let me know. Thanks again, Christy Gentemann	3/17/2023	C. Gentemann	

		working on a few other projects but should be available to answer questions about it as they come up-- a nice thing about both of us having home offices. If it turns out a bigger chunk of work on that is involved to make sense of the old data tables, I may need to work with the other project partners and would check in with you and Kristen before proceeding.				
3/17/2023	Matt Robus	Good afternoon, Morgan, Please find attached the comments of the Mendenhall Wetlands Study Group on the draft Level 1 screening document for the proposed North Crossing. Ron Somerville, your main MWSG contact, is having email difficulties and asked me to forward these comments to the PEL group. Thanks for considering our input. Mendenhall Wetlands Study Group See letter dated March 17, 2023	Good morning Matt, Thank you for sharing these comments, we appreciate the input. Additional response in Level 1 Screening	3/20/2023	M. McCammon	Advisory Committee Comment - Meeting 3

3/17/2023	Krista Garrett	Hello PEL Study Team and Advisory Committees, Please find attached the Southeast Alaska Land Trust's comments regarding the Level 1 Screening Results Technical Memorandum. Thank you. See SEALT Comments on Level 1 Screening Results	Good morning Krista, Thank you for providing these comments. We appreciate your input. Additional response in Level 1 Screening	3/20/2023	M. McCammon	Advisory Committee Comment - Meeting 3
3/17/2023	Winston P. Smith, Ph.D.	Ms. Whitesell: Please find attached a letter detailing comments from the Juneau Audubon Society regarding recent decisions and new information by DOWL related to the PEL study. Please feel free to contact me with any questions about the comments or the letter. See comment letter dated 20 March 2023	Good morning Winston, Thank you for sharing your comments with Renee. She has shared them with the team, and we appreciate your input. Additional response in Level 1 Screening	3/20/2023	M. McCammon	Advisory Committee Comment - Meeting 3

3/17/2023	Catherine Pohl	Dear Ms. Hansen, I hope you don't mind that I am contacting you directly. I am a semi-retired habitat and wildlife biologist, formerly of ADF&G Habitat Division. I read your Technical Memo on wildlife for the Juneau North Crossing PEL study yesterday and put together the attached letter listing existing wildlife/habitat references in response. I sent it to the PEL team but also wanted to discuss it with you. The key items are the "Hotspots" report summarizing bird observation on the refuge and the SEALtrust 2004 refuge habitat mapping report. These should be the starting points for anyone interested in birds and habitat on the refuge and would help to fill the serious gaps in your wildlife/habitat information. I also wanted you to know that GIS data is available for these. You could ask SEALTrust about the vegetation map and potential for updating it. Data tables and their related survey point shapefiles for the Hotspots survey are also available, at least in theory. Richard Carstensen, one of the authors, is currently the steward of these. I will be looking to have them archived with USFWS if they don't have them already, and with ADF&G. That may involve putting together some metadata and working with Richard to reconstruct or describe some of the summary queries. The points are available now. The Hotspot data set is complex, including a full year of structured surveys done at the time, additional site surveys at that time, summaries of the previous refuge bird survey (1986), and compilation of an enormous set of birder field notes, 80% of which were from leading Juneau birder Paul Suchanek.	Sent to K. Hansen. Additional response in Level 1 Screening			

		EBird could be a source for more current information and I see that you have queried it, although I suspect that more would be available there. I would like to ask how your selected the points presented in the Tech Memo. Species numbers are one aspect, but species groups, key species and numbers by species and group are particularly of interest on a wildlife refuge. For all of this data, it is important to understand the strengths and weaknesses of it. Ebird data is focused on trails and the most popular roadside access points. The survey data was also limited to some degree by access, so much of it focuses on the edges of the refuge where access is available. Best,				

3/19/2023	Dave Hanna	Greetings, Below are my comments on the ranking of the alternatives and the process used: To begin with, I feel one of the most important parts of the process has a serious flaw and this is the projected traffic study. To only consider current traffic needs and patterns for a project that is meant to allow growth for the community is unacceptable. The North and West side of Douglas Island are the logical candidates for residential, commercial, and industrial expansion. Indeed the fact that all of Juneaus' freight and most of its fuel has to be trucked through an avalanche zone and a landslide zone through the heart of town on its busiest street gives many of us pause and is a strong incentive for moving these facilities to West Douglas. With this in mind, it is premature to remove both the north of the airport alternatives. The actual ratings of the alternatives reveal some additional shortcomings. I will address some of these in order. The Salmon Creek alternative does mention that there are concerns with right of way acquisitions. It could go on to explain that this area is currently the only alternative location to bring large freight barges into and handle the freight loads. Two of the major freight distributors are located here which is also concerning. Disrupting this could have serious consequences. The Vanderbilt location would have a direct impact on the following streams; West Creek, East Creek, Switzer Creek, Lemon Creek, and Vanderbilt Creek. It would also require substantial fills in the intertidal areas.	Good morning Dave, Thank you for sharing your comments, we appreciate your input. Additional response in Level 1 Screening	3/20/2023	M. McCammon	Advisory Committee Comment - Meeting 3

		In contrast, The Sunny Point location is strategically located at the existing interchange needing little fill in the wetlands and would not impact any of the above mentioned streams. Three of these streams are already listed as impaired waterbodies. On the Douglas Island side, the city already owns enough property that no residences need be impacted. They also own property directly across the Douglas Highway which would allow access to a future bench road. The north side of the airport scored low for some puzzling reasons. A low scoring for proximity to commercial districts flies in the face of reason. Any realtor will tell you that proximity to a major thoroughfare raises the value of the property. It does not diminish it. This alternative would actually open up more industrial zoned property. Future development on West Douglas will demand quick access to the Mendenhall Valley population center. Furthermore, it is debatable as to the need for a tunnel in this location. The Mendenhall Peninsula route is another that would be ideal once North and West Douglas are developed. The pitfalls are stated that it would divide neighborhoods, be too close to residential areas and necessitate a 140' tall bridge due to the grade change. The fact is the central route would appear to avoid all existing residential as it opened up additional CBJ land for much needed housing. A perusal of google earth shows that there is adequate space to maintain a desired 6% grade down to a 40' elevation. This is a dramatic difference. In addition, I feel that the fact that this option would likely have the least impact on the Mendenhall Refuge needs more recognition.				

		For these and other reasons I request that the ranking be re-visited. In addition, I feel that none of the alternatives can be seriously considered until the issue of not considering future development is cured.				

3/20/2023	Irene Gallion	Hello All, Attached is an analysis that seems to show that Eagle Creek, Salmon Creek and Twin Lakes do not improve emergency response times, and should be removed from consideration. Sunny Point provides the best leverage for emergency response time. Thank you, See CBJ letter dated 3/20/2023	Good morning Irene, Thank you for providing this analysis. We appreciate it. Morgan McCammon	3/20/2023	M. McCammon	Advisory Committee Comment - Meeting 3
3/20/2023	Roy Churchwell	Hello Morgan and PEL Study Team, I wanted to get you a couple of comments as you asked for those comments by today. I was not able to attend the last technical committee meeting, but I have looked over the documents and presentation from that meeting. It was good to read Krista Garrett's comments from SEALTrust, and I agree with their perspective including comments on the viewshed and consideration of the Mendenhall Wetlands Management Plan laying out regulation for using alternatives off the Refuge if they are feasible. I have just one additional comment beyond those of SEALTrust. I would suggest that both the Sunny Point Area and West Sunny Point Area should include the comment, "It encroaches into traditional and popular duck hunting area." Currently, this comment is only associated with the Sunny Point Area. A bridge crossing at Sunny Point and West Sunny Point Areas will likely end duck hunting as we know it on the Refuge. There are hundreds of people, mostly from Juneau who use this resource, but because about one third of hunter currently use this area it would be difficult to move that use across the	Good morning Roy, Thank you for your comments, we appreciate the input. Additional response in Level 1 Screening	3/20/2023	M. McCammon	Advisory Committee Comment - Meeting 3

		remainder of the refuge, and I imagine we would have to end or drastically change how hunters use the Refuge if the bridge crosses this location. Thank you for this additional opportunity to comment on the Level 1 Screening Results document. Roy				
3/20/2023	Mike Stanley	Dear Ms. McCammon and JD North Crossing Study Team, Attached please find the comments of the North Douglas Neighborhood Association, Second Crossing Committee, on the Level I screening results. If you have questions regarding these comments, or want to discuss NDNA's concerns in further detail, please advise. Thank you. Mike Stanley Chair, Second Crossing Committee NDNA See letter dated MARCH 20, 2023	Good morning Mike, Thank you for sharing your comments, we appreciate the input. Additional response in Level 1 Screening	3/20/2023	M. McCammon	Advisory Committee Comment - Meeting 3

3/20/2023	Christine Woll	Hi Morgan - Thank you for this opportunity to comment. I have a few related comments for consideration. I am speaking as an individual and do not represent the Assembly as a body in my comments. The stated reason for many who support a second crossing is ability to develop on the west side of Douglas Island. As a result, there may be many people and groups who are disappointed to not see the two northernmost options move forward, given that they provide the shortest route from this area to the Mendenhall Valley and hospital. If you move forward with eliminating these choices, I would suggest you better document the reasons for removal (ie., the infeasibility of these options). For example, providing a cost estimate of these options in the memo would provide a more compelling argument that these options are worth eliminating at this phase. Otherwise, you will have many in the community continue to hold up these alternatives as the best alternatives, which will severely hamper the ability of the community to bring this project to fruition. If you are not able to provide a bit more detail on the cost/feasibility for those two alternatives, I'd suggest moving those alternatives forward to the next stage so that you CAN provide that detail. Although I agree that these two alternatives are likely not the best routes given those feasibility concerns, I do worry that if there is still questions in people's minds about that then the project will hit political roadblocks early. On a related note, my understanding is that a second crossing can only be built across the	Good morning Assemblymember Woll, Thank you for sharing your personal comments, we appreciate your input. Additional response in Level 1 Screening	3/20/2023	M. McCammon	Advisory Committee Comment - Meeting 3

		Refuge if it can be shown that other alternatives are not feasible. I'm not legal expert, but that suggests to me that providing more detail on the feasibility of the Mendenhall Peninsula option will be necessary if people want to move forward with any of the options suggested that run through the Refuge. I'm not advocating for those alternatives that run through the Refuge nor the Mendenhall Peninsula option, but instead just pointing out that more feasibility information may be helpful for the northern routes to answer important questions early. Thanks, Christine Woll				

3/20/2023		NORTH DOUGLAS NEIGHBORHOOD ASSOCIATION SECOND CROSSING COMMITTEE COMMENTS ON PEL STUDY LEVEL I SCREENING RESULTS MARCH 20, 2023 The Second Crossing Committee of the North Douglas Neighborhood Association (NDNA) has reviewed the Level I Screening Results presented in a technical memorandum dated March 2, 2023, and also participated in the Technical and Stakeholder Advisory Committee meeting on March 6, 2023, and has the following comments on the screening results and issues that the PEL study team will be considering at Level II Screening. The PEL study team has recommended that only five of the preliminary alternatives advance for further detailed development – West Sunny Point, East Sunny Point, Vanderbilt, Twin Lakes, and Salmon Creek. Consistent with our prior comments (and also with comments we made during the last round of second crossing review, in 2005-07), NDNA does not take a position on which of these alternatives is preferable or that best addresses our concerns about impacts to the North Douglas area and our neighborhood. But we want to make several points regarding how these alternatives should be evaluated. 1. We continue to believe that the decision whether to build a second crossing and, if so, where, would benefit from an area planning process for North Douglas. We have been asking for an area plan for over two decades, to be conducted within the framework of the CBJ Comprehensive Plan, and will continue to pursue that goal. An area planning process would not only address issues related to a second crossing,	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		but would also consider impacts to North Douglas associated with other developments, including (but by no means limited to) the Eaglecrest gondola, expansion of the boat launch, potential commercial uses of the pioneer road, and further development around Fish Creek Park. We understand that a planning process is not within the scope of the PEL study, but it would make sense to retain all of the alternatives that passed Level I screening for possible review in such a process were it undertaken in the reasonably near future. 2. The overview of the Level II screening process identifies two main goals: to screen the remaining alternatives using a broad range of qualitative and quantitative criteria, and to compare and rank the detailed alternatives. Done right, this should provide a useful analysis, as it would allow the decision-makers (DOT and/or CBJ?) to evaluate which of the alternatives makes the most sense. Ranking would also provide the public a better understanding of the advantages and disadvantages of each alternative. And it would result in a suite of alternatives that could be considered in a subsequent NEPA process. It would thus be premature at this point to eliminate any of the current alternatives that have been advanced for further review. 3. The Salmon Creek alternative scored well on a number of the Level I screening criteria, and has the additional advantage of being the only remaining alternative outside the Mendenhall Wetlands State Game Refuge, which is a Section 4(f) property. The technical memorandum indicates that a thorough 4(f) review will be conducted during the ensuing NEPA process (assuming the project proceeds to that phase), and				

		it is therefore essential that the Salmon Creek alternative remains in the mix at the conclusion of the PEL study. The study team has preliminarily identified construction challenges for this alternative related to the Egan/Channel Drive intersection, but these are only generally described and are not the product of a rigorous and complete engineering analysis. 4. We reiterate a point we have made before: any alternative that proposes a transit corridor through the refuge must NOT include a substantial embankment/fill component, but should only be constructed as a raised structure, on pilings and abutments. The environmental impacts to the refuge from an embankment/fill structure will not pass scrutiny under 4(f) or other applicable standards. 5. In our comments on the preliminary alternatives, we commended the study team for including discussion of a bench road on North Douglas. While we understand that a bench road is not part of the PEL study, it would nevertheless be very useful if the remaining alternatives were evaluated based on their potential for connection to a bench road and the impacts to our neighborhood that would entail. In other words, the analysis should not be confined to assessing where and how crossing termini would intersect the North Douglas Highway, but should also consider the potential for connecting to an uphill bench road if one were built. The purpose and need statement emphasizes the goal of improving connectivity between the mainland and Douglas Island, and limiting the analysis to a brief description of where each alternative would land on the island side of the channel does not serve that purpose. 6. The stakeholder presentation described both					

		Sunny Point alternatives as having the advantage of terminating on CBJ property (at Hendrickson Point), and in the case of the west alternative, a further advantage of avoiding SEAL Trust conservation property. But the CBJ property at Hendrickson Point is designated as a "conservation area" under the current CBJ Comprehensive Plan (2013). Conservation areas are "lands recognized with high environmental qualities that are set aside for the protection and management of the natural environment…" (CBJ Comprehensive Plan, at 144). Hendrickson Point is an ecologically sensitive area, with important upland habitat adjacent to the Mendenhall Refuge. It also provides a view shed for homes in the area. The PEL study team should consider the status and environmental values of the CBJ property at Hendrickson Point during Level II screening. Thank you for considering these comments.				

3/20/2023	Merry Ellefson	Mayor and CBJ Assembly, Attached please find the comments of the North Douglas Neighborhood Association (NDNA), Second Crossing Committee, on the PEL Level I screening results. As a primary stakeholder, we appreciate your consideration of our history and feedback. We look forward to continuing to connect with all of you in person, working to better understand the decision-making points and process. I've also included NDNA's public testimony from August, 2022 as we support and sustain a vibrant, healthy neighborhood and larger CBJ community. Thank you for your hard work and time, Merry Ellefson For the NDNA Crossing Sub-Committee	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

3/20/2023	Bruce Baker	TO: jdnorthcrossing@dowl.com, the designated representative for: Alaska Department of Transportation & Public Facilities P.O. Box 112506 Juneau, AK 99811 AND City & Borough of Juneau 155 S. Seward Street Juneau, AK 99801 Subject: Your recommendation that the Mendenhall Peninsula second crossing alternative NOT advance to Level 2 Screening I support your recommendation that the Mendenhall Peninsula second crossing alternative NOT advance to Level 2 Screening because it is likely to have the highest construction and maintenance costs, owing to the length of structures and associated infrastructure needed to construct it. You conclude that the Mendenhall Peninsula option is potentially "fatally flawed" from a constructability perspective. Moreover, the Mendenhall Wetlands Study Group (MWSG), in its January 30, 2023 document, identified the Mendenhall River mouth as "the most important feeding habitat in the Refuge for waterfowl, terns, shorebirds, and other seabirds (Armstrong et al. 2009) and constitutes an important sand lance spawning area." The study group stated and that "If this alternative cannot be routed so as to avoid impacts to the Mendenhall River Estuary it should not go forward for Level 2 screening." and that "Tunneling from the Peninsula might be a better alternative if this route is	Good afternoon Mr. Baker, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	3/20/2023	M. McCammon	

		seriously considered." The reality is that the area of the North Douglas boat launch and the south end of the Mendenhall Peninsula are very much within the Fritz Cove-Mendenhall River estuary, and a crossing there should not be further considered. Sincerely, Bruce Baker				
3/20/2023	Scott Spickler	I would like to voice my support for the Sunny Point access location for the ND crossing. This appears to be one of the more cost effective choices with the least environmental impact. Thank you,	Good morning Mr. Spickler, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. 4/14/2023	Dave Hanna, StAC Member	Morgan, Thank you for keeping us posted. Do we have a date set for the next meeting? Thanks, Dave	Hi Dave, We do not have a date set yet and have not yet confirmed the format. These are details we hope to share soon. Thank you for checking. Morgan McCammon	4/14/2023	M. McCammon	Advisory Committee Email
4/21/2023	Ron Somerville, MWSG	Morgan: Our working group (Mendenhall Wetlands Working Group) would like to request a meeting with the 2nd crossing Dowl Group. Of course we would request it here in Juneau some date after April 27. Your help in setting up this meeting is greatly appreciated. Let me know what I can do to help. Much appreciated. Additional response Morgan, we need to schedule after the 27th as key folks are not available before then. Any date after the 27th should be fine. Go ahead and set a date and I will run it by everyone here. Thanks	Good morning Ron, Thank you for reaching out. The study team would be happy to meet with you. I would like to check if you are wanting to schedule this meeting prior to or following the next Advisory Committee meeting. I ask this because we said that the next meeting was scheduled for the end of April. Or if after April 27 is the best timing for the working group. Either way, I will get a meeting scheduled. Thank you,	4/21/2023	M. McCammon	Advisory Committee Email

4/25/2023	Patty Wahto Airport Manager Juneau International Airport	Thank you again for the great meeting this morning. Nice to see everyone in person. Below are the best contacts I have for Alaska, Delta and ATC for air traffic and approaches to JNU (and RNP) Patty	Meeting follow up.			Advisory Committee Email
4/25/2023	Phil Adams A.A.E., ACE Deputy Airport Manager Juneau International Airport	I agree, it was nice to meet you all in person! Below is the contact information for AK Seaplanes and for Island Air, pertaining to their RNP approaches.	Meeting follow up.			Advisory Committee Email
4/25/2023	Patty Wahto, JNU Airport Manager	Onsight Visit- Meeting with Patty Wahto regarding the Juneau Second Crossing Patty expressed concern regarding any changes which would impact the existing and future approaches. She stated that the Airport has requested Runway end 26 MALSR from their Congressional delegation. The MALSR off the 26 end would reduce visibility minimums for this approach. This information was provided to DOWL and State DOT employees present during the meeting in the form of meeting notes.	On-site meeting	4/25/2023	B. Mello	On-site meeting

4/27/2023	Ron Somerville, MWSG	Morgan, I am trying to schedule several meetings and was wondering if you had selected a tentative date for our requested meeting with the Dowl team on the second crossing? If you had an approximate date, it would be helpful. Thanks. Additional Response Morgan, this works for all 4 of us. Just give us a time and location or instructions for zoom or similar. Ron	Good afternoon Ron, Would you be available the afternoon of Thursday, May 11? Morgan McCammon	4/27/2023	M. McCammon	Advisory Committee Email
5/1/2023	Matt Little Director of DU Public Policy, Western Region	Hi Morgan, please add me to your email outreach list for this project. When is the next comment period re: alternatives? Thank you,	Good morning Mr. Little, Thank you for reaching out. I have added you to the contact list for this PEL study and to the Stakeholder Advisory Committee. The study team is accepting comments throughout the PEL Study at the study email address, jdnorthcrossing@dowl.com. Comments received earlier are easier to incorporate. We will soon be sharing the final Level 1 Screening Memo, updated based on Advisory Committee member input. Additionally, we will be scheduling the final Advisory Committee meeting soon. This meeting will present the results of Level 2 Screening, offer a committee discussion, and provide a comment period following. The draft PEL Study will be shared publicly with a comment period this summer, and finalized in the fall. Best regards, Morgan McCammon	5/2/2023	M. McCammon	Advisory Committee Email

5/2/2023	Royal T. Hill Jr. Tribal Development Department Central Council of the Tlingit and Haida Indian Tribes of Alaska	Good afternoon, I am curious on how it came to be that there would need to be a tunnel for the North Airport crossing. I was involved in this group, and we established that the road can be 500 feet from the end of the runway. I even mentioned during one of the meetings that when we drove pilings for the Brotherhood bridge that we did not hit bedrock until we hit the depth of 175 feet. A tunnel is not possible because it is all silt. This route is the shortest distance and doing a Key West style crossing would be the cheapest option. Thank you everyone.	Good afternoon Mr. Hill, Thank you for your question. After discussions with the Juneau Airport (JNU) manager and major air carriers, it was determined that any crossing near the north side of the airport would need a tunnel. At JNU, the Runway Safety Area (RSA) extends 600' beyond each runway end. The proposed alternative crosses approximately 500' beyond the western runway threshold and will be inside the RSA. FAA requires any above-ground features within the RSA to be frangible or fixed by function (e.g. Navigational Aids typically), which would not include a road or bridge. Moving the road alignment westward to avoid the RSA is also not an option. The road alignment would have to be far enough west to avoid conflicts with the approach lighting and the aircraft approach surface which begins 200' from the runway threshold and extends at a 34H:1V (horizontal:vertical) outward. At 500', there is less than 9' of vertical clearance under that 34:1 approach surface (300' / 34' = 8.8) so a road would not be permitted since the vehicles and street lighting would extend into the approach surface. The road alignment would need to be at least a half mile west of the runway threshold to have sufficient clearance. Additional considerations of a causeway structure in this area may include adverse impacts on the Mendenhall Wetlands State Game Refuge, habitat, and water flow. These factors led to the team suggesting a partial bridge and tunnel structure in this area as a preliminary alternative. Due to the evaluation outlined in the Level 1 Screening Memo, the team determined that the North Airport alternative would not move forward into Level 2 Screening. Please let us know if you would like to discuss this further or have	5/4/2023	M. McCammon	Advisory Committee Email

			additional questions. Thank you, Morgan McCammon			

5/4/2023	Royal T. Hill Jr. Tribal Development Department Central Council of the Tlingit and Haida Indian Tribes of Alaska	Good afternoon, Morgan. So, we can have a road 600 feet from the end of the runway? What team suggested the bridge and tunnel? I mentioned in past meetings that in every city I have landed at there are freeways and roads well under 600 feet from the end of the runway. Can someone please let me know if the fence that is 333 feet from the end of the runway 8 feet tall or 10 feet tall? Would that mean we would have to lower the fence. I really think this option should move forward to level 2. With the right planning and engineering this would be the cheapest option. Thank you.	Good afternoon, Mr. Hill, We appreciate your perspective. Your comments have been noted and included in our study records. In answer to your question about the distance required from the runway, the road alignment would need to be at least a half mile west of the runway threshold to have sufficient clearance. While many other locations have different considerations and environmental factors, this planning study considers conditions in the Juneau and Douglas Island area. Because of reasons stated in the previous email and the Level 1 Screening Memo regarding potential adverse impacts to the airport and the environment and geotechnical challenges, the study team determined that the North Airport alternative would not move forward into Level 2 Screening. Thank you for your continued involvement in the Advisory Committee. Morgan McCammon	5/15/2023	M. McCammon	Advisory Committee Email

5/11/2023	Judith and Rodney Mitchell	Can you please list the specific residential lots that will be impacted by each of the proposals or point me to where I can find that information? Also, can you describe what City rules or regulations apply when impacting or eliminating a residence? Is this "eminent domain"? For instance, will the owners be compensated at assessed value or some other pre-determined amount? What if the residence is not destroyed, but the value of the property is decreased due to road noise, etc.? I am hoping this will also be part of the information presented at the meeting on May 18th. Not sure if the City Manager/lawyer/Assembly needs to answer the above questions, so copying them as well. Thank you,	Good afternoon Ms. Mitchell, Thank you for your questions. At this point in the process, the study team does not know what properties might be impacted and will not likely know with certainty until much later in the process. We have identified general areas where the alternatives interface with Douglas Island and Juneau, but these are not intended to denote the acquisition of properties since we are still in the planning process. The study team is trying to use City and Borough of Juneau (CBJ) owned parcels rather than privately owned property where possible. The best information is located on the website, www.jdnorthcrossing.com. We encourage you to stay involved – when more specific details are known, we will share these with the public through the website and at future public meetings. The right-of-way acquisition process does not begin until after the PEL Study is finalized and after the environmental documentation (commonly referred to as environmental impact analysis) phase of any potential future project is completed. This is because we will not have an approved alternative and certainty on the needed space until that work is completed. The environmental documentation phase has not started yet and if/when it does start, it will likely be about two years in duration. If this project proceeds and an environmental document is completed and if funding is available, the right-of-way acquisition process would then proceed in accordance with federal guidelines. The Department of Transportation and Public Facilities (DOT&PF) complies with policies and provisions outlined in the Uniform Act for real property	5/12/2023	M. McCammon	

			acquisitions for projects. Please see the Statewide Right-of-Way Office website at https://dot.alaska.gov/stwddes/dcsrow/. This site contains many helpful resources for understanding the State of Alaska's obligations in the acquisition process. The brochure titled Acquiring Real Property for Federal/Federal-Aid Programs and Projects (see "Right-of Way Brochures" under "Resources") and Frequently Asked Questions about Right-of-Way are particularly helpful. Please note that the brochure document is intended to be printed and read as a booklet. The City and Borough of Juneau Assembly Public Works and Facilities Committee will hold a listening session on Thursday, May 18 from 5:30 – 7:00 p.m., for constituents to share comments on a potential north crossing (see attached) with their local elected officials. The study team will present a brief status update, including Level 1 Screening, the resulting detailed alternatives, and the next steps. Please let us know if you would like to discuss this or any other issues further. Best regards, Morgan McCammon			

5/12/2023	Linda Baker	Hello, It seems to me the assembly should also be taking written comments regarding the Juneau North Douglas Crossing Listening Session on May 18. By taking only vocal comments in the allotted hour and a half the assembly will not even come close to getting an accurate gauge of what the community wants. It also seems the assembly members have already made up their minds as to what they hope for as they are calling this meeting the Juneau North Douglas Crossing Listening Session. Come on! Let's get a more accurate and fair response from your constituents. You might try reading the responses given to the (PEL) study. I'm sure that will give you a much more accurate view of what Juneauites want than this "listening" session. Sincerely, Linda Baker	Hi Ms. Baker, CBJ has heard feedback from the public that the PEL process does not include an opportunity to give public testimony in the form of oral comments, so Chair Bryson has arranged for this session to have a platform for that. Different people prefer different means of communication, but rest assured written comment is always welcome and considered part of the public record (BoroughAssembly@juneau.gov). The last listening session went for an hour and half (though it was scheduled for longer), so that is where the timing came from. There is no intention to cut people off and we can extend the time to make that clear. The PEL process is run by ADOT, and although CBJ is a partner, it is not a CBJ project. This is another reason why the Assembly wanted to provide an opportunity for the public to communicate directly. I will clarify how to submit written comment and extend the time when issuing a reminder press release later next week. Thank you for your comments and helping this be a fruitful experience for everyone. Best, Katie Koester EPW Dir.	5/12/2023	Katie Koester	CBJ Comment Log

5/12/2023	Jim Dorn	I believe it is important for the public to know why the decision to Not Advance the Mendenhall Peninsula Option and the North Airport Option in the Initial Draft of the Level 1 Screening Results was reversed. It was, I believe, correctly determined Not to Advance this option and now all of a sudden it is still being considered! Why the change? It is important for those of us following this project to know what material information resulted in the change. This kind of unexplained action calls into question the transparency of the entire PEL process. Jim	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log
5/12/2023	Jim Dorn	What happened with the Mendenhall Peninsula option???? Why was the decision to Not Advance this alternative reversed? It was, I believe, correctly determined Not to Advance this option and now all of a sudden it is still being considered!!!!! I think it is important to know what material information resulted in the change. I think we all deserve a written explanation about the change of opinion and the explanation should be included in the written record of the PEL, so we all know what happened. This kind of action calls into question the legitimacy of the entire PEL process. I feel like we are getting blindsided by the process and that the process is not transparent.	Good morning, Mr. Dorn, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. The study team presented a draft version of the Level 1 Screening Memo to the advisory committees. The committees provided feedback, shared in the meeting summary posted on the website, www.jdnorthcrossing.com. Based on committee feedback, the study team added the Mendenhall Peninsula alternative back into consideration for further evaluation with Level 2 Screening. This was done to increase transparency regarding how alternatives are evaluated, allow the study team to collect additional data, further evaluate the detailed alternatives moving forward in the process, and share additional details publicly to show why alternatives move forward or not. Please let us know if you have any additional questions or concerns. Best regards,	5/18/2023	M. McCammon	

5/15/2023	Alex Wertheimer, Mendenhall Wetlands Study Group	The Mendenhall Wetlands Study Group would like to express our thanks to Marie Heidemann, Nina Keller, Christy Gentemann, and Steve Noble for taking the time to meet with us last Thursday, May 11. We greatly appreciated the opportunity to learn more about the PEL process and to provide the Project Team with more detail on our concerns and recommended alternatives to minimize the impact of a second crossing on the Mendenhall Wetlands State Game Refuge. As you know, we support the Salmon Creek alternative as the best route to meet the project goals while minimizing environmental impacts and damage to the Refuge. We understand that there is concern about the feasibility of the crossing at Salmon Creek because of the difficulty in providing sufficient bridge height clearance for the commercial barge operation that is just north of the proposed landing area for the bridge on the mainland side of the channel. We discussed whether the barge landing itself could be considered as the site for the bridge connection. Marie rightly pointed out the critical importance of the barge operation for the Juneau Community, making it inappropriate for purchase or imminent domain for the crossing. However, on reflection after the meeting, we came up with a concept that might make use of that site palatable. Would it be possible to build a barge landing site at the location now proposed for the bridge design, and trade that for the existing barge site to be used for the bridge? Now the bridge would be north of the barge landing. Here are advantages: 1. Easier and safer navigation for the barges. 2. Bridge height now needs to only meet whatever the Coast Guard deems necessary for the navigation channel through the refuge.	Good morning, Alex, Thank you for meeting with us last week. We appreciate the time and effort the members of the Mendenhall Wetlands Study Group continue to put into this study. Thank you for sharing your suggestions regarding the Salmon Creek alternative. They will be explored during the Level 2 Screening process. The study team is aware of the environmental considerations for the sensitive nature of the Refuge and appreciates the Group's willingness to provide thoughtful and constructive input to better the outcomes of the process. Best regards, Met with on 5/11/2023	5/18/2023	M. McCammon	Advisory Committee comment

		3. High point of the bridge would be mid-channel. Cost of building a new barge site would be substantial, but this configuration may reduce cost and enhance engineering feasibility of the bridge itself. Can the Project Team take a look at this concept as a potential Plan B at Salmon Creek, and evaluate it for feasibility and cost? It is possible to move a barge site, but the refuge cannot be moved. Thank you for your consideration,				

5/15/2023	Linda Baker	Assembly members, I am unable to attend the Juneau North Douglas Crossing Listening Session on May 18 so I am submitting my comments via this email. One of the main reasons for a 2nd crossing is in case the main bridge is inoperative for a period of time. Many of the people who work in Juneau live in Douglas plus kids who attend high and middle schools. It makes no sense to have their alternative access as far away as the Mendenhall Peninsula. A second crossing at Vanderbilt Hill provides a good alternative plus it would cut many miles off the trip to Eaglecrest. it would also be one of the least damaging to the environment and one of the most economical. Sincerely, Linda Baker	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log
5/15/2023	Jill Weitz Government Affairs • Office of the President Central Council Tlingit & Haida Indian Tribes of Alaska	Please keep me updated On opportunities for Tribal consultation, etc. as it relates to PEL process for potential North Douglas crossing. Many thanks!	Good afternoon, Ms. Weitz. Thank you for your interest in the Juneau Douglas North Crossing PEL Study. While formal consultation is not part of the PEL process, the study team would be happy to meet with you to discuss the Central Council's interests and/or answer questions you may have. Royal Hill and Stephanie Banua have been participating on the Stakeholder Advisory Committee. Please feel free to contact us with specific questions or to schedule a meeting, we welcome input from all stakeholders. Best regards, Morgan McCammon	5/18/2023	M. McCammon	

5/16/2023	Gina R. Heffern	Members of the Assembly, I am writing to provide my comments on the Juneau-Douglas Second Crossing following the Level 1 Screening Memo. I firmly oppose the Mendenhall Peninsula option which was originally described in the draft memo as "fatally flawed" from a construction perspective. This option seems as though it would have the largest negative impact on our environment and our viewshed while simultaneously having the smallest positive impact on reducing traffic from the existing Juneau-Douglas crossing and smallest increase in emergency access. As a resident of North Douglas as well as a healthcare worker I am highly concerned that a second crossing improves emergency access and this option does not. A more central option would significantly help with emergency access. Perhaps the fatally flawed Mendenhall Peninsula option was reintroduced into the Level 1 group due to the potential for business development along the spine of the peninsula, however a more central crossing alternative that would meet current critical needs of Juneau residents, would not preclude future development of the spine of Mendenall Peninsula. Additionally, this option is inconsistent with CBJ's Comprehensive Plan due to its impacts on a protected viewshed and does not maintain the visual, cultural, and scenic identity of our community.	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		Please consider removing the Mendenhall Peninsula crossing alternative from advancement. Thank you for accepting my comments. Gina Heffern				
5/16/2023	Greg Capito	With the city's population in a steady decline, this project is not necessary or needed. Instead, focus resources on maintenance of our existing highway system which is in serious need of repair.	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

5/16/2023	Barb Mecum	Dear CBJ Folks, I appreciate the opportunity for another CBJ Listening Session on May 18, regarding the second crossing. With the Mendenhall Peninsula Alternative oddly back in the mix (already eliminated by the PEL Study back in March, but recently reversed), I am once again submitting my comments here since I am traveling the evening of the 18th and not able to attend in person nor by Zoom. I remain in opposition to the Mendenhall Peninsula Alternative, and 112 friends and neighbors who agree have signed the petition which states: --- Friends of Fritz Cove Petition Attention: Juneau Assembly & Planning Commission, Alaska Department of Transportation & Public Facilities, and DOWL. We, the undersigned, oppose a bridge across Fritz Cove between the end of Mendenhall Peninsula and the vicinity of the North Douglas boat launch ramp. ● It would not reduce congestion during peak periods on the Douglas Island Bridge. ● It would be the longest and most expensive (four times more according to estimates) second crossing alternative, requiring a very costly bridge across Fritz Cove and a new road down the Mendenhall Peninsula. ● It would not reduce travel time for medical and other first responders, and would create the longest route to the hospital if	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		Douglas Island Bridge was closed. Douglas residents' work and shopping travel times would be extraordinarily long if Douglas Island Bridge were closed. ● It would have a significant negative impact on Fritz Cove whales, sea lions, and other marine life. ● Hopes for the development of the west side of Douglas Island are doubtful because Juneau's population isn't increasing and many government offices are moving to the Anchorage area. --- I appreciate the opportunity to be added to the record, and your willingness to hear from Juneau folks on this important issue. Sincerely, Barb Mecum				

5/16/2023	Margo Waring	PEL Comments May 16, 2023: Juneau Borough Assembly Thank you for the opportunity to comment on the work of the PEL study. First, to the best of my knowledge, residents on North Douglas have identified a need for faster access to emergency services, especially medical services, and Valley locations. Mendenhall Valley residents have identified recreational access (Eaglecrest, Fish Creek park, 9 Mile Creek, and winter marine mammal viewing at Fritz Cove. Commercial interests have been interested in expanding recreational uses of North Douglas for summer tourists. There are crossing alternative between the airport and downtown that meet most of these goals. But we should note that crossing alternatives beyond the airport actually diminish or negate these goals. For example, a Mendenhall Peninsula crossing would diminish tourist use of kayak tours, diminish opportunities for extremely popular winter marine mammal viewing, and so forth. Please note that these locations, popular with both residents and commercial visitors would be jeopardized or lost for those crossing locations beyond the airport in support of interests that would profit from commercial opportunities based on public investment of scores f millions of dollars to make their aspirations viable. In summary, the Mendenhall Peninsula and other alternatives north of the airport not only fails to meet residents' stated needs but actively harms them in both the short and long term. I also ask the Assembly to consider that Juneau's population is forecast to continue to decline over the next decade. If the forecast proves correct,	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		it means that property tax and other tax burdens will be shared by a stable or declining population and, even factoring out debt retirement, the burden of a second crossing and the subsequent push to implement the expansive West Douglas plan for new CBJ roads, water, sewer, schools, waste disposal, police and fire infrastructure and base costs, run the risk of an insupportable tax burden, even if the docks and associated infrastructure are built with debt and operating costs are paid for by the shipping and cruise industries. I urge you to continue to consider carefully in deciding whether and where a second crossing should be built, weighing not only the extent to which alternatives meet stated residents' goals and willingness to increase tax burdens but also weigh increased "access" against lost access and lost environmental and ecological resources. Margo Waring				
5/17/2023	Allen Shattuck	I strongly support the second crossing and my preferred alternative is the Sunny Point crossing. It provides the most convenience for Juneau citizens and the most expeditious route for emergency services. Thanks	Good morning, Mr. Shattuck, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards,	5/18/2023	M. McCammon	

			Morgan McCammon			
5/18/2023	Leah Heiman	To the Assembly, I hope my written testimony will bear equal weight to those who come to speak in person. Public speaking is hard for me but I'm taking the time to put my thoughts in writing. I have previously written to the PEL study people about the use of my neighborhood, Mendenhall Peninsula, for a new bridge going to Douglas. I have lived and cared for my home on MenPen Road since 2010 and hope to call it home for many years to come. My family regularly walks the road often picking up trash to take care of the neighborhood. My young son learned to ride his bike on this road and we still regularly bike here. I have had a heavy heart and anxiety every time I'm reminded of the threat of the neighborhood being drastically changed with the building of the bridge here on Mendenhall Peninsula. I see in the recent documents that the Mendenhall Peninsula option supposedly has a "high" level of public support. I wonder if that support is from people who don't live here on the peninsula. I do live here and I am most definitely not in support. I fear the negative impact of several years of construction disruption and noise, widened roads and long-term increased traffic in our currently quiet neighborhood.	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		I have heard and seen maps alluding to three ideas of how to build the roads and bridge on Mendenhall Peninsula so I don't know if all of these options are still being considered or not. 1) I have seen maps that show the bridge connecting to the end of Mendenhall Peninsula Road. A north crossing at the end of “MenPen” road would greatly increase traffic on our narrow, no-outlet road. It would likely require widening the road taking property from homeowners along the road putting our houses closer to a wider, busier, faster moving road. No more walks or bike rides along the road. Highway noise rather than neighborhood sounds. This option would also increase traffic on Engineer's Cutoff which is narrow and curvy. When Engineer’s Cutoff is open as a pass-through to Fritz Cove during spring, summer and fall, traffic on Engineer’s Cutoff increases quite a lot and it is more dangerous as more vehicles zip around the curves. I often worry for the pedestrians and bikers I see on the sides of that road. Widening Engineer's Cutoff Road to accommodate more traffic is a lousy option due to the negative impact on homes along Engineer’s Cutoff. 2) I have also heard the idea of connecting to the end of Fritz Cove Road. Although Fritz Cove Road is already wider and might not need as many changes, I’m concerned using that road would increase traffic on Engineer’s Cutoff as well. 3) I have also heard the idea of downing the forest over the top of the peninsula to build a road down the middle of the peninsula. I haven't seen a lot of specific details on how this would connect to Engineer's Cutoff where it crosses that road. But this option has potential to				

		increase traffic on Engineer's Cutoff too and to disrupt both the neighborhoods on the whole peninsula. In addition, I'm guessing this would negatively impact the wildlife populations on the peninsula. Deer and bear are regular backyard visitors in our area. In summary, please consider WHERE the "high levels of support" are coming from with each of the options. If there is an option in which the neighborhoods that are impacted support the changes to their neighborhood, that is very different from developers or others looking for easier access to Eaglecrest for entertainment supporting an idea because they won't be negatively impacted and will only profit. If a bridge is essential, I hope you can find a way to get the road/bridge that's needed for emergency/safety purposes that is fiscally conservative to the community and doesn't negatively impact existing neighborhoods or destroy more of the wild beauty of this area in the name of further development and growth. Don't "pave paradise and put up a parking lot" as the song goes. Thanks for reading, Leah Heiman				

5/18/2023	Hillary Reynolds	To the Honored Assembly Members, Hello! My name is Hillary Reynolds, and I reside with my family on Engineers Cutoff Rd. I wanted to share some insight regarding the proposed bridge from Mendenhall Peninsula to North Douglas. There are a few considerations that you may not be aware of without residing in that area. First of all, you probably realize that the road is narrow. In the winter (when people would be trying to go to Eaglecrest), the road is often reduced to single lane traffic in areas with the snow berms. Without the berms, it is still very narrow in areas and does not have a shoulder which already makes traversing precarious; especially when the Cutoff to Fritz Cove is open. (and that traffic would be comparatively low versus traffic to/from North Douglas!). In order to widen the road, there would be the immense cost of purchasing land from the numerous residentst. Additionally, many of us have our septic drain fields in the front of our houses which means that, unless the city is going to invest in putting everyone in the area on city sewer, then CBJ will have to pay to relocate, re-engineer, and recertify new septic systems. Either way, these added costs will be great, and would up the cost of the project significantly. While I am not a fan of crossing the wetlands in any case, I would think that the Vanderbuilt crossing would make more sense as it has little residential impact and thus, lower associated costs. Thank you for your time and consideration, Hillary Reynolds	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

5/18/2023	Patty Fiorella	While I'm an old coot who prefers no new crossing, I realize change is coming and see the need for safety/emergency purposes, so I am putting my plug in for Vanderbilt. I think Mendenhall Pen would make it too easy for folks that like to dump their junk and I am seeing that with greater frequency already. I would like to see the least amount of wetlands impacted so do not favor either Sunny Point crossing, but it seems silly to build much closer to town and the existing bridge. Vanderbilt seems like a good compromise with an existing intersection already there. I do pity whoever lives nearby, especially on Douglas, whichever connection you make.	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log
5/18/2023	Bob Varness	I am in favor of the proposed Vanderbilt Hill crossing. I believe it would be the safest and least expensive route with minimal environmental disruption to the wetlands. Best Robert Varness	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log
5/18/2023	Corey Baxter	Assembly Members, The Operating Engineers local 302 is in full support of a North Douglas Crossing. We believe that the crossing should be as fair away as possible from the current Juneau Douglas Bridge. The 3 options that make the most sense would be Mendenhall Peninsula, West Sunny point area and Sunny point area. Our members look forward to building this project someday. Thanks Corey Baxter District 8 Representative	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

5/18/2023	Merry Ellefson	Mayor Weldon and CBJ Assembly members, Thanks for your time set aside to listen to the community on a topic which prompts us to look further than a crossing. I'm writing as a citizen (not representing North Douglas Neighborhood Association) I've been thinking about how to study this idea differently and have questions re: the process and our CBJ. 1. If we study a decision-making matrix re: the crossing issue, i.e. when are decisions made, who is ultimately in charge of the footprint of our community? The state, CBJ, feds, all, how? How can the community better understand the next 2-4 years of what you perceive to be the crossing planning process? 2. I'm not so good at visioning 25-50 years ahead; are you? As we transform and continue to take care of the reasons that make Juneau home to many (tangible and intangible) who in the CBJ guides this long term planning, exactly… and if we are doing that, can we better understand this planning process? Coincidentally, I studied urban planning in Norway; it would be pretty helpful to send a delegate to places like Bergen, Trondheim, Lofoten and designated areas in between that do connect communities with bridges and the values or questions that guided these. 3. How do existing sub-area plans (e.g. Lemon Creek) or those yet to happen (North Douglas) fit into the process of discussing the second channing crossing? 4.	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		I've lived on North Douglas (in a trailer for 8 years, now a home): I've learned through the PEL process that even DOT wouldn't design a residential highway like ours anymore. It's not a safe merging of vehicles and pedestrians. We don't even have a nonmotorized route to get our kids or ourselves to town. As you contemplate the crossing and community feedback, I encourage you to study transportation in our hood BEFORE a crossing happens. What is the plan to make North Douglas Highway safer re: for those who live and recreate here as traffic increases, that is, 75000 more tourists headed to EC for the gondola, and an increase in commercial tours at the boat launch, potential Fish Creek upgrades, etc. ? Thank you for considering my questions. Merry Ellefson				
5/19/2023	Breckan Hendricks	Hello Breckan - For the adminstrative record, I'm attaching a copy of the testimony that I prepared for this evening's zoom meeting. Bruce Baker	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

5/21/2023	P Rorick	Hello! Thank you for taking comments on the proposed second crossing from Douglas to Juneau. I do not support a second crossing at this time. I have attended several information sessions and the need for this project has not been proved to me. It is a huge expense and unnecessary. Please use the money for projects that are needed. Thank you, Patricia Rorick Juneau, AK	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

5/21/2023	Bonilyn Parker	Greetings, Unfortunately, I was unable to participate in the listening session due to work commitments. I was very surprised to see in the Juneau Empire yesterday that the majority of the participants support the Salmon creek location. In my opinion, this is too close to the current bridge to be effective or worth the cost. It's going to be a costly investment either way, but it won't be worth the investment if it's in the wrong place. As far as environmental impact on the wetlands goes, we already have a dump and an airport in the wetlands. A bridge wouldn't have anywhere near the negative impacts that those things already have. It makes the most sense from that perspective to keep the bridge closer to those sites, rather than spreading out the impacted areas. As far as traffic mitigation goes, it makes the most sense to connect high traffic areas. The sunny point crossing would connect North Douglas to the most central location on the mainland, close to the industrial area, the airport and the hospital. On the Douglas side, it is much closer to Eaglecrest and the North Douglas Boat launch, which are the only destinations on the north side of the island. From a North Douglas Resident who supports a second crossing, the Sunny Point locations are the obvious choice. Bonilyn Parker	Hello, Ms. Parker. Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	5/22/2023	M. McCammon	

5/22/2023	Jeff Hoover	Hello I'm a Juneau resident of 30 years and I wanted to submit comments on the 2nd crossing bridge. I recently read that the Salmon creek crossing was the preferred option for most of the Juneau residents testifying at the recent CBJ meeting. Although the location may make sense for access to Bartlett hospital, I don't think it's a good alternative for a 2nd bridge. In my opinion, the proposed Salmon Creek location is too close (about 3.3 miles) to the current Juneau bridge and doesn't really had much value to the city or the residents. If CBJ wants to build an expensive 2nd bridge to Douglas Island then it should be closer to the valley where most of the population lives. I've read that some of the 2nd crossing options have concerns about wetlands and that should be a consideration but not the only consideration. In my opinion, the two Sunny Point options are a good compromise for a 2nd crossing: -Still close to Bartlett hospital for emergencies out North Douglas highway -Very close to the Airport for quick access to our primary transportation method out of Juneau -Close to the Valley where it gives better opportunity for most Juneau residents to use the bridge -The access property is owned by CBJ so the overall cost would be constrained My second bridge alternative would be Vanderbilt hill option for similar reasons to the Sunny Point options. I don't like the Mendenhall Peninsula option since it would	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		dramatically change an established residential area. For the bigger picture, I don't think the 2nd crossing is the highest priority project for CBJ funds. I think the city needs to use more funds for improving the dump area (area should be under CBJ control and not private), selling land for residential housing uses and controlling the increasing impacts of cruise ships. All of these areas impact local residents more than a 2nd crossing. I was trying to keep my comments short and I don't have more time to fully expand on all the comments I've made. Thank you for your consideration. Sincerely Jeff Hoover South douglas island resident				

5/22/2023	Christopher Schleck	Good afternoon, Thank you for taking public opinions on the proposed bridge. I do not think another bridge would be worth it. I live on Douglas and have never experienced congestion. The only locations that make some sense to me are the northernmost crossings, but even then, the return on such a large investment seems minimal. The southern 2 or 3 options seem way to close to the current bridge, with not nearly enough commute reduction to make it worthwhile. I appreciate the opportunity to be heard. Thank you for reading this. -Chris Schleck	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log
5/22/2023	Boni Parker	Greetings, Unfortunately, I was unable to participate in the listening session regarding the second crossing due to work commitments but I still wanted to share my opinion and hopefully haven't completely missed my opportunity. I was very surprised to see in the Juneau Empire that the majority of the participants support the Salmon creek location. In my opinion, this is too close to the current bridge to be effective or worth the cost. It's going to be a costly investment either way, but it won't be worth the investment if it's in the wrong place. As far as environmental impact on the wetlands goes, we already have a dump and an airport in the wetlands. A bridge wouldn't have anywhere near the negative impacts that those things already have. It makes the most sense from that perspective to keep the bridge closer to those sites, rather than spreading out the impacted areas. As far as traffic mitigation goes, it makes the most sense to connect high traffic areas. The sunny point crossing would connect North Douglas	Comment to CBJ, which was shared with the PEL Study Team as a curtesy			CBJ Comment Log

		to the most central location on the mainland, close to the industrial area, the airport and the hospital. On the Douglas side, it is much closer to Eaglecrest and the North Douglas Boat launch, which are the only destinations on the north side of the island. From a North Douglas Resident who commutes to Auke Bay for work three times weekly and strongly supports a second crossing, the Sunny Point locations are the obvious choice. Bonilyn Parker				
5/30/2023	Craig E. Dahl Government Affairis Greater Juneau Chamber of Commerce	Morgan, Is there a date in mind for the next meeting as referenced in you May 2nd email? Regards	Hi Craig, Thank you for your continued participation in the PEL study process. We are still working to set a date for the next meeting. We will be in touch with an update in the next few weeks. Best regards, Morgan McCammon	6/5/2023	M. McCammon	Stakeholder Advisory Committee
5/30/2023	Frank Rue, President Sunny Point Neighborhood Association	Dear Morgan, I am writing to ask if you would be willing to meet with members of the Sunny Point Neighborhood Association to go over the Draft PEL Level 2 analysis of the Juneau Second Crossing when you have it ready for public review. Sunny Point is the focus of two of the crossing options that were kept as the PEL moved from Level 1 to Level 2 Analysis, and, as such, there are important issues for all of us on Sunny Point to consider and discuss with you. Please let me know if a meeting will be possible and, if so, when you think DOWL will have its draft Level 2 analysis ready. We will be happy to find a	Good afternoon, Frank, Thank you for contacting us regarding a presentation to the Sunny Point Neighborhood Association. We would be happy to meet with you to discuss Level 2 Screening results once finalized and discussed with the Advisory Committees. Alternatively, we can meet earlier to share PEL study updates, hear comments and concerns, and respond to questions the group may have. Please let us know your preference. Best regards, Morgan McCammon	6/5/2023	M. McCammon	Stakeholder Advisory Committee

		place to meet. Thank you for your consideration. Sincerely,	Project team met with SPNA 6/29/2023			
5/30/2023	Patty Wahto, JNU Airport Manager	Onsight Visit– Meeting with Patty Wahto regarding other DOWL projects- Juneau Second Crossing discussed during the end of our meeting Patty mentioned that funding for the Runway end 26 MALSR is anticipated and she again stated that any Juneau 2nd Crossing should avoid impacting existing and future approaches. This information was provided to DOWL employees in charge of the Juneau Second Crossing project.	On-site meeting	5/30/2023	B. Mello	On-site meeting

5/31/2023	Carole Bookless	I have not seen an artistic interpretation of the different options for the Crossing. How can anyone determine how the different options “Maintain the visual, cultural, and scenic identity of Juneau and Douglas.” without some sort of rendered or photographic interpretation of the different options. Please provide this for the next public consultation meeting. Carole Bookless Douglas, Alaska PS. I am also concerned about the lack of options to get to the far side of Douglas where expansion of development is proposed. Considering that the one road available to get past False Outer Point was closed due to avalanche in recent past, how can we establish an avalanche proof route to that area? Any feasibility study should address this issue. Considering residents have survived this long without a Second Crossing, I assumed that the reason behind spending all this money and making these monumental changes was to facilitate that expansion which includes a wider, safer roadway.	Good afternoon, Ms. Bookless, Thank you for your continued interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. At this point in the PEL study, we are not prepared to create renderings of each alternative. Renderings at this point could provide misleading information, as crossing designs, intersection configurations, and impacts for the alternatives have not yet been fully explored. The intent is to provide these renderings for the recommended alternative(s) as part of the final document. One consideration for alternatives advancing through Level 1 Screening was the likelihood of avalanches in the area of the preliminary alternatives. Those located in an area designated higher risk for avalanches were eliminated. Thank you for bringing the rockfall on North Douglas Highway to our attention. It was not within the area considered for a crossing location. The PEL study is based on the Purpose and Need Statement developed during the early stages of the study. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	6/6/2023	M. McCammon	

5/31/2023	Linnea Osborne	Greetings! I have attended both recent public presentations and am disappointed that the level 1 screening document continues to omit a note that the West Sunny point option (on page 14) is in close proximity to a fire hall thus improving emergency response time for first responders. The Salmon creek option includes a note that it is in close proximity to the hospital and it seems reasonable that a similar note should have been included for the west sunny point option – this was provided in citizen testimony. The omission of this note appears to indicate that your study favors one option over another by omitting a critical safety improvement. This is very disappointing. Thank you for the opportunity to share. Sincerely,	Good afternoon, Ms. Osborne. Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	6/1/2023	M. McCammon	
5/31/2023	greg capito	Stop this nonsense now! Quit chasing federal dollars. Focus instead on maintaining our existing highway system.	Good afternoon, Mr. Capito, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	6/1/2023	M. McCammon	

6/4/2023	Frank Rue	Hi Morgan, Thank you for your offer to meet with the Sunny Point Neighborhood Association. I think it would be good to meet this month and that way you can bring folks up to speed on the PEL process and timing, answer questions, and hear from the folks who live on Sunny Point. I think it will also be good to meet again when you have the draft Level Two Screening results later this summer/fall. If that works for you then let me know when you are available this month and we can work out the logistics of a meeting. Thank you. Sincerely,	Project team met with SPNA 6/29/2023			Advisory Committee Comment
6/6/2023	Cody Hargreaves Sr. Principal Performance Based Navigation (PBN) Engineer Flight Operations – Engineering & Fleet	Hi Nina, Are you able to provide me with an AutoCAD file or similar? All of our analysis of obstructions is done using Lat/Long/MSL Height, so being able to determine location and height would aid us in answering your questions. Regards,	Hi Cody, We put some files together for you. I sent them to you via our file share system. Please let me know if that is what you are looking for or whether you need different information or in a different format. Thank you so much for working with us! Nina	6/14/2023	N. Keller	Advisory Committee Comment

6/7/2023	Cliff Sato | Delta Air Lines - Technical Pilot Airspace and Procedures Fleet Integration | Line Operations	Hi Nina, Thank you for including us. I'm happy to answer these questions along with our Instrument Flight Procedure team here at Delta. Please allow me some time to give you answers with exact numbers to changes in minimums. Is there a specific timeline you'll need these answers? As for the more general answers: 1. How do the proposed bridge locations affect existing and/or proposed RNP approaches? Please explain and rank from most impactful to least impactful. Every approach at Delta and most other commercial carriers is flown in what's called a "constant descent". If you could imagine a line going up from the runway at a defined angle, our aircraft would have to clear obstacles below that imaginary line going up. For this reason, obstacles (in this case the proposed bridge) further from runway end have less of an impact than obstacles closer to the runway. Looking at the proposed locations, this logic would follow. The location with the LEAST impact to airport operations would be the bridge furthest east down the Gastineua Channel a. Regarding proposed RNP approaches would the proposed bridge impact approach minimums or cause the RNP approach to be canceled? We will provide these answers shortly 2. Are there any proposed bridge locations that would affect a missed approach? Please rank most impactful to least impactful. I will provide more detailed answers, but at first look the bridge location west of the runway may	Hi Cliff, Please let me know if you need additional information. Would it help you for the simulation if I send you AutoCAD files? Thanks, Nina	6/16/2023	N. Keller	Advisory Committee Comment

		cause issues with the missed approach for the LDA approach. The missed approach for the LDA to Runway 08 does an immediate right hand turn to avoid going down the channel. This maneuver is necessary when the Juneau Airport Wind System reports turbulence in the channel that is not safe / suitable for operations. 3. Are there any proposed bridge locations that would affect a one-engine-out? Please rank most impactful to least impactful. Both RWY 08 and Runway 26 Engine Out Procedures go west of the airfield. I'll defer to our performance engineering team and @Hill, Christopher W, but for the same reasons in answer 2, the bridge west of the airfield will have the highest impact to our operation, and the bridge furthest to the east in the channel will have the least impact. 4. Would it be possible to determine the maximum height of the bridge at the locations depicted in the graphic that would not impact existing or proposed RNP approaches? If so could you please provide the max heights of each location? Yes – we can do this analysis. 5. There is a potential for the bridge to be lighted, would lighting affect existing or proposed approaches? Do you have any concerns with the bridge being lighted? Would shielding be a good mitigation effort? Lighting on obstacles does not change the obstacle clearance surface that we must fly above. However, if the obstacle is in the "visual segment" of the approach (below our minimums), it would be very important that the obstacle is lit for safety. I'm sure this would be done.				

		Lighting at the airfield and approach lighting has an impact in lowering the visibility for minimums on approaches. 6. We understand that the ATCT will have aircraft hold off Spuhn Island, do any locations that are proposed cause concern for your airline? We will need further information regarding the hold (i.e. altitude / radial / DME / turn direction / leg length). Our RNP RWY 26 includes 2 transitions from the West (CUSHI, SSR) at 7000 feet. Depending on how the hold is defined, this may or may not have an impact on the procedure. For those I've CC'd, please include any corrections or refinements to these answers that you can. We'll be working on the specific details of minimums and obstacle heights for you shortly. Respectfully,				
6/12/2023	Albert Shaw	I was at the worksession on May 18th and would like to add a few more ideas. I am the person who put Eaglecrest together and I try to be sure every effort is made to make it easier to get there. Thus I am in favor of the Airport-Sunny Point route over any other. The information talks of WET LANDS but by the time this project is done lt it will all be DRY LANDS. As you are aware there are already trees over much of this route.	Good afternoon, Mr. Shaw, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards,	6/12/2023	M. McCammon	

			Morgan McCammon			
6/13/2023	Scott Van Valin Director of Operations Island Air Express	Please provide the latitude/longitudes for the corresponding elevation points in order for us to determine if the locations and heights interfere with our proprietary IFR arrivals and departures. Thank you,	Hi Scott, Did you receive the files I sent via our file share system? The table below was put together to help this effort. It provides the latitudes and longitudes for each alternative. Do you need any additional information? The points depict the end of abutments for signals and the center of the bridges. Center latitudes and longitudes for the Sunny Point alternatives are located where they diverge from each other. Thanks, Danielle Dance, EIT Transportation Designer DOWL - dowl.com From: Nina Keller Horne Sent: Saturday, June 17, 2023 6:43 PM To: Chilson, David (FAA) Cc: Sean Holland; Danielle Dance; Steven Noble Subject: RE: [EXT] FW: Juneau Douglas North Crossing PEL Studies | Potential Airport Impacts Hi David, I am connecting you with Sean and Danielle, the			

			engineers working on this project. I discussed your questions with Sean and he (or Danielle) will get in touch with you. Thank you again for working with us to be able to provide answers to the question we sent to you. Thanks, Nina			

6/15/2023	Frank Rue	Hi Morgan, I haven't heard back from you, so thought I would remind you of my request for a meeting with you and the Sunny Point Neighborhood Association. Is that still a possibility?? Sincerely, Frank Rue.	Goon morning, Frank. Thank you for reaching out, and I apologize for the delay. The study team is working to coordinate schedules. We should have some dates and times soon. Best regards, Morgan McCammon Additional Response Good afternoon, Frank and Sunny Point Neighbors, Would association members be available to meet next Thursday, June 29, sometime between 1:00 and 3:00 p.m.? The study team has availability and, if needed, the DOT&PF conference room is also available. We look forward to meeting with you. Thank you, Met with SPNA on 6/29/2023	6/16/2023	M. McCammon	Advisory Committee Comment

6/15/2023	Cody Hargreaves Sr. Principal Performance Based Navigation (PBN) Engineer Flight Operations – Engineering & Fleet Technology	Thanks Nina, I'm looking through the AutoCAD files. Are the elevations shown in the PDF file you sent MSL or AGL? Thanks, Additional Comment FAA uses NAVD88, so that matches up with what we use. I just wanted to confirm that the elevations listed in the PDF were not AGL, in which case we would need to add the ground elevation. Thanks,	It's on NAVD88 datum, like the airport. Our engineer is not sure what the relationship is to MSL in Juneau. Do you need something in a different format than it is? Thanks, Nina	6/15/2023	N. Keller	Advisory Committee Comment
6/16/2023	Scott Van Valin Director of Operations Island Air Express	Hello Nina, That could help as long as out procedures team can open AutoCAD files. Go ahead and send it please. Thank you,	Hi Scott, I sent you the AutoCAD files via our file share system. I will be out of the office next week, but I am cc'ing Sean and Danielle, the engineers working on this project, in case you can't open the files and need additional information. Please let us know if that is what you are looking for or whether you need different information or in a different format. Thank you so much for working with us to provide us with the information we need! Nina	6/17/2023	N. Keller	

6/21/2023	Frank Rue Sunny Point Neighborhood Association	Hi Morgan, We will have at least eight Sunny Point residents available to meet on June 29 at 1PM. I am inviting you and the project team to hold the meeting at my home at 7083 Hendrickson Rd. It will give us all a good view of the proposed west Sunny Point Alternative route as we discuss the options and issues. After the meeting, you and anyone else interested, are invited to visit Jim and Jackie Triplett's home to get a very panoramic view from their deck of the east Sunny Point alternative route. People have different levels of understanding of the PEL process, so it would be good if you could summarize what the PEL process is, where you are, what you expect to accomplish, when you hope to have it finalized, and what comes next. It will be important for folks to let you know what they think the issues are surrounding the Sunny Point options and what they feel about other options as well. At this point we are not planning on having a neighborhood association position on the alternatives. Let me know if you can have the meeting at my home on Sunny Point. And thank you for your willingness to meet with us. Sincerely,	Good morning, Frank, The study team would be happy to meet with you and the association members available at your home. Thank you for sharing what information would be most helpful to present to the group. We look forward to meeting with you to hear comments and answer questions. Thank you, Met with SPNA on 6/29/2023	6/22/2023	M. McCammon	Advisory Committee Comment

6/22/2023	David Chilson Alaska District Airspace and Procedures	No impact to current procedures however how tall will the cranes be that help construct the bridges and how long might they be in place?	That's a really tough question at this point David. We don't have any geotechnical information at all in the channel so no idea how many piles, how long or how big which, all of which would dictate the size of the equipment needed and durations. Adding a layer, different contractors have different types of equipment to accomplish the work that may have different heights and may have different durations. Likewise no design on the bridge spans, longer girders would require larger cranes and may require temporary working structures. The height of the crane could be 200'-300' above the bridge deck and it could take a year or more to drive piles and place girders. Sean	6/22/2023	S. Holland	
6/23/2023	Frank Rue Sunny Point Neighborhood Association	Hi Morgan, We look forward to our meeting at 1PM June 29 at my home (7083 Hendrickson Rd). Paper handouts will work best since we don't have a screen for visual presentations. You will be able to park in our driveway. How many of you will be attending? Thanks and see you next Thursday. Call if you have questions. Sincerely,	Hi Frank, We will likely have two to four study team members attending. DOT&PF Project Manager Marie Heidemann and DOWL Assistant Project Manager Nina Keller are both confirmed. The team will plan to bring paper handouts for attendees and can leave extra materials with you. We can also email materials for those unable to attend. Thank you, Met with SPNA on 6/29/2023	6/23/2023	M. McCammon	Advisory Committee Comment

6/23/2023	Cliff Sato | Delta Air Lines - Technical Pilot Airspace and Procedures Fleet Integration | Line Operations	Hi Nina, I apologize for the time it is taking to consider these bridge locations. Because of the possible severity of the outcome, we want to ensure the results we give you are well vetted. Though we can generalize about the locations and height of the bridge, what we don't know is the impact of the construction of the bridge. Specifically, we have to assume that the cranes required to build this bridge will be significantly taller than the bridge itself. I can say that with regards to our performance concerns, we have evaluated that the Mendenhall location would not impact the missed approach for the LDA to RWY 08 or our engine out procedures which avoid going up the channel and are required when certain windshear conditions exist in the channel. For this reason, at this time the Mendenhall location is the only location we can support until we do further analysis on what the potential construction impacts will be on sites east of the runway. Until we receive information on what specifically will be used to build the bridge, we cannot guarantee there will not be an impact which leads to a loss of service to JNU. Thank you for including us in this conversation. When there is information regarding construction specifications, we will be able to give you a more accurate answer to effects of service. Please keep us as part of your team when you have this information. Respectfully,	Thank you, Cliff. The table below was put together to help this effort. It provides the latitudes and longitudes for each alternative. Do you need additional information other than potential construction impacts? The points depict the end of abutments for signals and the center of the bridges. Center latitudes and longitudes for the Sunny Point alternatives are located where they diverge from each other. Keller	Advisory Committee Comment

6/26/2023	Sean Kveum Chief Operating Officer Alaska Seaplanes	Hi Nina, I have. I'm waiting to hear back from the engineer who's building some of our new RNP approaches. Are the depicted heights Above Ground Level or Mean Sea Level?? Thanks, Additional comment Hi Nina, After further review with our engineers, It doesn't appear that any of the proposed locations or lighting will have an effect on our RNP procedures.	Hi Sean, It's on NAVD88 datum, like the airport. Our engineer is not sure what the relationship is to MSL in Juneau. Would it help if I send you AutoCAD files? The table below was put together to help this effort. It provides the latitudes and longitudes for each alternative. Please let me know if you need additional information. The points depict the end of abutments for signals and the center of the bridges. Center latitudes and longitudes for the Sunny Point alternatives are located where they diverge from each other. Douglas(Abutment) Center(Bridge) Juneau(Abutment) Alternative Latitude Longitude Latitude Longitude Latitude Longitude Mendenhall 58.341228 -134.625350 58.332904 -134.616436 58.341218 -134.625183 Sunny Point West 58.344882 -134.534136 58.350145 -134.533684 58.357245 -134.537806 Sunny Point East 58.344882 -134.534136 58.350145 -134.533684 58.356259 -134.520245 Vanderbilt 58.336688 -134.509284 58.340726 -134.506010 58.344499 -134.502045 Twin Lakes 58.333005 -134.499416 58.335021 -134.495142 58.336958 -134.491005 Salmon Creek 58.323670 -134.479403 58.325005 -134.476924 58.326470 -134.474178 Datum for the above coordinates: NAD83 Stateplane 1, 2011 Thanks, Nina	6/26/2023	N. Keller	

6/29/2023	Ammie Parker	Hello, I'm concerned about a bridge being placed around my home (near salmon creek). I do not want my views to be degraded, have increased road noise, and increased hazardous traffic. All of these things will rob me of the simple pleasures of quiet scenery that were a deciding factor to purchase my home.	Good afternoon, Ms. Parker, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	6/30/2023	M. McCammon	

7/10/2023	Cody Hargreaves Sr. Principal Performance Based Navigation (PBN) Engineer Flight Operations – Engineering & Fleet Technology	Hello Cody, Following a discussion with JNU, the study team would like to gather some information from the different airlines and traffic control to get a better understanding of potential impacts. Attached is a figure showing the different locations of the alternatives and the estimated heights. It would be great if you could respond to the following questions to help us get a better understanding of potential impacts: 1. How do the proposed bridge locations affect existing and/or proposed RNP approaches? Please explain and rank from most impactful to least impactful. Proposed Bridge locations and heights do not affect current RNP approach designs, depending on the exact width and location of the western most side of the bridge (including any lighting added) a. Regarding proposed RNP approaches would the proposed bridge impact approach minimums or cause the RNP approach to be canceled? Proposed Bridge designs do not impact approach minima, however construction could have a serious impact at the Sunny Point location. A crane taller than 140' (70' above proposed bridge deck height) would significantly raise approach minima and a crane taller than 200' (130' above proposed bridge deck height would NA the procedure) Recommend against Sunny Point location due to construction concerns. At the other bridge locations cranes up to 350' have been evaluated with no impacts Ranked order is (preferred first):	Response to request for information sent to N. Keller Horne. No response.			Advisory Committee Comment

		1. Salmon Creek/Twin Lakes/Vanderbilt 2. Mendenhall 3. Sunny Point-East/West 2. Are there any proposed bridge locations that would affect a missed approach? Please rank most impactful to least impactful. No impacts to Rwy 8 missed approach 3. Are there any proposed bridge locations that would affect a one-engine-out? Please rank most impactful to least impactful. At the proposed locations & heights there is no impact to takeoff and payload. Construction cranes above 175' at the Sunny Point location would impact takeoff performance and payload, and effectively close the runway under certain conditions for air carrier ops. 4. Would it be possible to determine the maximum height of the bridge at the locations depicted in the graphic that would not impact existing or proposed RNP approaches? If so could you please provide the max heights of each location? Any obstruction (bridge/light/crane/etc) above 140' in the Sunny Point vicinity would cause impacts (with current information provided). At all other locations, we don't foresee any impacts. 5. There is a potential for the bridge to be lighted, would lighting affect existing or proposed approaches? Do you have any concerns with the bridge being lighted? Would shielding be a good mitigation effort? Shielded/downcast lights with red obstruction light on top per AC 70/7460-1 would be required. 6. We understand that the ATCT will have aircraft				

		hold off Spuhn Island, do any locations that are proposed cause concern for your airline? I think this may be more applicable to GA and/or 135 operators. I don't believe we typically hold in this location. FAA/ATC controls published/un-published holding.				
7/13/2023	Ducks Unlimited	Morgan received a call requesting information on where to submit comments and how long comments would be accepted. Morgan confirmed the project email address and shared that comments would be accepted throughout the PEL study process.	Phone conversation	7/13/2023	M. McCammon	

7/15/2023	Jason Custer, CMA, PMP CBJ Airport Board	Hello. I am newly appointed to the CBJ Airport Board, and am working to develop an understanding of the "Juneau Douglas North Crossing" project. Can you please provide the most recently completed benefit-cost analysis that is serving as the basis for the decision to pursue this project? I reviewed the documents available online, but did not see a BCA. Thank you, and best regards for a good weekend.	Good afternoon, Mr. Custer, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. DOT&PF has chosen the Planning and Environmental Linkages (PEL) process to identify and evaluate a purpose and need for a north crossing connecting Juneau with Douglas Island. As part of this analysis, the PEL process will also develop a cost-benefit analysis. It has not been completed yet and is scheduled for late in 2023 or early 2024. When this document is available, it will be shared on the project website. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Please let us know if you have any further questions. Best regards, Morgan McCammon	7/17/2023	M. McCammon	

7/17/2023	Jason Custer, CMA, PMP CBJ Airport Board	Ms. McCammon. Thank you for clarifying that a benefit-cost analysis is not complete, but will be forthcoming. What standard will be used for its preparation? Will it be the USDOT's "Benefit-Cost Analysis Guidance for Discretionary Grant Programs," or another standard? I am confused by your statement "I have shared your comments with the project team." I have not provided comments. Rather, I have asked to review the BCA, to help me form an opinion of the project. Please confirm that you have not mistaken this request for information as a statement or public comment from me, regarding the project. I have no comment at this time. Thank you.	Mr. Custer, Yes, the USDOT's "Benefit-Cost Analysis Guidance for Discretionary Grant Programs" is the guidance we use. In regards to the communication with the project team. Your question was treated as such and not a comment, but all communications become part of the study records. I wanted to let you know that I shared your question with the study team including the project manager to provide an answer to your question. The study team is accepting questions and comments throughout the study process, please let us know if you have comments or any other questions. We are happy to provide you with information. Thank you for interest, Morgan McCammon	7/18/2023	M. McCammon	

7/24/2023	Cliff Sato | Delta Air Lines - Technical Pilot Airspace and Procedures Fleet Integration | Line Operations	Good morning Nina, Thank you for your patience in our reply. Please let me know if the information below adequately answers your questions. 1. How do the proposed bridge locations affect existing and/or proposed RNP approaches? Please explain and rank from most impactful to least impactful. Delta will not be making changes to the path of our current special RNP procedure due to these bridge locations. This is subject to the exact width and location of the western most side of the bridge (including any lighting added) which has yet to be disclosed. a. Regarding proposed RNP approaches would the proposed bridge impact approach minimums or cause the RNP approach to be canceled? Proposed Bridge designs do not impact approach minima, however construction could have a serious impact at the Sunny Point location. A crane taller than 140' (70' above proposed bridge deck height) would significantly raise approach minima and a crane taller than 200' (130' above proposed bridge deck height would NA the procedure) We do not believe Sunny Point is a viable option due to the certain impacts construction would have on access to the airport. The remaining bridge locations have been evaluated with cranes up to 350' with no impacts. Ranked order is (preferred first): 1. Salmon Creek/Twin Lakes/Vanderbilt 2. Mendenhall 3. Sunny Point-East/West 2. Are there any proposed bridge locations that would affect a missed approach? Please rank	Response to request for information sent to N. Keller Horne. No response.			Advisory Committee Comment

		most impactful to least impactful. We've evaluated there to be no impacts to the missed approach. 3. Are there any proposed bridge locations that would affect a one-engine-out? Please rank most impactful to least impactful. There are no engine out impacts. At the proposed locations & heights there is no impact to takeoff and payload. Construction cranes above 175' at the Sunny Point location would impact takeoff performance and payload, and effectively close the runway under certain conditions for air carrier ops. 4. Would it be possible to determine the maximum height of the bridge at the locations depicted in the graphic that would not impact existing or proposed RNP approaches? If so could you please provide the max heights of each location? Any obstruction (bridge/light/crane/etc) above 140' in the Sunny Point vicinity would cause impacts (with current information provided). At all other locations, we don't foresee any impacts. 5. There is a potential for the bridge to be lighted, would lighting affect existing or proposed approaches? Do you have any concerns with the bridge being lighted? Would shielding be a good mitigation effort? Shielded/downcast lights with red obstruction light on top per AC 70/7460-1 would be required. 6. We understand that the ATCT will have aircraft hold off Spuhn Island, do any locations that are proposed cause concern for your airline? No.			

7/24/2023	Patty Wahto Airport Manager Juneau International Airport	Thank you Cliff. Nina, As noted, this is as it stands with current/existing RNP approaches. As you know, JNU is programmed to extended the RW 26 MALSR approach lighting an additional 1600 ft. to the east pending FFY23 FAA reauthorization language. JNU has permits in-hand for this work. I believe it prudent to assess for the extended MALSR and RNP approaches prior to moving this project forward. Thank you.	Hi Patty, Thanks for reaching out. Our design team is aware of the proposed MALSR's and we consider any alternative that conflicts with the MALSR's to be fatally flawed. We will make sure that our concepts are not in conflict with the MALSR's. Right now we are more than 250' beyond the limits of the proposed MALSR's and will evaluate refinements to the Sunny Point alternatives to increase that distance. The Sunny Point alternatives will also be designed to stay under the future 50/1 approach. Thank you, Nina	7/25/2023	N. Keller	Advisory Committee Comment
7/25/2023	Patty Wahto Airport Manager Juneau International Airport	Thanks, Nina. This will also change the approaches and likely lower mins for AS and DL proprietary procedures. There is also a containment area for protecting these approaches. I can't speak for either airline but that will have to be considered, not just the current conditions for a published public approach/missed/departure.	Response to request for information sent to N. Keller Horne. No response.			Advisory Committee comment

7/31/2023	Sue Rodman Statewide Lands and Refuges Program Coordinator Division of Wildlife Conservation Alaska Department of Fish & Game	Good afternoon Marie, Within ADF&G, I took the coordinator position for our statewide refuges after my predecessor retired in May. My colleagues Tom Schumacher and Roy Churchwell in Juneau are the primary contacts and on-site managers of the Mendenhall Wetlands State Game Refuge, along with Ryan Scott, Director of the Division of Wildlife Conservation. We have been considering the proposals submitted for the Juneau-Douglas Second Crossing relative to impacts on the Mendenhall Wetlands SGR and the activities we support there. I see that the summer 2023 meeting is not scheduled on the web page. What is the current status of the proposals? How can we most effectively weigh into the process? Thank you for any updates. I hope to visit with you and learn more about how we can support the Second Crossing and retain the values of the Mendenhall Wetlands SGR.	Good Morning Sue, Thanks for your patience as I'm returning from leave and catching up. The summer 2023 meeting has been delayed – we hope to schedule committee meetings soon to provide updates. We are currently working through Level 2 Screening of the alternatives shown on the map below. In addition to a status update meeting, there will be meetings scheduled with the Stakeholder and Technical Advisory Committees when we have draft results from Level 2 Screening. This opportunity occurs before we share with the general public and before we develop final recommendations, so it is a great time to weigh in on our analysis and provide feedback. Thanks,	8/7/2023	M. Heidemann	Advisory Committee comment

8/23/2023	Barb Mecum	Hi Morgan, A quick update for you, we are now at 117 signers on our petition and growing. We are concerned the Mendenhall Peninsula location was added back after being removed once. From what we know, that was based on a comment from an Advisory Committee member, Dave Hannah, asking that it be added back into the PEL Study. Since he is the owner of Alaska Concrete Co., it seems to be a conflict of interest. Can you help us understand the basis for adding the Mendenhall Peninsula location back into the study after being eliminated once by the DOWL screening process. Would also appreciate an update on the process timeline since we are all hearing the PEL Study is on hold while DOT conducts more research. Not sure what that means. We understand they also have a new project manager. Thank you,	Good afternoon, Barb, Thank you for sharing the update on the petition. I hope you saw the Summer Newsletter update, attached. The Mendenhall Peninsula alternative was added back into the screening process because the rational for removing it in the draft was deemed insufficient. It was not added back in based on the input of a single individual or entity. The primary reason to screen it out in the draft screening presented at the Advisory Committee meeting was that it initially seemed to fall short of meeting the project purpose and need in regards to emergency response and travel times. After further consideration and Advisory Committee member response to the draft screening, the team made the decision that further evaluation and screening is necessary to make a final determination on this alternative. We look forward to your continued participation in this process. Best regards, Morgan McCammon	8/29/2023	M. McCammon	Advisory Committee comment
8/29/2023	Matt Little Director of DU Public Policy, Western Region	Thank you for the opportunity to comment on the Juneau Douglas North Crossing PEL Study. Please confirm receipt. Sincerely, Matt See letter dated 8/29/2023	Good morning, Matt, Thank you for providing these comments. Morgan McCammon	8/29/2023	M. McCammon	Advisory Committee comment
8/29/2023	Thomas Polatty	I suppose the plan is to put a new mine on Douglas island	Profanity in the email subject. Project Manager requested no response.			

8/30/2023	Linda Baker	One of the main reasons for a 2nd crossing is in case the main bridge is inoperative for a period of time. Many of the people who work in Juneau live in Douglas plus kids who attend high and middle schools. It makes no sense to have their alternative access as far away as the Mendenhall Peninsula. A second crossing at Vanderbilt Hill provides a good alternative plus it would cut many miles off the trip to Eaglecrest. it would also be one of the least damaging to the environment and one of the most economical. Sincerely,	Good morning, Ms. Baker, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	8/31/2023	M. McCammon	

8/30/2023	Bruce Baker	August 30, 2023 To: DOWL Group & Alaska DOT&PF For the following reasons, the Mendenhall Peninsula second channel crossing option should be eliminated as soon as possible from further consideration in the PEL screening process: First, it would not significantly reduce congestion during peak traffic periods on the existing bridge. Second, it would be the longest and most expensive second crossing alternative, requiring a very costly bridge across Fritz Cove and a new road down the Mendenhall Peninsula. Third, it would not reduce travel time for medical and other first responders, and would create the longest route to the hospital if the existing bridge were closed. Douglas Island residents' work, shopping, and school bus travel times would be extraordinarily long if the existing bridge were to become unusable for any length of time. Fourth, it would have a significant negative impact on Fritz Cove whales, sea lions, seals, other marine life, as well as on the biologically productive nearby Fish Creek estuary. Finally, no one has provided the results of a rigorous and economically defensible cost-benefit analysis which clearly demonstrate that a Mendenhall Peninsula crossing is justified to satisfy what some consider to be economic development opportunities on the west side of Douglas Island. Juneau's population is not increasing, many government offices are moving to Southcentral Alaska, and the vision some people have for west side Douglas Island development is more wishful thinking than a defensible reason for an extremely costly Mendenhall Peninsula crossing.	See below			

		The upshot is that the Mendenhall Peninsula alternative should be eliminated as soon as possible from the PEL screening process.				

8/30/2023	Bruce Baker	August 30, 2023 To: DOWL Group & Alaska DOT&PF For the following reasons, the Mendenhall Peninsula second channel crossing option should be eliminated as soon as possible from further consideration in the PEL screening process: First, it would not significantly reduce congestion during peak traffic periods on the existing bridge. 8/31/2023	Richard Stern	Hi, I reside in North Douglas. We need tunnels, not bridges! With the help of our federal legislators, Alaska needs federal funding to build this infrastructure. SE Alaska needs roadway connection from Juneau to Alaska, bypassing travel through Canada.. This needs to be paid for by the federal govt, and be part	Good morning, Mr. Stern, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards,	9/5/2023	M. McCammon	

		of the Federal Highway System. America built the Alaska highway through Canada! Thanks for reading	Morgan McCammon			
8/31/2023	Lisa Phu	Hi Steve, Thank you for talking briefly on the phone yesterday morning regarding the "Juneau Douglas North Crossing PEL Study: field study activities" letter we received. We do not consent re: right of entry for DOT&PF staff and contracted professionals to conduct fieldwork on our property, which may include the excavation of one or more soil pits. Thanks again,	Response to phone conversation.			

9/5/2023	Richard Stern	Morgan, Thanks, The purple tunnel is the best, and needs federal funding in the entirety. It need not be a burden on the city or state. The Daklton Hwy is maintained by the state, Its a fortune to maintain. Please place the burden of cost on Federal Hwy funds, No bond! What is being done to fund this? What is the cost to place a tunnel vs a bridge. The BART from Oaklan to SF is set on water, not tunneled, so that is the plan? What Other than being unsightly, what is the damage to marine life & how is this going to affect fisheries. Where does fish & game stand on the issue? What is the environmental impact?	Good morning, Richard, Thank you for the additional comments. This PEL study is funded primarily with federal funds through a partnership between the Alaska Department of Transportation and Public Facilities and the City and Borough of Juneau. Outcomes of the PEL study will include a benefit-cost analysis and funding strategy for a potential future project. On average, tunnels cost significantly more than bridge structures, which is one reason why the tunnel alternative, North Airport, was eliminated. The remaining alternatives are undergoing preliminary engineering to evaluate structure considerations, potential environmental impacts, mitigation strategies, and cost estimates. As Gastineau Channel and Fritz Cove are designated navigable waterways, structures being considered are elevated to approximately the height of the existing Douglas Island bridge or higher. The Alaska Department of Fish and Game has representatives on the Technical Advisory Committee and has been involved since the beginning of the PEL study. They have provided extensive input on the Mendenhall Wetlands State Game Refuge and public access, viewshed considerations, wildlife and fish habitat, and strategies to mitigate potential impacts. The Origin Destination Data Memo and Bridge Volume Forecast Memo are available on the website Documents page: https://www.jdnorthcrossing.com//documents.html. These memos provide information on forecasted traffic volumes for each alternative.	9/12/2023	M. McCammon	

			These forecasts were used as a part of Level 1 Screening and will continue to be used to inform Level 2 Screening. Please let us know if you have any additional comments or questions. Morgan McCammon			

9/7/2023	Ron Somerville, MWSG	Morgan, our group met recently to review the progress to-date on the second crossing. We decided to send the attached letter to express some of our continued concerns and to emphasize major issues still dangling. Hopefully, some of these issues and concerns can be openly discussed and resolved rather than waiting for major conflicts to develop throughout the EIS process. We really feel that there are some win-win opportunities available that do not jeopardize critical wetlands now being the clear favorite of the Dowl team. Thanks for your time. Dear Morgan, I read in your recent newsletter that DOWL has initiated further environmental analysis to inform the findings of the Level 2 PEL study. The studies were to begin August 30 and end this fall. I have also learned that there may be an Advisory team meeting on September 13. As a member of the Mendenhall Wetlands Study Group, I had not been notified of the meeting. If there is a meeting on September 13, please let me know what is on the agenda. These new developments in the PEL Level 2 analysis raise several questions that should be on the agenda for the next meeting. First, was the scope and study design for the four areas of investigation listed in the newsletter reviewed by the Refuge Manager? The study scope and design were not sent to the Mendenhall Wetlands Study Group even though our group	Good morning, Ron, I apologize for you not receiving the invitation to the next Advisory Committee meeting. I have attached the invitation to this email, and I hope you are able to attend. I am consulting with the PEL study's environmental team to review your concerns. Thank you for sharing these. Best regards, Additional response in Level 2 screening	9/8/2023	M. McCammon	Advisory committee comment - Meeting 4

		includes scientists who have either done, or are very familiar with, topics you are planning to investigate. Do you plan to request input from the MW Study Group? And have you incorporated findings of the many existing studies included in the bibliography of the study recommendations we sent to you on January 30, 2023? Second, it appears your studies will be limited to the footprint of the proposed corridors. If so, they are flawed from the start as each crossing will have greater or lesser impacts on habitats, species and human uses beyond the footprint of the crossing structure. The studies of wetland vegetation and function and wildlife surveys should include the entire wetland area. Third, all of the crossing options are perpendicular to the tidal flow that creates and nourishes the habitats and species in the wetlands. And all of the crossings have potential to impact freshwater flows into the wetlands. Hydrology of the wetlands should be a focus of the studies. Impacts of crossing structures on tidal and freshwater flows will be a major concern when evaluating the different alternatives. Fourth, a fall study of upland and migratory bird use of the wetlands is too narrow a time window to give a full understanding of the use of the wetlands by migratory and resident birds. Again, our January 30, 2023 comments give you available studies documenting the year-round bird use of the wetlands. Have you consulted those in the PEL analysis and in designing your upcoming bird studies? Finally, as we suggested in our January 30, 2023				

		recommendations, and our March 17, 2023 comments on the PEL Level One report, none of the alternatives that cross the Mendenhall Wetlands State Game Refuge should include a solid fill option. Given the large and unavoidable impacts of a solid fill structure to the hydrology of the wetlands we recommended that only elevated structures be evaluated in the PEL Level Two analysis. Are you still planning to include solid fill structures as options for crossing the State Game Refuge? These are the primary issues we think need to be discussed at the next session. Sincerely, Ron Somerville Mendenhall Wetlands Study Group				
9/7/2023	Richard Stern	Hi morgan, What is the projected estimated roadway traffic for the bridge. What is the estimated cost of the bridge vs the cost of a tunnel. Where is funding coming from? I read that the Biden admin cancelled all the leases, except for Conoco leaase. This action hurts us all financially	See above, response dated 9/12/2023	9/12/2023	M. McCammon	

9/8/2023	Lisa Phu	Hi Steve, Happy Friday! I understand there will be a Stakeholder meeting on Sept 13 for the Juneau Douglas North Crossing project. Can you please along the time of that meeting and the Zoom link? As a property owner impacted by one of the study alternatives, I would like to stay informed. Thank you,	Hi Lisa, Steve Noble passed along your request for information on the Advisory Committee. Committee members include representatives from a wide variety of organizations: government and regulatory agencies, local government, tribal government and organizations, community groups, environmental organizations, recreation groups, business organizations, and neighborhood associations. These committee meetings are not open to the public; however, the study team will be hosting a public meeting in early 2024. The study team sends periodic newsletters to update community members and share updates on the study progress, latest version attached. I have added you to the project update email list. We also encourage you to visit the website at www.JDNorthCrossing.com for the latest information. The study team welcomes concerns, questions, and comments from everyone throughout the process. Best regards, Additional response Hi Lisa, I apologize for the second email. I wanted to share that I believe you are in the North Douglas Neighborhood Association area, which has an active committee on this PEL study. Please reach out to Ellen Furguson, fernleafgt@yahoo.com, for additional involvement. If I am incorrect on the neighborhood where you live, please see the	9/8/2023	M. McCammon	

			attached list with all the neighborhood associations in the City and Borough of Juneau. Best regards, Morgan McCammon			

9/12/2023	Mike Stanley, Chair NDNA Second Crossing Committee	Morgan, Thank you for the notice regarding the Zoom meeting tomorrow. I plan to attend on behalf of the North Douglas Neighborhood Association, Second Crossing Committee. I will be using the computer at our house, for which my wife, Natalee Rothaus, is the system administrator and whose name appears in Zoom boxes. But it will be me on the line, so I would appreciate it if the minutes of the meeting could list me as a participant, not her. This is a small point, but I want the record to accurately reflect that I attended on behalf of NDNA. Thank you, and please let me know if you have any questions about this. Additional Comment I'll try your suggestion, despite my lack of tech savvy, but will use Chat if I can't make it work. Thanks for responding.	Hi Mike, Thank you for letting us know. When the meeting starts tomorrow, you can change your name on the display for this meeting, so all participants know you are attending as the NDNA representative. This will be one of the slides in the presentation, as we would like everyone to identify themselves and the organization they are representing. If you need assistance, please email me or use the Chat in Zoom. We look forward to talking with you tomorrow. Morgan McCammon	9/12/2023	M. McCammon	Advisory Committee Meeting

9/12/2023	Amy Rodman	Greg, Good morning. Thanks for your time on the phone regarding this Address redacted property and the environmental work for the second Douglas bridge. This property is owned by my parents and I provided their consent via email to Mr. Noble, so my written (email) consent may or may not legally hold water. If and when environmental fieldwork happens, please call so I can direct the scientists to not dig in the leachfield. Let me know if there are any questions. Thanks again for your time. Take care, Amy Subject: North Douglas bridge field study activities, re: Address redacted property Steve, Good evening. I'm responding with consent to the August 18th letter referencing the fieldwork scheduled for various North Douglas properties at potential crossing sites. I'm renting at my parents' property and will consent for them, since they snowbird to southern California for most of the year. I'm requesting a phone call prior to any "Entry upon land" onto my property for walking around and possible digging for scientific data gathering purposes. There has been an uptick of presence of vagrants in Juneau over the last two years, along with property theft occurrences. Since I work from home and am alone on this property, I'd like to	Phone conversation follow up	9/12/2023	G. Lockwood	

		know who is walking around my house and when. Also, I know everyone would prefer digging or evaluation be done away from the property's septic tank and leach field. Please pass on my cell phone number to any DOT or DOWL field staff: Phone number redacted Thanks for your time.				

9/12/2023	Richard Stern	thanks Morgan Who is it that rules out a tunnel? When large cities build tunnels there is no problem getting federal funds, as the Hudson tunnel in NYC to NJ will cost significant amount more than Juneau's plan. This is something Alaska DOT needs to press our federal legislatures to promote, stand behind and not waiver from. We can admit the federal legislators are not of the caliber of Ted Stevens, they need to step it up. Additionally, there needs to be build a Juneau-Skagway road-Haines, opening the SE. Fact is Alaska need not rely on Canada for roadwork. Further a bridge to Elfin Cove & Gustavus needs planning & building. When nations build long bridges ie Tokyo to Narita, or even Ponchartrain bridge the Army Corp of Engineers had no problem spending money or Key West or Chesapeake bridge, Lets not forget the Bid Dig in Boston. Alaska needs its place on the map.	Hi Richard, Your comments have been shared with the project team. Thank you, Morgan McCammon	9/13/2023	M. McCammon	
9/15/2023	Mike Stanley, NDNA	Steve, Further to our phone call, it would assist me to rough out a sketch of the idea I floated at the end of the PEL stakeholder advisory committee meeting on Wednesday, regarding a crossing at the Salmon Creek intersection, if I had an aerial drawing or photograph of the intersection that I could mark up. You said that your staff should be able to locate something along these lines, which they could send. If what they find is larger than can reasonably be made into a pdf and e-mailed, I would be happy to stop by DOWL's office in the valley to pick it up. There's no hurry on my part; I'll be out-of-town Sept. 18-25, and likely would not be	Good afternoon, Mike, Steve requested that I follow up with you regarding an aerial of the intersection for you to mark up. We appreciate your time in developing this idea. Please let me know if you would like to arrange to pick up printed copies. Best regards, Morgan McCammon	9/29/2023	M. McCammon	Advisory committee comment - Meeting 4

		able to work on this until sometime in early October. Thank you, and feel free to call me if you have any questions about this. My mobile # is [redacted].				

9/15/2023	Ron Somerville	Dear Morgan, The Mendenhall Wetlands Study Group requests copies of study plans prepared in order to carry out the wetland and wildlife resource inventories to be conducted for the various North Crossing route alternatives. This request is in relation to the deadline you have set for comments on said plans, which is now three days away, on Monday, September 18th. In order for the MWSG to make substantive comments it is necessary for us to be provided with more detail than the PowerPoint overview given at the recent September 13 meeting. Presumably, when a Technical Advisory Committee was named for this PEL study it was for the purpose of getting advice from people with competence in subject areas pertinent to the North Crossing project proposal. When the decision was made to abandon the original Level 2 screening process schedule in order to conduct environmental surveys it was an excellent opportunity to seek such input. Instead, we are forced into a compressed timeline and as a TAC member have not been provided with the documents we are asked to comment on. For the sake of a fair process and a defensible result to the PEL study we ask that you provide the study plan(s) for our information and review. If the detailed plans cannot be made available immediately, we would request at least a 2 week extension for the comment period. Thank you for your consideration.	Good morning, Ron, Frank and Alex, Thank you for your patience and continued involvement in this process. Please see the attached documents: • Responses to the questions in your letter dated September 6, 2023 • Bird Survey Work Plan • Eelgrass Survey Work Plan • Intertidal Habitat Work Plan • Wetlands Work Plan Please send any comments as soon as possible. We appreciate your input. Morgan McCammon	9/18/2023	M. McCammon	Advisory committee comment - Meeting 4

		On behalf of the Mendenhall Wetlands Study Group -				

9/18/2023	Matt Little Director of DU Public Policy, Western Region	HI Morgan, can you please add DU's Conservation Planning Director Mark Petrie to this email list and fwd him this notice? mpetrie@ducks.org Mark is our lead for scientific review and comments on this project. Thank you,	Hi Matt, I will add him. Thank you, Morgan McCammon Additional Response Good afternoon, Mark, Matt Little requested I forward these documents. Please coordinate Ducks Unlimited comments. Thank you,	9/18/2023	M. McCammon	Advisory Committee
9/18/2023	Patty Wahto Airport Manager Juneau International Airport	Good morning. Could we get a compilation of the comments sent to DOWL/State on the north douglas second crossing alternative sites, please? Including what JNU Airport (I) sent in on-line. Thank you.	Yes Patty We'll get on it. Steve	9/18/2023	S. Noble	Advisory Committee Comment

9/18/2023	Catherine Pohl	Hello Christy, Thanks for the update. We understand the city has contracted for a large aerial photography (and also a lidar) project for the Juneau area but it is not clear when that will be available-- maybe this winter for the photos. Has other recent photography been procured for the project area?	Hi Catherine, I checked with our project team and we aren't aware of any updated LiDar imagery being made available in the near future. The surveys being conducted this fall include: • Migratory Bird Survey and Upland Bird Habitat Mapping • Eelgrass Survey • Intertidal Habitat Mapping • Wetlands Delineation and Functional Assessment The satellite imagery you asked about is ESRI world imagery from 2021. It is publicly available on ArcGIS: https://www.arcgis.com/apps/mapviewer/index.html?layers=10df2279f9684e4a9f6a7f08febac2a9 I hope this helps!	9/18/2023	C. Gentemann	
9/18/2023	Catherine Pohl	Are you saying the project partners aren't using anything other than imagery (you mean aerial photography rather than satellite?) from 2021? What we see from 2021 does not show the lower intertidal and is low resolution, low accuracy. You are saying no one has flown the project area for updated imagery? Additional Comment It is very obvious even just using the NWI web mapper -- on which you can control transparency of NWI overlay over fairly recent imagery-- that the 1979 NWI map is not at all close to accurate for mapping vegetated tidal areas and that re-mapping of the entire wetlands is needed to put impacts in context as well as efficiently map habitats and wetlands directly affected by the crossing sites. Fieldwork is not needed to determine this.	Hi Catherine, Thank you for the comment. We have a team of scientists heading out soon to collect updated intertidal and wetlands mapping. The project team is going to determine the need for any future imagery using this information.	9/18/2023	C. Gentemann	

9/18/2023	Art Dunn	First, the "comment" button on the project home page appears to not work ... This comment is to remind the project team that use of the Mendenhall Wetlands State Game Refuge will require a "4(f)" determination. I will caution the team to read carefully the refuge purpose and note that one of the primary purposes of the refuge is to provide waterfowl hunting opportunity. Any loss of hunting opportunity must be considered and mitigated as prescribed by 49 USC Sec 303 and 23 USC Sec 138. As a long-time waterfowl hunter on the MWSGR, and a person who has an extensive knowledge of Sec. 4(f) determinations, I will be paying special attention to the 4(f) determination for this project.	Good afternoon, Mr. Dunn, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. The “Comment” button on the website open the study email address, JDNorthCrossing@dowl.com, in your email program. Please try refreshing your browser if this button is not working for you. Please let us know if these do not work for you. Best regards, Morgan McCammon	9/19/2023	M. McCammon	
9/18/2023	Scott Jouppi	The wet lands in and around Juneau have been and continue to be destroyed by development. People that bought land on North Douglas knew going n there was a commute to get to and from town. If the current Juneau Douglas bridge needs improvement then fix it.	Good afternoon, Mr. Jouppi, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	9/19/2023	M. McCammon	
9/19/2023	Catherine Pohl	It is very obvious even just using the NWI web mapper -- on which you can control transparency of NWI overlay over fairly recent imagery-- that the 1979 NWI map is not at all close to accurate for mapping vegetated tidal areas and that re-mapping of the entire wetlands is needed to put impacts in context as well as efficiently map habitats and	Hi Catherine, Thank you for this additional comment. I have shared it with the project team to include as part of the project file and comments received.	9/19/2023	C. Gentemann	

		wetlands directly affected by the crossing sites. Fieldwork is not needed to determine this.	Christy Additional response in Level 2 screening			
9/19/2023	Catherine Pohl	OK, if you include your comment that I was responding to, otherwise it sounds like I am saying no fieldwork is needed to assess impacts. I am saying that you don't need fieldwork to know that using a 1979 NWI map is not adequate for planning efficient fieldwork and to know that new imagery and remapping are both needed, even to efficiently plan and conduct fieldwork. Why ground-truth an invalid layer? Additional comment Hi Christy, My partners and I did that mapping. There were only a few tidal units mapped in that project, so not most of the refuge, which is just NWI unless some other project mapped it. Mostly it was freshwater wetlands on city land in "priority areas" designated by the CBJ. Anyway, it is good they are using it now for Mendenhall Peninsula and the bench road and Hendrickson Pt areas, some near Fish, etc., where there is now some better mapping, but the rest would just be NWI I would think. For the refuge, they should be remapping from recent aerials or using the SealTrust 2004 habitat map (though it needs updating too) as a preliminary or updating that. What function and value assessment method are they using. The plan doesn't say. WESPAK SE?	Hi Catherine, I wanted to share with you that the project team let me know the wetlands mapping being used to assess impacts relies more on the 2016 Juneau Wetlands Management Plan mapping than NWI. Christy Additional response in Level 2 screening	9/19/2023	C. Gentemann	

9/19/2023	Sadie McKenry	Hi! I am curious where the proposed new road would originate from for the crossing at Mendenhall Peninsula. Is it next to Wilma Dr? Or perhaps I can just get some directions to the correct overview map with street names on it? Thank you!	Good morning, Ms. McKenry, Thank you for your questions. At this point in the process, the study team is evaluating alternatives, shown on the project website: Probable Limits of Alternatives_2023_0804.pdf (jdnorthcrossing.com). The study team does not know what specific streets/intersections might be impacted and will not likely know with certainty until later in the PEL Study phase when recommended alternatives are identified to move forward into an environmental documentation process. We have identified general areas where the alternatives interface with Douglas Island and Juneau, but these are not intended to denote impacts to specific properties or streets since we are still in the planning process. The study team is trying to use City and Borough of Juneau (CBJ) owned parcels rather than privately owned property where possible. The best information is located on the website, www.jdnorthcrossing.com. We encourage you to stay involved – when more specific details are known, we will share these with the public through the website and at the final public meeting in late winter/early spring 2024. Best regards, Morgan McCammon	9/25/2023	M. McCammon	
9/19/2023	Alex Ditcharo	Any option is better than the engineer cutoff crossing. I feel that way and literally every single person I've spoken to feels that way. - it's too far out of the way - it goes through a quiet neighborhood - it's through deep water - engineers cutoff would have to be completely redone and widened - probably the most expensive option	Good morning, Alex, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards,	9/26/2023	M. McCammon	

		I can't believe that this option is even up for debate.... lol	Morgan McCammon			
9/20/2023	Winston Smith, Juneau Audubon Society	Morgan: Thank you for the email and attached documents. My response today is on behalf of the Juneau Audubon Society. As an experienced wildlife scientist who conducted field ecological research on birds and other wildlife for over 40 years, I am well aware of variability that exists and occurs seasonally and annually. The proposed fieldwork related to the second crossing are woefully inadequate and will simply provide a single, seasonal observation point without appropriate context or other necessary information regarding variety, abundance, frequency, or duration of use by birds and other wildlife species. At a minimum, fieldwork needs to be conducted throughout the year for multiple years, to be determined in part on the variation observed between the initial two years of the study. SIncerely,	Good morning, Winston, Thank you for providing comments, these have been shared with the study team. Additional response in Level 2 screening	9/25/2023	M. McCammon	Advisory committee comment - Meeting 4

9/20/2023	Patty Wahto Airport Manager Juneau International Airport	So I went through briefly to look for a few comments. Could you share the Delta and Alaska letters with me (I believe they were sent in the past couple months). Also I put our airport comments on the website, as instructed, and do not see that on the summary. These look like they are just the emails, not the comments from the website. My latest comment was sent in May/June timeframe. Thank you.	Good morning, Patty, We have combed through all the comments we have and have not found the letter you reference. One concern I have is where it may have been submitted. You reference an "online portal." The comment button on the study website, www.jdnorthcrossing.com, should open your email program with the study email address, jdnorthcrossing@dowl.com. I apologized that we did not receive the letter and hope you are able to resend it. Please send any further comments directly to this team or to the study email address, which is a distribution list received by the entire study team and includes the team members in this email. Thank you, Morgan McCammon	9/29/2023	M. McCammon	Advisory Committee Comment
9/21/2023	Laurie Craig	Hello, Morgan, I would like to request a copy of the comments submitted by the Juneau International Airport to DOWL about the Second Crossing. Thank you.	See response 9/25/2023			

9/22/2023	Alex Wertheimer, Mendenhall Wetlands Study Group	Dear Morgan: At the September 13, 2023, meeting DOWL held with the Technical Advisory Committee (TAC), we were informed that DOWL had formulated and was implementing Work Plans to evaluate the impacts of the various alternatives in relation to birds, eel grass, intertidal habitat, and wetlands habitat. We were told we had until September 18 to comment on theWork Plans. However, we did not receive copies of the Work Plans until September 18, the stated due date for comments and revisions. This is not an appropriate way to communicate with an Advisory Committee that is supposed to provide constructive input to the analysis and evaluation of second crossing options. As a result, the Mendenhall Wetlands Study Group (MWSG) is relegated to being critics of the plans rather than contributing to improved methodology and data collection. It is obviously too late for detailed comments of field methodology. However, despite the very limited time you have provided, the MWSG has read through the Work Plans and we have some general comments on the on-going field work. Study area(s): All of the studies contained in the work plans focus on only the footprint of the various alternatives and a small additional buffer either side of the alignments. This is undoubtedly a cost saving measure, but has the substantial flaw of ignoring the rest of the wetland area in which the alternatives sit and makes it impossible to evaluate route alternatives in the context of surrounding ecological values. A single narrow transect is likely to underestimate the values of a larger area - that's why sampling procedures require multiple transects or other sampling schemes to accurately depict the values exhibited by a larger piece of	Good morning, Alex, Matt, Ron, and Frank, Thank you for providing comments, these have been shared with the study team. Additional response in Level 2 screening	9/25/2023	M. McCammon	Advisory committee comment - Meeting 4

habitat. All of the alternatives are perpendicular to the tidal flow that creates and nourishes the habitats and species in the wetlands, and all of the crossings have potential to impact freshwater flows into the wetlands. Hydrology of the wetlands should be a focus of the studies, not an issue to be considered later. Impacts of crossing structures on tidal and freshwater flows will be a major concern when evaluating the different alternatives, and when evaluating the construction options for each particular alternative.

Timing: Evidence shows that most southward migration of birds through the Mendenhall Wetlands have occurred by mid-September, so a one-time survey late in the month has little value for depicting use of the Mendenhall Wetlands by bird species. Such studies should be conducted across one or more entire years, and should encompass the entire Mendenhall Wetlands rather than only individual route alternative transects.

References: It is essential that PEL's studies incorporate all available knowledge of the study areas, and that the most recent information be included. Two critical references in regard to bird use of the refuge that are not cited are:

Cain, S., J. Hodges, and E. Robinson-Wilson. 1988. Bird Use of the Mendenhall Wetlands in Juneau, Alaska. USFWS, Juneau, AK. 72 pp.
Armstrong, R.H., R.L. Carstensen and M.F. Willson. 2004. Hotspots: Bird Survey of Mendenhall Wetlands, April 2002 to May 2003. Juneau Audubon Society and Taku Conservation Society. 74 pp.

		The MWSG previously submitted these and a number of other references to the PEL process on January 30, so they should be readily available to your contractors. We look forward to seeing the results of the field work. We ask that the TAC be provided draft copies of the Work Plan reports with sufficient time to meaningfully comment on the analysis and interpretation. On behalf of the MWSG-				

9/24/2023	Laurie Craig	I'm following up on my request from Friday asking for a copy of the comments submitted to you by the Juneau International Airport on the proposed Second Crossing. I would appreciate receiving this document by noon Monday so I can share it with fellow members of the Mendenhall Wetlands State Game Refuge Citizens' Advisory Committee. The committee meets at 2:30pm on Monday, September 25. The Second Crossing has been a topic of interest to our group. We advise the Department of Fish and Game on Refuge issues. Best regards,	Good afternoon, Laurie, We will not be able to collect and share all comments submitted by the airport before your meeting today. We will share these with you as soon as possible. Thank you, Morgan McCammon	9/25/2023	M. McCammon	

9/26/2023	Julian Hausman	I am strongly opposed to the Mendenhall Peninsula alternative crossing of the Juneau Douglas North Crossing Bridge Proposals. Please don't build this. My wife and I purchased our home in 2022 to raise our family in the quiet serene Mendenhall peninsula and we plan to stay here for decades. To say this quite literally, I do not want a new highway and 100ft high bridge in my backyard. As a property owner on the tip of the Mendenhall peninsula within the study area boundaries, I am also quite concerned with the substantial increase in traffic (and construction) noise that such a crossing would introduce. The Mendenhall Peninsula crossing route would also do extreme harm to a large protected area of forest and its animal inhabitants, a place that I walk every day with my family. In addition to the wetlands impact study, have any of the environmental impact evaluations considered the marine life in Fritz Cove? The bridge would cut directly through habitats and migration routes used by salmon, humpback whales, orca, porpoise, seal, otter, crab, and many more. These animals are all an important part of the Juneau cultural identity, and they hang around around the Mendenhall peninsula and Fritz Cove throughout the year. Directly commenting on the negatives of this proposal from the Level 1 Screening Memo: • Significant earthworks will be required (cuts/fills exceeding 60 feet in height) to achieve a design standard for the profile grade of six percent. This has the potential for adverse impacts on residential roads and neighborhoods, and adverse	Good afternoon, Julian, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. The Origin Destination Data Memo and Bridge Volume Forecast Memo are available on the website Documents page: https://www.jdnorthcrossing.com//documents.html. These memos provide information on forecasted traffic volumes for each alternative. These forecasts were used as a part of Level 1 Screening and will continue to be used to inform Level 2 Screening. Additionally, Baseline Data Maps and Technical Memoranda can be found on the Documents page of the website. We expect the third and final open house to occur in late winter or early spring 2024. We will share information on the date, time, and location when determined. Please let us know if you have any additional comments or questions. Best regards, Morgan McCammon	9/27/2023	M. McCammon	

		visual impacts associated with the construction of a road at the top or, or part-way up a ridge. I agree that this would adversely impact my neighborhood and its visual aesthetics. • Under the likely best fit of the road alignment that matches the terrain of the peninsula, the bridge would need to be at least 100 feet high (in the best-case scenario) as would be required to meet clearance requirements, depth of the structural section, and the most likely profile grades of the highway. Although this is feasible from an engineering standpoint, additional analysis is needed to determine if it is reasonable. A bridge 100ft high or taller would SEVERELY alter the visual, cultural, and scenic identity of Juneau. The existing Juneau Douglas bridge is 66ft tall, so this new bridge would be at least 50% taller. Yuck. • The resulting structure would be nearly double the length of the next longest structure being evaluated, significantly increasing cost. Yes please keep the cost of this project as low as possible. And please don't destroy the Mendenhall peninsula forest! If such a crossing from Mendenhall peninsula to North Douglas were to be established, it would not greatly improve the use of non-motorized vehicles nor reduce energy consuming transportation. This crossing is often exposed to intense wind and weather that would make it challenging to walk or bike throughout the year. Also the two areas that are connected by this crossing are not areas dense with businesses or residences, so it is likely there will still be a need for energy consuming transportation to utilize this route. Can you quantify the congestion problem during peak hours on the JD Bridge that demands a fix?				

		I'm not convinced the problem is worth spending millions of dollars and years of construction to fix. As a regular user, I find that the congestion across the existing JD bridge during peak hours is trivial. Please keep me informed about when the next Open House discussion is scheduled as I would like to bring my objections forward. Thanks for your consideration,				

9/27/2023	Myrna Gardner, GWCCM, ICCM-F Xíeishxí -- Yéil -- Taakw.aaneidí Hi't Procurement Officer Central Council Tlingit and Haida Indian Tribes of Alaska	I believe it is imperative that we build a crossing. The vanderbuilt road access would be best. Far enough away from the airport, but close to Fish Creek for the access to housing and Eagle Crest.	Good morning, Ms. Gardner, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards, Morgan McCammon	9/28/2023	M. McCammon	
9/29/2023	Mike Stanley, NDNA	Morgan, Thank you for responding to my request. I am able to open the attachments without any problem but haven't been able to print them out in a way that is useful for my purpose. I tried manipulating the image in several ways in Acrobat to see if I could make it work but without success. So I'd like to avail myself of your offer to pick up printed copies. I can swing by the DOWL office early next week, if that works for you folks.	Hi Mike, Yes, you can go by the Juneau Office, 9085 Glacier Highway, Suite 102, Juneau, AK 99801, between the hours of 8:00 am and 5:00 pm. Would 11 by 17 inches be large enough? Marella, front desk staff, will have these available for you. Thanks, Morgan McCammon	9/29/2023	M. McCammon	Advisory committee comment - Meeting 4

9/29/2023	Laurie Craig	Good morning, Morgan, I'm asking again for Second Crossing comments filed with you by Juneau International Airport. On Monday you replied that there were numerous submissions from JNU and that you would not be able to provide copies in time for our wetland citizens' advisory committee meeting that afternoon. Perhaps I can make my request more specific by asking for the airport's detailed submission from this summer. It is insufficient to summarize the airport manager's comments as "some concerns." We know airport safety is crucial to any wetlands crossing due to the potential of a structure to interrupt flight operations at the airport. Please let me know if it is necessary to elevate my request to DOT. I prefer to deal directly with DOWL in your role as PEL reviewers. A full EIS is likely and my requests will continue through that process as well. However, sooner is better and providing copies is your responsibility now, as I understand it. Best regards,	Hi Laurie, I wanted to update you on the progress of your request. We are working with the airport manager to confirm that we have all of the airports comments. Greg Lockwood, the DOT&PF Project Manager, is aware of this process. We will share these once confirmed. Thank you for following up. Morgan McCammon	9/29/2023	M. McCammon	

10/2/2023	David Chilson Alaska District Airspace and Procedures	Do you have an update? Thank you	Hi David, There is not much new to report since July as the project has been awaiting completion of the Statewide Transportation Improvement Program to make funding available for the remaining tasks to proceed. With what funding has been available, we have completed some additional environmental fieldwork for each of the alternatives (e.g. wetlands, inter-tidal, bird surveys) to provide additional data to support the alternative screening process. The alternatives you reviewed in July are all still being considered, and the current outlook (pending funding availability) is that the Level 2 screening will be completed sometime in the first quarter of 2024. The information provided by you previously is being used to refine the alternatives to determine if there are potential solutions to some of the issues. All stakeholder feedback will be considered in the Level 2 screening process. Alternative(s) that progress beyond the Level 2 screening process will be the alternative(s) that are recommended in the Planning and Environmental Linkages Study to be included in future NEPA efforts. If you have additional questions, please let me or Greg Lockwood PE (DOT&PF's new project manager for this project) know. Thanks Steve	10/2/2023	S. Noble	

10/4/2023	Mike Stanley, NDNA	Morgan, I picked up the copies Monday afternoon and they will work for my purpose. Thank you for assisting with my request. Once I have marked up versions I'll e-mail them to you and Steve. Mike	Good morning, Mike, Thank you for letting us know. We look forward to receiving your marked up versions. Morgan McCammon	10/4/2023	M. McCammon	Advisory Committee Comment
10/4/2023	Mike Stanley	Dear Morgan and Steve, Attached are a couple of schematics for the idea I mentioned about an overpass that would cross above Egan Drive from the hospital entrance, then across the DOT parking lot, and then across Gastineau Channel. (Where the crossing would land on the island side is a separate issue.) One is from a copy of the aerial photo you provided; the other is a photo I took at ground level at the turn-off into the Salmon Creek powerhouse. These are very rough but I hope you get the concept. The idea occurred to me as I was thinking about your comments regarding the difficulty of tying a crossing directly into the Salmon Creek intersection. An overpass that started at the elevation of the hospital entrance road, and then went directly across, would seem to avoid many of the problems you identified: the crossing would be high enough to avoid interfering with barge traffic; overpass abutments could be located near the hospital drive entrance and in the DOT parking lot, which I presume would avoid the need for taking any private property or buildings; and such a crossing would be entirely outside the Mendenhall Wetlands State Game Refuge and the habitat at the mouth of Salmon Creek. And I see other possible advantages: much better access to the hospital from Egan northbound, directly up an exit ramp, and a straight shot for traffic coming from North	Michael Thanks so much for giving us your ideas at this intersection. I appreciate it. We will compare it to some of the ideas that our team has been coming up with him see if it spurs any new concepts. Steve	10/4/2023	S. Noble	Advisory committee comment - Meeting 4

		Douglas directly into the hospital, without having to negotiate the intersection light and multiple turns. The trickiest parts of this idea are the on and off ramps. An exit ramp southbound on Egan up to the overpass, just past the light, could compromise the merge lane bearing south out of Channel Drive; an entrance ramp down from the hospital entrance back to Egan would have to tie in somehow, while still leaving a way to turn right off Egan at the light; and a ramp down from the overpass for traffic coming south from North Douglas would also have to tie back into Egan. I assume, however, that traffic/highway engineers (which I am definitely not!) could wrestle with these issues. Whether this concept has any merit I will leave to you and DOT to judge, but I at least wanted to convey the idea for your review. One caveat: although I represent North Douglas Neighborhood Association on the PEL stakeholder advisory committee, this idea is mine alone and should not be considered the position of our Second Crossing Committee. Thank you. See attachment dated 10/4/2023				
10/11/2023	Mark Rorick	My Email has changed from vivalanuit@gci.net to akabadger66@icloud.com. The North Douglas comments are the same. See below Attachment unable to open	Good morning, Mr. Rorick, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have updated your contact information in the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Best regards,	10/12/2023	M. McCammon	

			Morgan McCammon			
10/12/2023	Teri Tibbett (BBNA & Douglas Advisory Board)	Hi there…Letting you know that I'm closing this email account. Please delete and replace with [redacted]. Thank you!	Good morning, Teri, Thank you for letting us know, I have updated your contact information. Best regards, Morgan McCammon	10/12/2023	M. McCammon	Advisory committee email
10/16/2023	Christopher Hoon Manager of Government Affairs – Pacific Flyway	Hello Morgan, My name is Christopher Hoon, I am the Manager of Government Affairs on The Pacific Flyway for Delta Waterfowl. I was wondering if I could please be added to the email updates around the Juneau Douglas Bridge North Crossing. This is something our team is keeping an eye on. Please let me know. Thanks,	Good morning, Chris, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I will add you to the project contact list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study and email any comments to JDNorthCrossing@dowl.com. Best regards, Morgan McCammon	10/16/2023	M. McCammon	
10/17/2023	Patty Wahto, JNU Airport Manager	Onsight Visit- Meeting with Patty Wahto regarding other DOWL projects- Juneau Second Crossing discussed during the end of our meeting Patty was concerned that the letters and outreach that the Airport had completed did not show up in the written record. She asked if I would reach out	`On site meeting	10/17/2023	B. Mello	On-site meeting

		to DOWL staff to research locating the outreach that the Airport had completed. This request was sent to DOWL employees in charge of the Juneau Second Crossing project.				
11/13/2023	STIP Comment Period shared as a curtesy	STIP ID 34146: I strongly oppose the Juneau Douglas North Crossing and any federal funding being spent to further the project. The crossing is not needed (Juneau population is decreasing), it will be environmentally harmful and degrading, it will be an eyesore to the gorgeous views out North Douglas, and federal funding is seriously needed elsewhere in Juneau and the State of Alaska (e.g. maintenance of the current JD bridge, the ferry system, better roads/connectiveness in rural communities). Negative public input on this project has been disregarded and ignored so far. I am hopeful our State DOT will see how useless this project is and consider spending our Federal funds elsewhere where they can be better utilized; DOT should know as they manage such things statewide.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. A Planning and Environmental Linkages Study is currently underway to help inform project design and identify a crossing location that supports transportation needs while minimizing impacts. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation.		DOT&PF	STIP Comment Period
11/13/2023	Judith T Brakel STIP Comment Period shared as a curtesy	STIP 34346 constructing a second Juneau - Douglas crossing. I oppose this project because it would have a destructive effect on the Mendenhall Wetlands State Game Refuge, the necessary habitat for large numbers of birds and other wildlife in the vicinity of Juneau and Douglas. Whenever possible we should encroach less on wildlife habitat. It is also a beautiful area that enriches the human lives inhabiting the Juneau-Douglas area.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. A Planning and Environmental Linkages Study is currently underway to help inform project design and identify a crossing location that supports transportation needs while minimizing impacts. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation.		DOT&PF	STIP Comment Period

11/13/2023	STIP Comment Period shared as a curtesy	North Douglas (Second) Crossing - (STIP ID #: 34346) This is a terrible idea. It is being touted as a benefit for residents of north Douglas, but is only a thinly veiled effort to benefit developers at the expense of north Douglas residents. It would have disastrous consequences for the Mendenhall wetlands, and would terribly overburden the existing Douglas highway. Long term plans outline a bench road running parallel to the Douglas highway and building that road is an absolute necessity PRIOR to opening access for additional development with a second crossing. The associated increase in trafffic, congestion, and unsafe conditions for those who live along the highway is unacceptable and the community has come out with overwhelming opposition to the second crossing at every opportunity to comment. Not an appropriate project.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. A Planning and Environmental Linkages Study is currently underway to help inform project design and identify a crossing location that supports transportation needs while minimizing impacts. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation.		DOT&PF	STIP Comment Period
11/13/2023	Evan Deisen STIP Comment Period shared as a curtesy	Please consider removing STIP ID #: 34346 (North Douglas Second Crossing) from all future plans. This project would bisect the Mendenhall Wetlands State Game Refuge and further reduce and fragment this globally designated Important Bird Area which provides critical habitat for hundreds of species of resident and migratory birds and as well as key spawning, rearing, and feeding habitat for all five species of the salmon our community depends on. The southeast Alaska Land Trust is against this proposal and I strongly agree with them. So many Juneau residents choose to live here because of the amazing wilderness we get to enjoy and the intact wilderness is a huge reason why we get so many tourists here as well and this project would	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation.		DOT&PF	STIP Comment Period

		cause significant and irreversible damage to the wild populations of birds and salmon. This project would also be very expensive and the burden to taxpayers in combination with the negative environmental impact makes this project a terrible idea.				
11/13/2023	STIP Comment Period shared as a curtesy	I strongly oppose the North Douglas crossing (STIP ID #: 34346). This crossing would bisect the Mendenhall Wetlands State Game Refuge and further deplete this unique region, which is a globally recognized Important Bird Area and serves as absolutely critical habitat for hundreds of species of local and migratory birds. This is also essential spawning habitat for all five species of salmon. Please don't invest in this massive project just to save people fifteen minutes of driving time to Eaglecrest.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. A Planning and Environmental Linkages Study is currently underway to help inform project design and identify a crossing location that supports transportation needs while minimizing impacts. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation.		DOT&PF	STIP Comment Period

11/13/2023	STIP Comment Period shared as a curtesy	#34346 We do not need another crossing between Juneau and Douglas especially since it crosses sensitive bird and other wildlife habitat. Remove that project from STIP 2024.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. A Planning and Environmental Linkages Study is currently underway to help inform project design and identify a crossing location that supports transportation needs while minimizing impacts. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation.		DOT&PF	STIP Comment Period
11/13/2023	STIP Comment Period shared as a curtesy	34346 North douglas crossing I do not agree that there is an economic need to have a second crossing between juneau and douglas island. The proposed location would severely endanger the Mendenhall Wetland Refuge ecosystem. All citizens would ultimately pay for irrevocable damage to the Wetlands. Those who might economically benefit in the long term are few and likely not residents in the community it will directly negatively impact.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. A Planning and Environmental Linkages Study is currently underway to help inform project design and identify a crossing location that supports transportation needs while minimizing impacts. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation. 11/13/2023	STIP Comment Period shared as a curtesy	Stip #34346 We do not need a second crossing to Douglas Island. I have been a Douglas Island resident for over 30 years and see no economic or other reason for a second crossing. The major reason people want it is to save a little time getting to Eaglecrest, but this is not a good enough reason to further damage the wetlands. This crossing would do far more harm than good cutting up the Mendenhall wetlands which have already been whittled down time and again with little to no thought of the cumulative effects of all this development on this important wetland area. No second crossing! Spend money on maintenance of the current bridge.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. A Planning and Environmental Linkages Study is currently underway to help inform project design and identify a crossing location that supports transportation needs while minimizing impacts. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation.		DOT&PF	STIP Comment Period
11/13/2023	STIP Comment Period shared as a curtesy	STIP ID #: 34346 I have resided on North Douglas for 45 years. There has been no instance where life and safety have been challenged by the existence of one crossing point between the mainland and the island. If the effort is to create opportunities for community expansion to the West side of Douglas Island the only viable option for the crossing is the Mendenhall Peninsula route or Northern most crossing option. It avoids the Mendenhall Game Refuge, impacts few homeowner and provides the most direct access point between the Valley commercial area and potential development on the West side of the island.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. A Planning and Environmental Linkages Study is currently underway to help inform project design and identify a crossing location that supports transportation needs while minimizing impacts. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation.		DOT&PF	STIP Comment Period

11/13/2023	Linda Baker STIP Comment Period shared as a curtesy	One of the main reasons for a 2nd crossing is in case the main bridge is inoperative for a period of time. Many of the people who work in Juneau live in Douglas plus kids who attend high and middle schools. It makes no sense to have their alternative access as far away as the Mendenhall Peninsula. A second crossing at Vanderbilt Hill provides a good alternative plus it would cut many miles off the trip to Eaglecrest. it would also be one of the least damaging to the environment and one of the most economical.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. A Planning and Environmental Linkages Study is currently underway to help inform project design and identify a crossing location that supports transportation needs while minimizing impacts. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation.		DOT&PF	STIP Comment Period
11/13/2023	John Hyde STIP Comment Period shared as a curtesy	No way. If someone is too lazy to drive another 10 miles to north Douglass then they shouldn't be driving at all. This is just another politically motivated construction project that will benefit only a very few. It will also cross the only flight path to and from the airport which could prove life threatening in the advent of an accident. It would also destroy the integrity of the largest wetlands in the Juneau area. Just another waste of dollars that could go to much more needed projects elsewhere. NO WAY.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. A Planning and Environmental Linkages Study is currently underway to help inform project design and identify a crossing location that supports transportation needs while minimizing impacts. The Project Design will include a full National Environmental Policy Act (NEPA) review including additional stakeholder engagement and preferred alternative or no action recommendation. DOT&PF	STIP Comment Period

11/13/2023	STIP Comment Period shared as a curtesy	STIP# 34346 Second Crossing This project is completely unnecessary. DOT's stated main reason for this project is to reduce congestion on the Juneau Douglas Bridge. My own research observing traffic on a weekday morning showed that there were no cars on the bridge that didn't make it through the Egan & 10th traffic light in more than one light cycle - so there is no congestion problem on the bridge. Citizens paranoid that a vessel will hit and disable the bridge, rendering emergency medical care inaccessible? - for a fraction of the cost of a new bridge, DOT should construct a small ferry dock in the vicinity of the downtown harbors and install a small ferry (like the Ketchikan airport ferry), for use if an accident ever befalls the Juneau Douglas bridge. There is absolutely no need for a second crossing of the channel - citizens voted overwhelmingly against this a number of years ago. DOT: stop trying to find stupid projects to waste money on!!!	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. 11/13/2023	STIP Comment Period shared as a curtesy	The North Douglas Secoond Crossing (ID #34146) could be vitally important in connecting residents of Douglas Island to important facilities should either the existing bridge or the bottleneck section of the expressway be closed for some reason. But to do that effectively it needs to go from the part of Douglas where most people actually live to the closest point on the mainland that has duplicate routes to both the hospital and the airport. To be clear, that would be Salmon Creek. A crossing located further out, especially beyond the airport as the map suggests, would truly be a bridge to nowhere. It would benefit no-one other than the workers who build it and the shady group of speculators who have development plans for North Douglas. Juneauites do not need or want a highway across the wetlands.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. 11/13/2023	STIP Comment Period shared as a curtesy	The only other new construction project identified for Juneau in the STIP is ID 34146, the Juneau Douglas second crossing. This should not be a high priority compared to other basic road and marine highway needs for Juneau and Southeast Alaska in my view. However, if this project goes forward, it should be routed outside the boundaries of the Mendenhall Wetlands State Game Refuge. The Refuge's wildlife, fisheries, ecological, recreational, hydrologic and scenic values are outstanding and well-documented, and too valuable and irreplaceable to build a road through the heart of it. Off-refuge alternatives must be included in the full environmental review process.	As for the Juneau Dougls North Crossing, we understand this is a project for which there is both support and concern. The City and Borough of Juneau has identified this project as a top priority, included in the 2013 Comprehensive Plan, 2015 Juneau Economic Development Plan, and numerous other plans and resolutions. 12/20/2023	Adam White Government Affairs Alaska Airmen's Assoc.	Thank you for the introduction Melissa. There seems to be some concern by several folks that comments from aviation interests are being downplayed or not being taken into consideration in the Juneau/Douglas Island crossing project. I find it highly unlikely that this would be the case based on years of being involved in processes like this. Some of this skepticism appears to be rooted in accusations that the city of Juneau has been pressuring folks connected to the airport to not get involved. This also seems odd to me considering how dependent the city is on reliable and continuous aviation service to keep Juneau functioning. Any proposed location for a new bridge that would interfere with instrument approaches at the airport is counterintuitive. Any insight or information anyone can provide would be helpful. I'd like to quell the fears of the folks that have reached out to me. Additional Comment Thanks Steve for the breakdown, I especially appreciate the comment that if an alternative interferes with an approach it would be considered a fatal flaw. Like I said in my earlier message, I have been involved in a lot of these projects through the years and I have faith and confidence in your team and the process. I think a lot of the suspicions the folks have that have reached out to me are more with how the City of Juneau is putting political pressure on them and that they can not see the comments online that have been filed.	Adam, I can assure you that the team welcomes feedback from the airport and the public on the Second Crossing PEL study. We have had multiple public meetings, open houses, advisory group meetings, project surveys, and one-on-one and group stakeholder meetings. We are two years into this study and it is a lot to try and put in an email. If you want to have a short Teams call with me and Greg Lockwood from DOT&PF, we could get you caught up on the past couple years of interaction on the PEL study that is on-going. Here are a few facts that may help you: • The PEL study has been on hold for the past 6 months due to the lack of funding and it only got restarted about 2 weeks ago. • The airport is a member of the Technical Advisory Board for the PEL study • We are going to have a worksession with the airport board at their January board meeting to answer some of their recent concerns. • There is still plenty of time to provide input on the alternatives and the Technical Advisory Board will have a formal comment period after the alternatives screening analysis is submitted for their review. • The PEL study is a planning study that will not decide on a single alternative for the crossing, rather it is a planning effort that helps to narrow down the range of alternatives. There are currently 5 alignments under consideration. The future environmental documentation effort is the process that will ultimately decide a "preferred alternative" and that process will not begin until after the PEL study is complete. We are still at	12/20/2023	Steve Noble	

		Additional comment Thanks Steve for the breakdown, I especially appreciate the comment that if an alternative interferes with an approach it would be considered a fatal flaw. Like I said in my earlier message, I have been involved in a lot of these projects through the years and I have faith and confidence in your team and the process. I think a lot of the suspicions the folks have that have reached out to me are more with how the City of Juneau is putting political pressure on them and that they can not see the comments online that have been filed.	least 6 months away from finishing the PEL study, so the environmental documentation will likely start in late summer or fall of 2024 and will require a couple years to complete. • We have communicated to the airport leadership that if there are any of the alternatives under consideration that are in conflict with the airport ALP or any of the approach surfaces, that we will consider that conflict to be a fatal flaw for that alternative. We would either revised the alternative to avoid the conflict or we would eliminate it from further consideration as part of the screening process. We are meeting with the airport in January to help make sure that they have factual information that they are providing input on and that they are not basing their comments on speculation or misunderstandings. If you have additional questions or if you would like to have a discussion to better understand what the alternatives are that are being considered, please let me know and I'll be happy to set up a Teams call. Thanks for reaching out, Steve			

12/22/2023	Janice Schultz	I strongly feel that the North Douglas crossing is necessary for many reasons and would benefit the entire community. When Egan is closed we are totally put at a standstill even in an emergency which could be not only inconvenient but deadly. Being able to get first responders to an emergency sooner is so very important and necessary for our safety and security and should be considered. We have a huge opportunity right now and it would be foolish to irresponsibly not to take advantage of it because it will never happen again. Please do whatever is necessary to make this happen for the sake of the community. Thank you, Janice Schultz	Good afternoon, Janice, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the project email list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Jovie Garcia	12/27/2023	J. Garcia	
1/10/2024	Flynn Casey Pronouns: he/him/his Alaska Dept. of Fish and Game Habitat Section Region I	Hello Kate, I've attached my trip report on stream surveys conducted in late October 2023, in the vicinity of preliminary alternatives identified in ADOT&PF's Juneau-Douglas second crossing PEL study. Thank you, See report dated 1/10/2024	Good morning, Flynn, Thank you for sharing your trip report on stream surveys with the Juneau Douglas North Crossing PEL Study team. I have shared this report with the environmental team to incorporate into the PEL study analyses. Best regards, Morgan McCammon Full report posted on project website and used in Level 2 Screening	1/18/2024	M. McCammon	

1/17/2024	Christopher Hoon Manager of Government Affairs – Pacific Flyway Delta Waterfowl The Duck Hunters Organization™ DeltaWaterfowl.org	Hello, My name is Christopher Hoon I am submitting this letter regarding the Juneau Douglas Bridge North Crossing, on behalf of Delta Waterfowl. Best, See letter dated 1/17/2024	Good morning, Chris, Thank you for your interest in the Juneau Douglas North Crossing PEL Study and sharing the Delta Waterfowl comment letter. 1/30/2024	Lauren Cusimano Communications Manager Audubon Alaska	Hi Sam, I'm Lauren Cusimano, the Communications Manager for Audubon Alaska. I'm working on an article about the Juneau-Douglas North Crossing—something of an explainer piece about the Juneau-Douglas North Crossing and Taayushee/Mendenhall Wetlands for folks outside of Juneau, Southeast, or even Alaska. It will be published on Audubon Alaska's online news feed, "On The Wire." I would like to interview someone at the Alaska Department of Transportation and Public Facilities for the story, hopefully, someone involved with the project. It shouldn't take more than an hour and I'd be happy to send a Zoom invite or meet in person if possible (I am located in Anchorage). If schedules are tight, I'd also be happy to send over my questions via email. Please let me know what you think whenever you get a moment. Thank you so much.	Lauren, Greg Lockwood, our Southcoast Region Design Chief, will be your best point of contact for an interview. I've cc'd him in this message. Please let me know if you need anything else! Kind regards, –Sam	2/2/2024	S. Dapcevich, DOT&{F	

2/5/2024	Stuart Cohen	To whom it may concern: I am writing in regard to the Juneau Douglas North Crossing PEL Study. I believe that alternatives that cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL study process or in an Environmental Impact Statement. This is a poor idea that has been resuscitated with the smelling salts of free Federal money, and I suspect it has more to do with creating jobs for construction companies and realtors than any benefit to the community. The 2nd Crossing has long been ranked extremely low by the AK DOT due to its redundancy and the lack of traffic on the existing bridge. When Juneau had a chance to vote whether to fund the project themselves, the citizens voted it down by a wide margin. Funny what the prospect of free money will do to otherwise sound organizations. It's a very destructive project, further encumbering and dividing our beautiful Mendenhall Wetlands and wrecking the neighborhood for those who live in North Douglas (I am not among them) It's a way of spreading suburban sprawl to North Douglas and, coincidentally, increasing the value of private lands held along the (similarly useless) Pioneer road on West Douglas. All of this would be done at taxpayer expense, as would providing infrastructure to these new areas. Here are some other reasons why: — This project is uniquely susceptible to fatally flawed alternatives because of the tremendous wildlife, habitat, ecosystem services, recreational,	Good morning, Stuart, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	2/8/2024	M. McCammon	

		and viewshed values of Taashuyee, the Mendenhall Wetlands. Again, alternatives which cross the Mendenhall Wetlands State Game Refuge are fatally flawed and should not be advanced in the PEL process or in an Environmental Impact Statement. (Watch: The history of the refuge.) — The purpose and need of the study should be clarified to avoid impacting the Mendenhall Wetlands State Game Refuge and the Salmon Creek, Mendenhall River, and Fish Creek estuaries. —There is not a demographic demand or need for this project. Juneau is not growing and is projected by the Alaska State Demographer to shrink by over 10% through 2050. This places a particularly high burden of proof for a need for this project and is critical in weighing the relative importance of alternatives that cross the Mendenhall Wetlands. This project will likely increase community sprawl and create a services cost burden for all community members. — Alternatives that reduce the short-duration traffic pressure on the existing Douglas Bridge and intersections should be evaluated, including non-crossing opportunities such as improved public transportation and area-wide housing density improvements. — The expenditure of large amounts of federal tax dollars in a community that is not growing for a project which would expand the community footprint is, at best, questionable. Gunalchéesh/thank you,				

2/7/2024	Sue Rodman Statewide Lands and Refuges Program Coordinator Division of Wildlife Conservation Alaska Department of Fish & Game	Greg, Please find attached ADF&G's letter from the Division of Wildlife Conservation regarding the 2nd Crossing Options for Juneau – North Douglas Island. Thank you for your cooperation in timing and incorporation of these comments into the PEL study. We look forward to continuing this process with DOT and Dowl. 2/18/2024	Wendy Hogins	Recommend posting Volume to Capacity of the Existing Bridge Memo. I presume memo includes level of service analysis. Currently there is no data on project website demonstrating there is a congestion issue. Granted the forecasted future traffic increases are not significant -suggest you provide basis/analysis as to how arrived at given CBJ static or declining population growth projections	Good afternoon, Wendy, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. Information on the current and forecasted volumes of traffic on the existing Juneau-Douglas and potential future north crossing bridges are available on the website: Origin Destination Memo: https://www.jdnorthcrossing.com//documents/Origin%20Destination%20Data%20Memo_Final.pdf Bridge Volume Forecast Memo: https://www.jdnorthcrossing.com//documents/Bridge%20Volume%20Forecast%20Memo_Final.pdf Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	3/1/2024	M. McCammon	

2/27/2024	Catherine Pohl	Hi Kristen, Where can I find the following document? It is referenced in the recently released bird/habitat field study report. The report wildlife/habitat technical memorandum you do have online is dated Feb 2023, is not apparently authored by Parametrix, appears to be an entirely different report, or perhaps some sort of abridgement: Parametrix. 2022. Wildlife and Fish Resources Technical Memorandum for the Juneau Douglas North Crossing PEL Study. April 21, 2022.	Hi Catherine, Thanks for reaching out. This report should be on the project website. I'm cc:ing Theresa Dutchuk (our Environmental Lead on the PEL Study). She should be able to direct you to the appropriate place on the website. Let us know if you need anything else. We appreciate your continued interest and feedback on this project! Thank you, Kristen Additional response Hi Catherine, Great catch. I looked into your question and the reference has the wrong dates. We updated the Wildlife and Fish Memo in February 2023 in response to public and agency feedback – it appears that the references in the field study report "Bird and Habitat Surveys Report, Jan 2024" had the older version's date. In sum, the Bird and Habitat Surveys Report that was recently released is referencing the Wildlife and Fish Memo from February 2023, which was written by Parametrix as part of the JDNC project team. Please let me know if you have any other questions. Theresa Theresa Dutchuk Senior NEPA Specialist DOWL	2/28/2024	K. Hansen	

3/1/2024	Laurie Craig	Greetings, I am asking again, as I did months ago without adequate response, for copies of comments submitted to contractor DOWL by Juneau International Airport regarding crossing options for the Juneau-Douglas Second Crossing. This is essential public information that has been hidden from public review by phrases in DOWL comments such as “the airport has concerns.” Indeed, the airport has significant concerns regarding the hazards that would be created for airport operations by crossings at Sunny Point and Mendenhall Peninsula. Please send copies and respond to this email at your earliest opportunity.	No response. All comments will be in the final PEL Study Report.			

3/3/2024	Catherine Pohl	Where can I find the original tech memo? It was quite different, as I recall. For the public PEL/NEPA record, both versions must remain available. Actually, it IS probably referencing the older document, since most of the bird info was removed in your "updated" version.	Hi Catherine, The old version of the memo is no longer valid, the version on the website provides the best current information. The changes made from the old version to the updated one include one sentence added under the amphibian section regarding the documented breeding area for western toads. Also, a clarification was made regarding spotted frog and Pacific chorus frog being documented in southeast, but not near Juneau. The only other addition to the document regarded the short-haired albatross clarifying that they may use the study area, but are not expected to. Please let me know if you need anything else. Theresa Theresa Additional Response Hi Catherine, Thank you for your consideration of the administrative record for the project. I will confirm with our team whether or not we need to keep the outdated memo version in the record. As noted in my previous email, the only change regarding birds between the two memos is the clarification on the short-tailed albatrosses Apologies, I see I called them short-haired albatross erroneously in my previous email. Theresa	3/3/2024	T. Dutchuk	

			Theresa Dutchuk			

3/3/2024	Catherine Pohl	OK-- those do look like minor changes. They are not entirely correct, however, as toads have been recorded on the west side of Mendenhall River as well. Well then, where did I see an extended section on bird use of the project area that included query results from ebird for various habitat types and locations, with a focus (oddly) on upland areas. Where is THAT document now, if it was not the previous wildlife tech memo? Was there one specifically on wildlife, or birds, that was posted earlier?	Hi Catherine, I wonder if you are thinking of the Field Study Work Plan (attached)? We did share it with the stakeholders and Fish and Wildlife Service for review and comment prior to commencing fieldwork. It is not published on the website because it was an internal guiding document verifying field methodology with the jurisdictional agencies and stakeholders. The only other locations that we have discussed birds is in the Baseline Data Memo, Field Study Report, and Environmental Setting Document (links embedded). Theresa Theresa Dutchuk	3/3/2024	T. Dutchuk	

3/3/2024	Catherine Pohl	Thanks for clarifying this – and on the weekend! It was the map showing "numbers of bird species" at specific points within the project area that I am remembering, in both the baseline data and setting documents. (What does this mean, by the way? It is too high for numbers of species and perhaps too low for numbers of individuals. Is this in total, at one time? An annual sum of individual bird observations? The map should clarify this.) I believe you shared previously that this was from eBird. It is still not clear why you have not used the USFWS survey or the more recent Hotspots survey, which are both more comprehensive, providing solid information by species, species group, and season and a wider scope of locations. Even if using only eBird, the data could have been presented by species or species group, season, and approximate location. It is also possible to derive effort statistics if using complete lists, so that relative abundance can be compared spatially and seasonally. There should be an explanation within your reports of the basis of your numbers, including a caveat that eBird data is not systematic but entirely incidental and most available or abundant for easily accessible and often-visited areas (unfortunately also true for your survey data). The info from the ADF&G habitat mgmt guide is likely very out of date; most of these guides date from the early-80. The nesting "south of the airport" probably referred to tern nesting that ended long ago when the spoil islands became heavily vegetated and nesting moved near the glacier. There may be some gull or other waterbird nesting out there now, not sure what the current situation is, but it does not appear that there has been any attempt to document the current situation in your	Hi Catherine, Thank you for your detailed notes and recommendations below. You have provided valuable observations. The Planning and Environmental Linkage (PEL) study includes reporting based on available desktop resources. In select circumstances the PEL study team chose to conduct fieldwork to validate the desktop resources (e.g. wetland delineation, intertidal habitat, bird habitat, etc.). Additional research, such as your recommendation to complete interviews with local bird watchers, could be conducted during the National Environmental Policy Act (NEPA) stage, which follows this planning study. Additionally, details would be required under NEPA, such as the extent and importance of tidal wetlands and the specifics of high and low salt marsh types, sand or mudflats, mussel/rockweed beds, deltas, and coastal meadows, that have not been evaluated in depth due to the planning level analysis of this PEL study. A NEPA review is very comprehensive and detailed and would require an analysis of the functional value and importance of resources, in order to prepare for avoidance, minimization, and mitigation. This PEL study takes a high level approach based primarily on readily available data to evaluate multiple potential solutions to an existing problem. Thank you again for your detailed consideration. Theresa	3/4/2024	T. Dutchuk	

		reports (what species or locations?). There is plenty of passerine nesting along the edges of the refuge yet your ratings matrix notes zero nesting habitat at most sites. What is your definition for nest site/location? Interviews with local birders and bird biologists would have clarified both colonial waterbird and refuge edge passerine nesting for you. What are the nesting locations noted for Sunny West (species, source, date)? Eagle use has probably changed as well since the ancient habitat management guides, largely due to the dump and hatchery. Salmon Creek, Lemon Creek and the dump/Vanderbilt area are concentration areas for eagles, though they are present all along the refuge edges, the Mendenhall river, creeks, and channels. Most striking, all of your reports omit the importance of refuge habitats, including specific areas within the alignments, for stopover, staging, wintering, and breeding bird concentrations including use by both resident and migrant populations. Some of the key concentration areas and habitat types lie within the proposed alignments. This leads to problems in your ratings matrix. It does not escape notice that acreages of bird habitat types are not included in your ratings matrix. Project documents obscure, misrepresent and/or entirely avoid mention of both the extent and importance of tidal wetlands let alone the specifics of high and low salt marsh types, sand or mudflats, mussel/rockweed beds, deltas, and coastal meadows. Does your ratings matrix acreage for wetlands include intertidal wetlands, or only freshwater wetlands, and what about				

		wetlands with tidal and freshwater influence? Do your acreages for intertidal areas include vegetated and unvegetated areas-- and is this from your field survey or the inaccurate cover type map? What is the basis for the "disturbed area" acreage calculation and is it removed from totals for freshwater or tidal wetlands or tidelands and treated as a separate type? Your cover map representation of vegetated vs unvegetated tidal areas remains very inaccurate, as noted below. Since this must have been noted during the fall field surveys, if not before, it is surprising that it is not corrected in the updated tech memo or the field study reports. If you had placed a discernible basemap under the wetland mapping in your report, basemap accuracy could be assessed using the fall field survey results, supposedly one of the goals of the surveys. A quick inspection shows that your wetland report fails to map a large number of stream and tidal channels within the alignments; these are usually considered essential for delineation maps or any sort of impact assessment. I recommend that you provide updated field survey reports with delineation maps clearly shown over your (hopefully updated?) cover type map and recent imagery-- or provide the shapefiles upon which your maps are based so that others can do the needed comparisons. Your cover map does not show a channel connection between the east and west sides of the refuge, another serious gaffe since it bears on access as well as hydrologic connectivity and habitat. Your eelgrass survey results table should include					

		tidal range at the time of each survey. Your intertidal survey fails to document the extent, character, or importance of low and high salt marsh types and other tidal habitat types across the project area or within the alignments. It attempts to roughly cross-reference the Cowardin tidal wetland definitions based on timing of tidal flooding to commonly used marsh type names but fails to do this clearly or in a spatial way. It misses this existence of bedrock on the Douglas side near the 5 mile alignment. The field study reports are not ripe for review, or for use in decision-making, without the data and map corrections suggested above. You would be well-advised to make these fixes and extend your review dates accordingly.				

3/4/2024	Catherine Pohl	Thanks for your prompt response. I respectfully disagree. Habitat types such as low and high marsh, coastal meadows, and tidal channels, and basic information on wildlife use are exactly what is needed for planning level analysis. The PEL process was in fact created to efficiently avoid unnecessary impacts and analyses by identifying the key resources and impacts early in the planning process. Consultants were paid to plan and conduct field surveys that include mapping high and low marsh as well as other intertidal and upland habitat types. Your cover maps were to be ground-truthed, assessing the need for additional imagery and mapping. Presumably, these recent field surveys and previous data summary efforts were intended to contribute to the impact matrix-- but your matrix fails to incorporate the key readily available or field survey information. Here are a few questions along with a request for GIS map layers; answers and map layers are needed to meet review deadlines. TAC members have requested assistance in reviewing the field reports and site impact matrix. To do this, I need map layers and answers to a few questions. Could you please provide GIS layers for the wetland delineation and cover layers? These could be zipped and sent, or I am happy to provide a flash drive and pick them up in Juneau. The wetland layer is not shown over a useful basemap or imagery. For comparisons to imagery and elevation data and to verify acreages, the wetland and cover layers are needed in GIS form. Answers to the following questions are needed to interpret the impact matrix and study reports under	Hi Catherine, Apologies on the delay getting back to you. Regarding the GIS data, we are actively working with our data and it can be made available on request when we conclude the PEL study. Detailed map books showing the data are offered in the Survey Report Memos and the Baseline Data memos that we have previously provided links for on the website. Please refer to the maps and map books for mapping information. Please see responses to your questions below. -- What does the" #bird species" mean on your fish & wildlife tech memo wildlife map? I believe these were drawn from eBird but they would not be numbers of bird species, or numbers of individuals-- so what are these numbers? Could you please provide me the figure number to which you are referring? --What "nests" are referred to in the selection matrix just released – what species or species group was surveyed? Where does this data come from? What was the extent, scope, and date of the nest survey? Why was this chosen for the matrix? The data for this parameter comes from Armstrong, et al., 2004. Please refer to the report for extent, scope, and dates. This information was chosen to identify potential impacts to important migratory bird habitat. --What do the acreages of "wetlands" and "intertidal" represent? The acreage represents acreage potentially directly impacted by construction. Are "wetlands" only freshwater wetlands or do they include tidal wetlands? Wetlands include both freshwater and tidal. Does intertidal include both vegetated and unvegetated intertidal? Intertidal includes both vegetated and	3/11/2024	T. Dutchuk	

		current review or referenced within them: -- What does the" #bird species" mean on your fish & wildlife tech memo wildlife map? I believe these were drawn from eBird but they would not be numbers of bird species, or numbers of individuals-- so what are these numbers? --What "nests" are referred to in the selection matrix just released – what species or species group was surveyed? Where does this data come from? What was the extent, scope, and date of the nest survey? Why was this chosen for the matrix? --What do the acreages of "wetlands" and "intertidal" represent? Are "wetlands" only freshwater wetlands or do they include tidal wetlands? Does intertidal include both vegetated and unvegetated intertidal? (It looks like there is no tally of affected salt marsh acres, which is astonishing, considering its global, national, regional, and local importance.) Maps showing your matrix acreages would be helpful. Were these drawn from the delineation maps or the cover map? --What does "disturbed" represent? Are these removed from the acreages of wetlands or intertidal or are they included in them? Thanks very much.	unvegetated. (It looks like there is no tally of affected salt marsh acres, which is astonishing, considering its global, national, regional, and local importance.) Maps showing your matrix acreages would be helpful. Were these drawn from the delineation maps or the cover map? Please refer to the Reports for Intertidal and Wetland surveys for maps on the project website. --What does "disturbed" represent? Are these removed from the acreages of wetlands or intertidal or are they included in them? Could you please clarify to what document you are referring? Thank you for your interest in this project, Theresa			

3/5/2024	Linda Shaw (she | her) Wildlife Biologist, Alaska Region NOAA Fisheries | U.S. Department of Commerce	Hi Morgan and all, I just became aware of this mapping data source for coastal resilience and fish and wildlife resources called the Coastal Resilience Evaluation and Siting Tool (CREST), that includes layers for the area of the Juneau Douglas Second Crossing as another source of information for evaluating the project. Here is the link. https://resilientcoasts.org/#Home There is an Alaska tab to navigate to Juneau-Douglas and additional information on the data layers. Additional Comment Awesome! Thank you so much for adding it to the analysis Theresa. Linda	Hi Linda, What a great mapper. We can use the data to see how each alternative fares. Thank you! Theresa Included in Level 2 Screening	3/5/2024	T. Dutchuk	Advisory Committee Meeting 5
3/5/2024	John Goeckermann Office of Senator Kiehl	Good afternoon, I am a staffer for Senator Kiehl I've been tasked with keeping track of the JNDC meetings/activities for the Senator. I am wondering if I could get the zoom link for the meeting on Thursday any other information about the in-person meeting. The Senator may be able to make it in person, but his schedule is chaotic. Thank you	Hi John, The virtual meeting will be held Thursday, March 7, 1:00-3:00 p.m. via Zoom, https://us06web.zoom.us/j/81726535695?pwd=XMezc2K3xUvQgis2bJoYWZTMJfENDP.1. The in person meeting will be held in the Conference Room at The Huddle on Thursday, March 7, 4:00-6:00 p.m. I will forward the invitations for both meetings. We are happy to have the Senator participate when he can and for you to participate also. Thank you for reaching out.	3/5/2024	M. McCammon	Advisory Committee Meeting 5

			Morgan McCammon			
3/5/2024	Matt Robus	Matt called say he would be attending one of the advisory committee meetings on Thursday, March 7, 2024. He also asked when the draft level 2 screening results would be shared and what comment period could be expected following the meeting. Morgan shared that the draft level 2 screening results were shared with both advisory committees on March 1, 2024, and the meeting would be followed by a three week comment period, with comments requested by March 28, 2024. Matt asked if there would be any other opportunities for comments durning this process before the PEL Study was complete. Morgan shared that there would be a final public meeting in summer 2024 to share the draft PEL Study Report, with a 30-day comment period. Morgan then resent the March 1, 2024, email to Matt.	Hi Matt, Thank you for calling. Please see the email sent March 1 with the draft level 2 screening scoring and impact tables. We look forward to talking with you on Thursday. Best regards, Morgan McCammon	3/5/2024	M. McCammon	Advisory Committee Meeting 5

3/6/2024	Linda Shaw (she | her) Wildlife Biologist, Alaska Region NOAA Fisheries | U.S. Department of Commerce	Hi Morgan, Could you add Molly Zaleski, who has been teaming up with me on the JD 2nd Crossing project to the invite for tomorrow's meeting? Her email in on this. Thank you,	Hi Linda, I will forward the meeting invitations and materials to Molly. Thank you, Morgan McCammon	3/6/2024	M. McCammon	Advisory Committee Meeting 5
3/6/2024	Molly Zaleski - NOAA Federal	Thank you, Morgan. I'll review these and I responded Yes to the 1-3 pm Zoom meeting. If I have questions about EFH designations or helpful clarifications (on salmon EFH in particular), would that be helpful to share during the meeting or should I provide a write-up to you via email? I'm also wondering if there's been any early coordination with another NOAA division, Protected Resources, on marine mammal interactions. Most proposed crossings may be shallow for humpbacks, but certainly Stellar sea lions, harbor seals, and other marine mammals in the area may mean the project requires a Section 7 Consultation and a marine mammal observer on site. Thanks again,	See response to Linda and Molly	3/6/2024	M. McCammon	Advisory Committee Meeting 5

3/6/2024	Linda Shaw (she | her) Wildlife Biologist, Alaska Region NOAA Fisheries | U.S. Department of Commerce	Morgan and Molly, To follow up Molly's comments on marine mammals, would there also be distribution maps for humpback whale, Steller sea lions and harbor seals, and perhaps also harbor porpoise occurence in the project area? And forage fish species distributions for those marine mammal species as well as EFH fish species to include eulachon and sand lance?	See response to Linda and Molly	3/6/2024	M. McCammon	Advisory Committee Meeting 5
3/6/2024	Linda Shaw (she | her) Wildlife Biologist, Alaska Region NOAA Fisheries | U.S. Department of Commerce	And also krill, a prey species for whales, see attached.	Hi Linda and Molly, Please bring comments and questions to the meeting. We have allotted time for group discussion. Also, please feel free to follow up after the meeting with additional comments and questions. We are requesting feedback on the information presented by March 28, 2024. Additional response in Advisory Committee Meeting 5	3/6/2024	M. McCammon	Advisory Committee Meeting 5

3/6/2024	Linda Shaw (she | her) Wildlife Biologist, Alaska Region NOAA Fisheries | U.S. Department of Commerce	Additional comment Thanks Theresa, and yes, great information! What I was speaking to was distribution map polygons to include the marine mammals, in addition to the narrative, and some species like eulachon and krill that I can't find mentioned anywhere, although if I overlooked them, please let me know.	Hi Molly and Linda, Looking forward to your participation in the meetings! In case you missed it, we have baseline data memos and maps from which we based the alternative screening. The Wildlife and Fish Memo is located here: https://www.jdnorthcrossing.com//documents.html Theresa	3/6/2024	T. Dutchuk	Advisory Committee Meeting 5
3/6/2024	Craig E. Dahl Government Affairis Greater Juneau Chamber of Commerce	Morgan, I'm sorry to ask the obvious, but when I planned to be at the Huddle meeting in person, I overlooked by own plan to be in Sitka for the Southeast Basketball tournament. I have commitments over there and not sure of times yet, but I may be able to do the zoom meeting at 1:00 even if I can't hang on for the entire time. Could you send me a zoom link please.	Hi Craig, Here is the Zoom meeting information: Join Zoom Meeting https://us06web.zoom.us/j/81726535695?pwd=XMezc2K3xUvQgis2bJoYWZTMJfENDP.1 Meeting ID: 817 2653 5695 Passcode: 904248 We hope you can join us. Morgan McCammon	3/6/2024	M. McCammon	Advisory Committee Meeting 5

3/8/2024	Sue Rodman Statewide Lands and Refuges Program Coordinator Division of Wildlife Conservation Alaska Department of Fish & Game	Good morning Steve and Greg, Thank you for the presentation yesterday. Your openness for us all to communicate and be involved is appreciated. I left Steve a voicemail; I have some questions about process and timelines. Below is my summary and I'm available to meet via phone or in person. My desk line is (907) 267-2274 and my cell is (907) 317-7236. Thanks, Sue In this second screening process, I understand there will be a revised list of alternatives prioritized by the information collected and comments received by March 28, 2024. That memo would then be posted / distributed and used to develop the NEPA for the project. This will all be presented at an Open House this summer. • The due date for comments (March 28) was only announced yesterday; this 21 day window is seemingly short for the 400+ pages of information to process. I recognize hat documents have been posted as they become available on the web page, but I was still surprised by the short turnaround for this phase. Is it possible to extend this for two additional weeks to April 11? • Considering the methods that were used to gather data during last fall's field work, the results are compromised in terms of following protocols that are more widely accepted particularly for bird surveys. While that was preliminary to support the second screening process, you mentioned that the NEPA process will involve more studies to a greater detail. Will we be able to provide input on how field work is conducted during the NEPA process? We collectively include a wide variety of experts that	Meeting with ADF&G on 3/19/2024 to discuss concerns			Advisory Committee Meeting 5

		have worked in the Mendenhall Wetlands for decades and would be able to give scientifically credible guidelines on conducting research there. • Is the ADF&G letter that was submitted on 2/6/2024 being integrated into this synthesis as it was received before March 28? We do plan to submit another comment letter for this round of screening. • When the date of the open house is available, we would like immediate notification. • Is there a way to see other agency and organizational comments submitted to Dowl and DOT regarding this process? It seems that their input would be a valuable piece of the public record.				

3/8/2024	Sue Rodman Statewide Lands and Refuges Program Coordinator Division of Wildlife Conservation Alaska Department of Fish & Game	Hi Steve, My name is Sue Rodman. I met with you folks yesterday at the Second Crossing meeting and I worked for the Alaska Department of Fish and Game. I had a few questions for you about the Pell process and how these comments will get synthesized. My number is 267-2274. I'm also available on my cell phone 317-7236. Those are both 907 area codes. Alright, thanks. I'll look forward to visiting with you here in the next couple days. Bye.	Meeting with ADF&G on 3/19/2024 to discuss concerns			Advisory Committee Meeting 5
3/9/2024	Francis Adams	The Salmon Creek crossing is the alternative that balances wetland integrity and development options. Thank you.	Good afternoon, Francis, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	3/11/2024	M. McCammon	

3/11/2024	Joshua Adams	Dear Juneau Assembly and City Manager, Much consideration has been given to the second Douglas crossing, which could open up the possibility of development and access to North Douglas. The project has many advantages for Juneau, and word has it that Dunleavy is especially keen this year on divvying out funds in preference to certain infrastructure projects with an emphasis on roads and bridges. Our governor tends to be capricious when concerned with certain pet projects. Dunleavy's caprices change from year to year, but word has it that this year he is eying new roads and bridges in smaller communities for improved access - there seems to be a window of opportunity for state funding for these projects as a priority over other things. It seems that the city manager has picked up on this, as I saw proposals for the additional Douglas crossing on the cbj website: Juneau Douglas North Crossing – Draft Level 2 screening results – City and Borough of Juneau In short, I think it's opportune. A new Douglas crossing makes development of Juneau's golden isle more feasible from a traffic and legal standpoint. This is one project that has a window of opportunity staring directly at it. I encourage you to focus your attention toward this project, and have a further comment to make regarding some of the proposed choices for access. The option marked out in purple seems like a long shot, both in distance and funding. My response to this option might seem unexpected, given the tendency of NYMBYism in our community: I am for it. I think that a crossing from the Mendenhall	Good afternoon, Joshua, The City and Borough of Juneau City Manager shared your comments with the Juneau Douglas North Crossing PEL Study Team. We appreciate your interest. I have shared your comments with the project team and added you to the study update list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	3/11/2024	M. McCammon	

		Peninsula could be advantageous for two reasons. It is good to connect a bridge to North Douglas because it provides an access point for public transportation to service that area without having to double back. The adept use of public transportation, coupled with biking, helps us to reduce traffic and the use of fossil fuels. I like the idea of making a circle around the airport because it leaves further development options open in the future. The other options seem more confined to the purpose of merely adding a much-needed second bridge to Douglas. The other thing that appeals to me about the purple crossing is that it connects Wilma Avenue to the Blueberry Hill trail. This is a popular mountain biking destination, and I would suggest it be developed as a trail, even if it is not used as a second crossing to Douglas. The Wilma Ave. access is a sort of continuation of the Mendenhall Wetlands trail, and a surprising amount of people cycle all the way from there to Auke Lake and beyond. Engineer's Cutoff road isn't really safe for biking due to its steep embankments and narrow lanes for cars. A decent road or biking path from Wilma Ave. that runs on the East side of the Mendenhall Peninsula could be done cheaply due to the relatively flat, gentle ground East of the FAA tower. sincerely,				

3/11/2024	Catherine Pohl	Hi Theresa, Thanks for your response. You have not answered the question about "disturbed habitats". Where did you get these acreages for your ratings matrix, and how do you define disturbed? Regarding the GIS layer-- The hardcopy maps of delineation and intertidal are not shown over useful baselayers so are hard to evaluate. You have asked your advisory committees to review and comment on them and they have asked me to assist with that. In order to do that, we need to lay the delineation and intertidal cover layers over good base layers, so we need the shapefiles. This should be simple to provide with zip files or I can drop by with a flash drive. Giving us the draft upon which you asked us to comment would not prevent you from using them or revising them, and instead may help you obtain a better final draft. Presumably that is the intention of asking for review. Regarding the # nests data-- I do not see this within the Armstrong et al 2004 Hotspots report-- that is the one you are referencing? What am I missing? In fact, they say they do not have much info on dispersed breeding season use of the upland edge and meadows.So again, please provide the data source for your # nests in the ratings matrix, by page or figure number as well as title, author, and date. It is not in the 2004 Hotspots report. Was it perhaps the USFWS report by Caine et al? Or something recent from others? The Hotspots report does note that birds nest in the supratidal edge and coastal meadows, of course, but specifically says they have little data on this dispersed use since it was not the focus of	Hi Catherine, We appreciate you taking the time to review our environmental documentation and screening. There is no additional data to provide at this time. Please use the sources available on the website, or delivered as part of the advisory committee meetings to provide comments and/or questions. The project team will be reviewing all comments and questions received from advisory committee members once the review period is complete on March 28. Theresa	3/11/2024	T. Dutch uk	

		their survey. It also notes that summer is the season of least bird use of the Mendenhall wetlands area, also what is expected for a wetland that is important for migratory stopover and as a wintering area. Breeding season use, while significant, is not the key use of most the refuge, so in any case, # nests is not a good indicator of value unless you are looking just at the upland edge. I just spoke with Bob Armstrong and Richard Carstensen, two of the authors of the hotpots report. Neither are aware of a data set for nests for the refuge, though Bob noted that many decades ago he detected many nests in a number of areas with his colleague Frank Glass, most of which are not used any more due to habitat change and dogs. Bird habitat is arguably the most important habitat value of the project area and the primary value for which this public resource was protected as a refuge, so it is important to provide the basis for your ratings of bird use and habitat, particularly wetland habitat. In my view, the entire ratings matrix should be accompanied by citations for references used. If this is available somewhere, can you point me to it? Best,				

3/11/2024	Barbara Hyde	I am unable to tell by the map just where the new crossing ends — is it Wilma Ave? Fritz Cove? Somewhere else?	Good morning, Barbara, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your question with the project team. The Mendenhall Peninsula alternative was modified during level 2 screening to reduce potential impacts neighborhoods. It begins at approximately milepost (MP) 8.75 of North Douglas Highway, crosses Fritz Cove to the Mendenhall Peninsula, and travels along the ridgeline for approximately four miles north before terminating at approximately MP 11 of Glacier Highway. This alternative proposes to use property owned by the City and Borough of Juneau (CBJ) to the extent possible. Please visit the website at http://www.jdnorthcrossing.com/ for the latest information on the study. Best regards, Morgan McCammon	3/13/2024	M. McCammon	

3/11/2024	Gene Randall	Thank you for the CBJ/PWFC/DOWL 2nd Crossing update today. My wife and I followed via Zoom. The presentation pages that displayed impacts of each level 2 alternatives through pie charts and alternative specific costs are quite informative. Please post those pages to the project website as soon as possible.	Good afternoon, Gene, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. We recently added the presentation shared with the CBJ Assembly Public Works & Facilities Committee to the study website Meetings Page: https://www.jdnorthcrossing.com//meetings.html . Please continue to visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	3/14/2024	M. McCammon	
3/12/2024	Bruce Baker	Hello Morgan - I have repeeatedly asked to have my name added to your second crossing email distibution list, but I see that it still is not on it. Please add my name. Additional Comment Thank you, but please also add me to this distribution list. I belong to at least two organizartions which are actively involved in addressing and rresponding to everything shared by DOWL regarding this project. Thank you.	Good morning, Bruce, You are listed on our email contact list. The last newsletter was sent in August 2023. We plan to send another newsletter prior to the final public open house, sharing the meeting details. Please visit the at http://www.jdnorthcrossing.com/ for the latest information on the study. Best regards, Morgan McCammon	3/13/2024	M. McCammon	

3/13/2024	Emily Bos	Good afternoon, We moved to 8480 N Douglas in 2020, seeking some open space and land for my husband to start building his farm, a lifelong dream of his. Shortly after moving in, we started to hear rumblings about a second bridge crossing. We have been slowing developing our dream, my husband specifically, spending hundreds of hours cultivating our land. We have been watching the developments about the second crossing closely, holding our breath about whether or not, one day the city will come in to take buy our land to make room for the bridge. The most recent article posted is the Juneau Empire sites that the Sunny point options have the highest scores. These options are the 2 that come directly to our home. As you can imaging, the decision about where the second bridge will go has immediate and direct influence on how and if we spend time further cultivating our land in the next 5-8 years. I know this project has an extended timeline, but we need to know if our house will be directly impacted if sunny point is the final location chosen. I acknowledge that the decision is a long ways out, but I assume that a detailed map of where the bridges will go already exists. I have seen mile 6 mentioned as the Douglas side terminus for both Sunny Point options. Is the 6 mile marker? Is it 5.8 miles? Do you have more specifics on this? If our house is impacted by the second bridge, when would we expect to be hearing from the city?	Good afternoon, Emily, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. Both Sunny Point alternatives begin at approximately milepost (MP) 6 of North Douglas Highway. These are two conceptual alignments in a Planning and Environmental Linkages Study process that propose to use CBJ owned lands to the extent possible. Additional details can be found on the study website, including the presentation recently shared with the CBJ Assembly Public Works & Facilities Committee: https://www.jdnorthcrossing.com//documents/UPDATED_FINAL_2024_03_07PWFC.pdf. This PEL study is expected to be complete in summer 2024. Following completion of the PEL Study Report, DOT&PF and CBJ would determine the path forward to initiate preliminary design and environmental documentation under a new contract. During this phase, more specific details would be designed and impacts to people and the environment understood. The processes needed to initiate a construction project will provide many opportunities for additional public comments. Please continue to visit the website at http://www.jdnorthcrossing.com/ for the latest information on the PEL study and continue to send any additional comments and questions to JDNorthCrossing@dowl.com. Kind regards, Morgan McCammon	4/9/2024	M. McCammon	

		Thank you for your time addressing my questions.				

3/13/2024	Julie Bednarski, North Douglas Neighborhood Association	Thank you for reaching out to follow up. Morgan it was me and a few other folks like Linda Shaw, Alex Wortheimer(sp?). We specifically wanted to meet about how the environmental rankings were scored. I believe Steve said Theresa? Would be back on Tuesday and could meet with us. Next Friday works for me. Thanks FOLLOW UP Morgan, Thank you for the invitation. As Julie mentioned in her response, she will attend this meeting in my stead (she's our alternate stakeholder representative), as she has focused her review on the environmental criteria in the scoring tables more than I have. I'll look forward to hearing the outcome of that discussion. Our committee met with the NDNA Board last evening and we do intend to file written comments on the Level II scoring tables and process prior to March 28.	Hi Julie, Thank you, we are reaching out to agencies and other organizations who expressed interest in further discussing the fieldwork reports and level 2 screening preliminary results. If next Friday also works for Mike, I can send out a calendar invitation. Morgan McCammon Project team met with NDNA 3/22/2024	3/13/2024	M. McCammon	Advisory Committee Meeting 5
3/14/2024	Winston Smith, Juneau Audubon Society	Morgan: I have invited two other JAS board members to join me in a meeting on Wednesday, March 20 at 3:00-4:00 if that still works for you. Also, I have a request: I'd like you to record the meeting so we can share with other board members. Thank you.	Morgan emailed a Teams invitation to Juneau Audubon Society board members	3/14/2024	M. McCammon	Advisory Committee Meeting 5

3/14/2024	Margaret Custer · Executive Director Southeast Alaska Land Trust	Hi Morgan, I will be out of town next week with my family. Our team would be glad to meet with you on Friday, March 29 anytime after 10, Tuesday, April 2 anytime 10:30-4, or Wednesday, April 3 10-11:30. Zoom is best for us, or we can meet with you in person in Juneau. In the meantime, I would like to request that the comment period for the Technical Advisory Committee be extended a minimum of two weeks, ideally four weeks to April 25, to allow adequate review of the large volume of materials DOWL has assembled for consideration. The fact that the PEL Study has exceeded its original timeline by more than a year should not become an emergency for the agencies who are responsible for providing input at this point. I have heard from several colleagues at state and federal agencies that this timeline is straining their capacity. In order to provide the best advice possible, we all need more time. Thank you,	Morgan emailed a Teams invitation to Margaret.	3/19/2024	M. McCammon	Advisory Committee Meeting 5

3/14/2024	Margaret Custer · Executive Director Southeast Alaska Land Trust	Hello Morgan and team, I would like to request that the Technical and Stakeholder Advisory Committees be provided at least two additional weeks to review and comment on the large volume of materials shared with us. A three-week deadline to provide meaningful feedback on hundreds of pages of detailed reports and scoring tables is just not enough. The PEL Study timeline has been extended multiple times to accommodate DOWL's needs such that we have now entered year 3 of the study, and it would be appropriate to extend it just once for the advisory committees. Can the deadline for comments from the TAC & SAC be extended until April 11 at the earliest, or ideally April 25, so that the agencies and stakeholders have adequate time to provide the advice that has been requested? Thank you,	Good afternoon, Juneau Douglas North Crossing PEL Study Advisory Committee Members, Thank you for participating in the advisory committee; we appreciate the diverse perspectives you provide. Due to several requests for additional review time, we are extending the deadline for comments on the level 2 screening preliminary impact table and scoring tables (attached) to April 11, 2024. After that, we will evaluate and incorporate necessary changes to finalize the level 2 screening and prepare the draft PEL Study Report. Thank you, Morgan McCammon	3/18/2024	M. McCammon	Advisory Committee Meeting 5
3/15/2024	Jesse Lindgren, ADF&G	Hi Greg, I am reaching out about the Juneau Douglas Second Crossing, I heard that you might have reached out to DWC asking for official comments related to the level 2 screening. I wanted to confirm what you are looking for with official comments and also please include Kate or I in regards to comments from ADF&G. Feel free to give me a call at any time. Thanks, Additional Comment Hi Morgan, Yes, Kate and I are available and will attend that	Hi Jesse, We scheduled a meeting next week with Sue Rodman and Roy Churchwell on Tuesday, March 19, 1-2 p.m. via Teams to discuss Sue's concerns shared with the study team at the Advisory Committee meeting and after. Would you and Kate have availability to join that meeting? We would like to get the department's feedback on the level 2 screening preliminary results, and this would be a good opportunity to coordinate with the divisions within the department. Let me know if this time works for you or some other times you are available. Thank you,	3/15/2024	M. McCammon	Advisory Committee Meeting 5

		meeting. Thank you,	 Additional response Morgan emailed a Teams invitation to ADF&G and met on 3/19/2024			
3/15/2024	Ron Somerville, MWSG	Morgan, thank you for responding to our expressed concerns with the present ranking of crossing alternatives with the applied criteria. Also appreciate your attempting to arrange possible meeting dates. After meeting and discussing our commitments and time constraints we have concluded we will have to wait until after we complete our review of the recent DOWL material before we can conduct an effective discussion with suggested alternatives. Because of the volume of material DOWL has released, we would support an extension of the comment period of up to 2 weeks as suggested by other organizations. I will get back to you after our review is completed to see if a meeting is possible.	Good afternoon, Juneau Douglas North Crossing PEL Study Advisory Committee Members, Thank you for participating in the advisory committee; we appreciate the diverse perspectives you provide. Due to several requests for additional review time, we are extending the deadline for comments on the level 2 screening preliminary impact table and scoring tables (attached) to April 11, 2024. After that, we will evaluate and incorporate necessary changes to finalize the level 2 screening and prepare the draft PEL Study Report. Thank you, Morgan McCammon	3/18/2024	M. McCammon	Advisory Committee Meeting 5

3/20/2024	Rebecca Bellmore Science Director, Southeast Alaska Watershed Coalition	Hi Morgan, Please see below for our initial comments on the PEL level 2 draft scoring (letter also attached). Thanks, Rebecca Bellmore See letter dated 3/20/2024	Good morning, Rebecca, Thank you for sharing your initial comments. Morgan McCammon Additional response in Level 2 Screening	3/20/2024	M. McCammon	Advisory Committee Meeting 5
3/28/2024	Sue Rodman Statewide Lands and Refuges Program Coordinator Division of Wildlife Conservation Alaska Department of Fish & Game	Hi Theresa, When will the mapping application be published? And which site will it be posted on? Many thanks,	Hi Sue, We are working through a round of internal review on the mapper currently. Barring anything unforeseen, it should be available within a week. We will be sure to send an email to all our advisory committee counterparts as soon as it is available and provide a link to the location (which is still being determined). Thanks for checking in, we are looking forward to getting this tool out to everyone! Theresa	3/28/2024	T. Dutchuk	Advisory Committee Meeting 5

4/2/2024	Margaret Custer · Executive Director Southeast Alaska Land Trust	Hi Morgan, I have been out of the office and will have to cancel or postpone today's meeting. I apologize for the late cancellation, as this was unplanned on my part. However, if there are any questions we can answer for you by email, please send those as you have them. You will still receive comments from us on the level 2 screening by April 11, but I'd be glad to answer questions on wetland functions and impact acreages ahead of time as needed. Thank you,	Hi Margaret, We understand, thank you for the advance notice. Likewise, we will continue to be available to meet with you if you have any questions for the PEL Study team. We look forward to receiving your comments on the draft level 2 screening, but we do not have any questions for you at this time. Best regards, Morgan McCammon	4/2/2024	M. McCammon	Advisory Committee Meeting 5
4/3/2024	Mike Stanley Chair, Second Crossing Committee NDNA	Dear Ms. McCammon and JD North Crossing Study Team, Attached please find the comments of the North Douglas Neighborhood Association on the PEL Level II screening results and scoring tables. If you have questions regarding these comments, or want to discuss NDNA's concerns in further detail, please advise. Thank you. See letter dated 4/3/2024	Good afternoon, Mr. Stanley, Thank you for providing comments. Morgan McCammon Additional response in Level 2 Screening	4/3/2024	M. McCammon	Advisory Committee Meeting 5

4/3/2024	Molly Zaleski - NOAA Federal	Thanks, Morgan. I just got around to looking at the mapping tool and noticed the layer prepared for EFH. After our discussion, I think it's best to note that EFH covers the entire marine area as well as wetlands and, importantly, anadromous streams. So the layers presented in this online mapping tool that show three areas of consideration for EFH is incorrect. It's helpful to note that EFH is in the study area and identified for GOA groundfish species and Pacific salmon species, but breaking it out by area at this scale leads to a false comparison of the crossing alternatives and doesn't take into consideration the EFH text descriptions that equally inform EFH areas alongside the distribution-based maps (which, again, rely on a bottom trawl survey dataset that does not survey Gastineau Channel). I hope this helps when updating the EFH layer in this public-facing mapping tool. Let me know if you have any questions. Additional comment Thanks for that clarification, Theresa. I think the crossed communication was it's good to include EFH but it needed to be amended to reflect the whole area of EFH and not the misleading fragmentation. Thanks for including EFH in the narrative, and feel free to request a review of any text from either of us over here to make sure it's being communicated well.	Hi Molly, This sounds like my mistake. I'd like to clarify that we do have notes to include prey species habitat, sub-tidal, wetlands, anadromous streams, and riparian habitat as EFH. I also have notes to review the text descriptions. I think where I may have miscommunicated is during the follow-up email when I asked if we should include our current mapping (the fragmented areas/zones) in the GIS mapper – I understood your team thought there might be utility in including the fragmented areas/zones in the public facing mapper. We will delete the EFH layer from the public facing mapper, my mistake. We are planning on deleting EFH from the Final Level 2 Screening anyhow per your recommendation, so it would make sense to remove it from the mapper. We do, however, plan on capturing your recommendations for how to discuss impacts to EFH in the narrative of the Final PEL Study. I hope that my misunderstanding about the mapper don't lead you to think that we didn't understand your overall messages. We valued you and Linda taking time to discuss the issues with us. Apologies for the confusion. Theresa	4/3/2024	T. Dutchuk	Advisory Committee Meeting 5

4/7/2024	Mary Glaves | Alaska Chapter Coordinator Backcountry Hunters & Anglers	Good evening, Please find the Alaska Chapter of BHA's comments on the Juneau Douglas North Crossing PEL study. Thank you for the opportunity to comment. All the best, See letter dated 4/7/2024 Additional Comment Good morning, Morgan, I really appreciate you getting back to me on this. Thank you,	Good morning, Mary, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	4/8/2024	M. McCammon	
4/7/2024	Ron Somerville, MWSG	Morgan, sorry for the delay but we have been pushing hard to finalize our comments before April 11. Our next meeting is April 9 when we hope to finalize ours. We have agreed that a meeting with your staff on Wednesday, Thursday or Friday would be great for us. Let us know what date is best for you. If possible, we would like a couple of hours to explore several avenues. Thanks for the contact and offer.	Morgan sent an invitation to meet with the Group. Met with MWSG on 4/10/2024	4/8/2024	M. McCammon	Advisory Committee Comment

4/10/2024	Matt Robus, MWSG	Good afternoon, Morgan, On behalf of the Mendenhall Wetlands Study Group I am transmitting our comments on the PEL Study Level 2 Screening results for the Juneau-Douglas North Crossing project. I've tried to copy members of the PEL team but would appreciate you routing it as appropriate. Thank you for the opportunity to comment. Mendenhall Wetlands Study Group See letter dated 4/10/2024	Good afternoon, Matt and Mendenhall Wetlands Study Group members, Thank you for providing comments. Additional response in Level 2 Screening Met with MWSG on 4/10/2024	4/10/2024	M. McCammon	Advisory Committee Meeting 5
4/10/2024	Catherine Pohl, MWSG	Finally, the word on nests vs hotspots. They mislabeled it as nests. And as hotspots. It is just random ebird checklists, though they are calling it ebird hotspots. They don't know what they have for data or how to use it properly. Total screw up.	Hi Catherine, Thank you for the clarification. We appreciate your attendance at today's small group meeting. Met with MWSG on 4/10/2024	4/10/2024	M. McCammon	Advisory Committee Meeting 5

4/10/2024	Catherine Pohl, MWSG	Thanks for the opportunity to meet via web. Yes, nice to have some clarification, if you can call it that. So, for the record, we have determined that your "nests" are not nests, and your ebird "Hotspots" are not eBird hotspots, at least not the community-based hotspots shown on the ebird portal. And they are also not Armstrong et al. Hotspots, just random bird observations of any number of any species arbitrarily given a 500 foot buffer. How did you determine these points to be a measure of "important bird habitat"? The points you circled indicate that birders use the area, but in themselves nothing about the numbers or types of birds. You need a more specific query of that data source to get the information you need. And for the record, I don't appreciate being stonewalled on this and other questions. I asked about this several times before because it was obvious then that you had a big problem with your bird habitat ratings and criteria. Bird habitat is the KEY VALUE of the refuge, and the refuge habitat and use is the KEY SITING CONSIDERATION. It is concerning to see the chaos, poor communication, and lack of understanding of resources, data and its appropriate use, especially after our diligent attempts to point you toward the available data sources. I should not have had to grill your team repeatedly to get a correct answer. Was your biologist (again?) instructed not to speak? Why did I have to ask so many times? And why was this question not answered before in my communications with	The study team met with the Mendenhall Wetlands Study Group on 4/10/2024 to discuss these and other questions and comments. Additional response in Level 2 Screening			Advisory Committee Meeting 5

		DOWL/DOT? Today's meeting again left the impression that the resource staff are muzzled, that information is being withheld or even manipulated. And even when they finally spoke up, their answer indicated that no one on the team understands the data or how to use it and that the various parties – GIS, biologist, NEPA specialist-- are not communicating. That is, well, astonishing. This must not be a high priority project for DOWL. If you need me to demonstrate with a shared screen, I can show your biology staff a simple way to find ebird observations on seasonal habitat use by flocks of waterfowl. Or one could just read the ebird website. hint: click on explore species, use the key species for that site (Canada Goose, Vancouver Canada Goose, Mallard), set your seasonal and overall date intervals, and bingo-- there it is. Or one could do automated queries, as apparently you had attempted (or someone did this for your group and then wasn't available to show how to use it?) In our comments, we also provide a map that shows polygons that represent survey areas from the Armstrong et al Hotspots survey, the other key data source. This shows what areas are associated with the Hotspot survey points indicated in the report. We can provide the raw data table of observation keyed to those areas, as I told your group last year. We can also provide photographs of flocks at some of these locations. For the Douglas side of the Sunny alignments, it is best to rely on bird use of similar areas of the refuge-- that is also spelled out in our comments and was recommended by Parametrix (see their report)– as that area doesn't have a lot of data.				

		For the record, DOWL did not answer the question about a whole new set of alignment drawings that were not on the shared map materials until a few days ago via your data portal. Theresa could have opened the portal and displayed the fill footprints for impervious surfaces. These show smaller fill areas at some interchanges, and pilings over the rest, and may be what you actually used for wetland impacts etc. It would have been helpful to share these earlier when we had time to use them, and to explain that these are the areas used to calculate acreages rather than leave us guessing. You apparently consider there is no wetland or other impact from miles of pilings, or even from the larger interchange areas shared earlier.				
4/11/2024	Margaret Custer · Executive Director Southeast Alaska Land Trust	Hello all, SEALT submits the attached comments on the JDNC PEL Study Level 2 Screening. Best regards, See letter dated 4/11/2024	Good afternoon, Margaret, Thank you for providing comments. Additional response in Level 2 Screening	4/11/2024	M. McCammon	Advisory Committee Meeting 5

4/11/2024	Sarah Markegard (she/her) Fish and Wildlife Biologist Southern Alaska Fish and Wildlife Field Office Alaska Region | U.S. Fish and Wildlife Service	Hello Morgan, Please see the attached US Fish and Wildlife Service comments regarding Level 2 Screening for the JDNC PEL Study. Don't hesitate to reach out if you have questions or need clarity on anything. Thank you, See letter dated 4/11/2024	Good morning, Sarah, Thank you for providing comments. Additional response in Level 2 Screening	4/12/2024	M. McCammon	Advisory Committee Meeting 5
4/11/2024	Kate Kanouse Southeast Regional Supervisor ADF&G Habitat Section - Region 1	Hi Greg, Attached are ADF&G's comments on the draft Level 2 PEL documents provided for the Juneau-Douglas Crossing project review. See letter dated 4/11/2024	Good morning, Kate, Thank you for providing comments. Additional response in Level 2 Screening	4/12/2024	M. McCammon	Advisory Committee Meeting 5

4/24/2024	Mary Glaves | Alaska Chapter Coordinator Backcountry Hunters & Anglers	Good morning, Morgan, I hope this note finds you well. I wanted to reach out and see if you're still accepting public comments on the JDNC as I see the comment button still works. I can't locate any firm timeline information at this time. Any clarifying information you have would be so appreciated. Thanks very much,	Good morning, Mary, We are accepting public comments throughout the PEL study. We expect the PEL study report to be completed this summer. I confirmed you are on the email list, so you should receive updates. Best regards, Morgan McCammon	4/24/2024	M. McCammon	
4/26/2024	Catherine Pohl, MWSG	Hello Morgan, This is a followup to the recent meeting with MWSG members. We still have not received an adequate answer regarding what the bird data points and acreages in your PEL analysis represent. At the meeting, DOWL acknowledge that they are ebird observation locations rather than nests or ebird hotspots. I have pulled all ebird observations from the ebird data portal, however, and your points are only a subset of the available ebird observations. Our long-voiced question regarding the bird data therefore remains unanswered. Specifically: --What are the bird data points? Please provide information on how bird observation points displayed in your online data portal were selected from the ebird database. You are missing points close to the alignment at the tip of Sunny Point, for example; these points represent flocks of hundreds of geese and mallards. To answer this question, you will need to forward it to whomever downloaded and queried or filtered the ebird data. There are several kinds of points, including "historic, incidental, stationery, and traveling". Which of those did you include? Were there date, seasonal, or other criteria involved in	Hi Catherine, Thank you for following up. The study team members would like to meet with you again to further discuss your questions. Please let us know if you and any Mendenhall Wetlands Study Group members who would like to attend would be available any of the following times: • Friday, May 10, 9:30 a.m. to 12:00 p.m. • Wednesday. May 15, 1:00 to 5:00 p.m. • Friday, May 17, 9:00 a.m. to 12:00 p.m. or 3:00 to 4:00 p.m. We welcome any data or shape files you would like to share. If these are too large to send over email, let me know and I can initiate a file transfer request. Thank you, Morgan McCammon	5/7/2024	M. McCammon	Advisory Committee Meeting 5

		your selection? From what I can see, you have included older incidental observations, such as that of a yellow rail that spent time there in 1970, but you omit large numbers of commonly observed species along the alignment. --In using these points, how do you account for impacts from the piling and elevated structures and the disturbed areas within and near them? Were you calculating acreages only where your "buffers" intersect with the "impervious surface" footprint, or the entire alignment? Are habitat impacts from piling and elevated structures omitted entirely from your habitat, intertidal, and wetlands analysis? If so, what is the justification for that? --Why did you put only a 500-foot buffer around points, and what will be done to correct this in the next draft? We did not get an answer regarding why you put a 500-foot buffer on the points. As ADF&G pointed out, this can be small even for nests. For most ebird (non-nest) observations, a 500 foot buffer does not make sense at all. As noted in our meeting and in the MWSG comments, the spatial accuracy of the points themselves would rarely be that precise, and the observation areas they represent in this kind of habitat are usually much larger. Those who provide and use ebird data understand that they can refer to large areas, and the location description or comment field provide additional information. An assumption of a very large area is most reasonable here, especially given the open				

		habitat used by large flocks of disturbance-sensitive species and a label such as "Mendenhall Wetlands, Sunny Point". If you are using ebird data for impact analysis, you will need to apply it to much larger areas, for example, the whole Sunny Point area out to the first island would be reasonable for most observations in that area. I am happy to provide my data pull for the Mendenhall Wetlands IBA so you can compare it to your own if that would be helpful, or you could send me yours and I will try to figure out what subset it represents if this information has been lost. Or, if you are going to use ebird data for your next draft analysis, you could repeat your data request to ebird and download the entire Juneau dataset or perhaps just the past 1 to 3 decades. You can then select only the Mendenhall Wetlands using the IBA field (with R or Excel) to reduce the file size before converting to a shapefile. As noted in 2023 correspondence, raw data is also available for the 2004 Hotspots survey by Armstrong et al. I can provide this and the associated survey area shapefiles if you would like to include these observations in your analysis as well.				

4/27/2024	Ryan Schuman	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. Construction of a second/north crossing on the Mendenhall State Game Refuge is a significant threat to conservation, hunting, and angling, and we have concerns with the PEL studies conducted. Many of the areas of the PELs including the Upland Habitat Survey Reports, Land Use Memo, Wildlife and Fish Resources, and the Environmental Setting documents all refer to 20-year-old data and contain limited new data on the area. The Upland Habitat Survey does not take in account year-round data on migration of birds or cover a longer study period that would be standard and necessary to determine impact of new development. The Land Use Memo clearly states that the use of refuge should be avoided or minimized to the maximum extent feasible including subsurface or elevated no-fill corridor options where feasible. This criterion can be met by removing the Sunny Point area locations from further feasibility studies and all other refuge locations, since Salmon Creek is a viable option that is outside of the refuge boundaries. The Origin Destination Data Memo further supports this option, showing the largest volume of vehicles are traveling to South Douglas, which is where the current bridge location is. This data does not support the need to put a second crossing within the Mendenhall wetlands. Furthermore, there is documentation that just in 2023, ADF&G added over a dozen new	Good morning, Mr. Schuman, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	4/29/2024	M. McCammon	

		anadromous fish streams to the Anadromous Waters Catalog (AWC), not captured in the May 2005 study. I urge DOWL, AKDOT and the CBJ to conduct sound scientific analysis of this proposed project that threatens critical habitat as well as hunting and fishing access for the community. This is necessary before moving forward with any decisions on location inclusions or exclusions for the next phase of project and NEPA analysis. Sincerely,				

4/27/2024	Rory O'Hanrahan	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. Construction of a second/north crossing on the Mendenhall State Game Refuge is a significant threat to conservation, hunting, and angling, and we have concerns with the PEL studies conducted. Many of the areas of the PELs including the Upland Habitat Survey Reports, Land Use Memo, Wildlife and Fish Resources, and the Environmental Setting documents all refer to 20-year-old data and contain limited new data on the area. 4/27/2024	Justin McNeill	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. Construction of a second/north crossing on the Mendenhall State Game Refuge is a significant threat to conservation, hunting, and angling, and we have concerns with the PEL studies conducted. Many of the areas of the PELs including the Upland Habitat Survey Reports, Land Use Memo, Wildlife and Fish Resources, and the Environmental Setting documents all refer to 20-year-old data and contain limited new data on the area. The Upland Habitat Survey does not take in account year-round data on migration of birds or cover a longer study period that would be standard and necessary to determine impact of new development. The Land Use Memo clearly states that the use of refuge should be avoided or minimized to the maximum extent feasible including subsurface or elevated no-fill corridor options where feasible. This criterion can be met by removing the Sunny Point area locations from further feasibility studies and all other refuge locations, since Salmon Creek is a viable option that is outside of the refuge boundaries. The Origin Destination Data Memo further supports this option, showing the largest volume of vehicles are traveling to South Douglas, which is where the current bridge location is. This data does not support the need to put a second crossing within the Mendenhall wetlands. Furthermore, there is documentation that just in 2023, ADF&G added over a dozen new	Good morning, Mr. McNeill, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	4/29/2024	M. McCammon	

		anadromous fish streams to the Anadromous Waters Catalog (AWC), not captured in the May 2005 study. I urge DOWL, AKDOT and the CBJ to conduct sound scientific analysis of this proposed project that threatens critical habitat as well as hunting and fishing access for the community. This is necessary before moving forward with any decisions on location inclusions or exclusions for the next phase of project and NEPA analysis. Sincerely,				

4/27/2024	Jeff Knisley	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. Construction of a second/north crossing on the Mendenhall State Game Refuge is a significant threat to conservation, hunting, and angling, and we have concerns with the PEL studies conducted. Many of the areas of the PELs including the Upland Habitat Survey Reports, Land Use Memo, Wildlife and Fish Resources, and the Environmental Setting documents all refer to 20-year-old data and contain limited new data on the area. 		anadromous fish streams to the Anadromous Waters Catalog (AWC), not captured in the May 2005 study. I urge DOWL, AKDOT and the CBJ to conduct sound scientific analysis of this proposed project that threatens critical habitat as well as hunting and fishing access for the community. This is necessary before moving forward with any decisions on location inclusions or exclusions for the next phase of project and NEPA analysis. Sincerely,				

5/3/2024	Nathan Peterson	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. Construction of a second/north crossing on the Mendenhall State Game Refuge is a significant threat to conservation, hunting, and angling, and we have concerns with the PEL studies conducted. Many of the areas of the PELs including the Upland Habitat Survey Reports, Land Use Memo, Wildlife and Fish Resources, and the Environmental Setting documents all refer to 20-year-old data and contain limited new data on the area. The Upland Habitat Survey does not take in account year-round data on migration of birds or cover a longer study period that would be standard and necessary to determine impact of new development. The Land Use Memo clearly states that the use of refuge should be avoided or minimized to the maximum extent feasible including subsurface or elevated no-fill corridor options where feasible. This criterion can be met by removing the Sunny Point area locations from further feasibility studies and all other refuge locations, since Salmon Creek is a viable option that is outside of the refuge boundaries. The Origin Destination Data Memo further supports this option, showing the largest volume of vehicles are traveling to South Douglas, which is where the current bridge location is. This data does not support the need to put a second crossing within the Mendenhall wetlands. Furthermore, there is documentation that just in 2023, ADF&G added over a dozen new	Good morning, Mr. Peterson, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. 5/7/2024	Catherine Pohl, MWSG	That timing is fine for me-- with a couple caveats. For efficiency and to respect our efforts to date, I ask that DOWL or DOT first answer the last round of questions in writing prior to the meeting to the extent they can, and that the biologists and GIS folk who did the bird habitat analysis are present at the meeting and allowed to speak freely (eg. answer questions the first time). Regarding the bird data-- It would be helpful for you to send me your shapefile of eBird data so we can confirm what it is, or you could provide the password to your data portal so that we can see more than the topmost record. (It seems most likely that you used the sample data file provided with the data query rather than the data file itself.) In any case, you are probably best served re-doing your own eBird queries at this point, although we can talk about next steps and how your next analysis should be shaped and guided. On the 10th, I can do a screen-share illustrating what the eBird dataset looks like for the project area if you don't yet have that, especially when queried for large flocks of key species. Regarding other data and next steps-- Agency biologists should be involved in this discussion. This may affect your scheduling. --For the habitat map that is currently in draft, you should be talking with SEALT and/or ADF&G. --For use of bird, hunter, access, and wetland data, you should be in touch with ADF&G staff. --For use of the USFWS HotSpots (and perhaps previous Caine et al data), you should be in touch with the study authors and with USFWS staff, including Michelle Kissling and Steve Lewis of	Good afternoon, Catherine, We appreciate your detailed recommendations; however, we will not be able to accommodate these requests prior to the scheduled meeting on Friday, so I will cancel the meeting. We will consider these requests as we update and finalize the level 2 screening. Many of these additional steps would be best considered during a potential future NEPA analysis and will be noted. Another comment period and a public open house will occur this summer for the draft PEL study report. Additional response in Level 2 Screening	5/8/2024	M. McCammon	Advisory Committee Meeting 5

		Juneau. I can provide what I have along with shapefiles that roughly indicate surveyed areas but would want to be assured that there is a plan for appropriate and meaningful use of the data. --The AK Shorebird Working Group, Boreal Partners In Flight, and the USFWS Anchorage Migratory Bird Management and Ecological Services may also be able to offer input or review regarding meaningful and acceptable uses of these and other data. Given all of this, you may be best guided in your next steps by a panel that includes current agency biologists and resource managers as well as others with the needed expertise. You will also need to have staff with enough wildlife background to appropriately interpret and use habitat and species data in context of its importance to the community and to the state and federal minimization and avoidance requirements regarding refuges and wetlands. In the meantime, I look forward to your response to our questions below. Best,				
5/7/2024	Catherine Pohl, MWSG	On my computer it is saying 5:30 pm.... Please note caveats in my response--- It is essential that DOWL/DOT answers our questions in writing before the meeting to the extent you can and that the biologists and GIS folk are there and free to speak. My attendance is conditional on DOWL/DOT doing its part; we have done ours. Also-- can we share screens? Will you send over your eBird data file? Can you share the data portal password for more complete viewing?	Meeting canceled Additional response in Level 2 Screening	5/8/2024	M. McCammon	Advisory Committee Meeting 5

5/7/2024	John Plett	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. 5/7/2024	Catherine Pohl, MWSG	Hello Morgan, I asked the following questions: --What are the bird data points? --In using these points, how do you account for impacts from the piling and elevated structures and the disturbed areas within and near them? --Why did you put only a 500-foot buffer around points, and what will be done to correct this in the next draft? Perhaps you can reschedule the meeting for one of the other times you suggested if these 3 questions can't be answered prior to Friday. You will need to answer these during the PEL study in any case; there is no possible justification for waiting for NEPA to provide these simple answers. Or, if DOWL staff can and will answer these at the meeting to the extent you can, instead of prior, I will attend and you may schedule for Friday as planned. I can screen-share bird data files, and we can talk about how the pertinent files may be obtained or shared and conditions for same. It has become clear that you need to correct your analysis in order to proceed-- a simple re-labeling of the data will not suffice. You are using an incomplete and therefore still mislabeled dataset, perhaps only the first few hundred records of eBird for the area, representing a smattering of incidental historical records.	Good afternoon, Catherine, Ron, and Matt, Please continue to direct comments and questions to DOWL and DOT&PF, as this is the study leadership team responsible for all work products. We will not be able to provide written answers to advisory committee member comments and questions at this time as we are working through all comments received in the latest advisory committee comment period on level 2 screening preliminary results. We will coordinate meeting schedules with the environmental study team members and will reach out with some new times in the next month when we are able to adequately answer your questions prior to level 2 screening being finalized. Thank you, Additional response in Level 2 Screening	5/9/2024	M. McCammon	Advisory Committee Meeting 5

		You are asking me for data files and to discuss these questions with you; it is reasonable for me to ask for answers to the extent that you have them, as well as discussion. That is simple good faith. You will remember that at our last meeting, I had to ask many times in order to get a correct answer to a very simple question. It is reasonable for me to ask that those who can answer these questions are present and allowed to speak in a timely fashion. Let's all meet on Friday and clear some of the haze surrounding your bird habitat analysis. Best, Additional Response Thanks Morgan . We will regroup and get our heads together to decide on the next points of contact with DOWL. Ron				

5/9/2024	Sue Rodman Statewide Lands and Refuges Program Coordinator Division of Wildlife Conservation Alaska Department of Fish & Game		I received a call this morning from Sue Rodman with ADF&G. She was calling on behalf of the Mendenhall Wetlands Study Group. She suggested meeting with this group tomorrow or another time before the level 2 screening was finalized. She also wanted to go on record as saying she thought the alternatives under consideration now have been narrowed as much as possible and should all go through to a future NEPA process. I told her the study team has not finished level 2 screening and we had not yet determined the alternatives that would be recommended to move forward. She said she would also reach out to Greg.	5/9/2024	M. McCammon	Advisory Committee Meeting 5
5/9/2024	Catherine Pohl, MWSG	To Parametrix: I have a few questions about the bird impact analysis for the Juneau Douglas (AK) North Crossing PEL. I see that your firm did some technical reports for them and may have contributed data, a subset of which they may have later used for their draft rating. I am informally helping DOWL via a technical advisory group. You can reach me at [redacted].	Parametrix requested not to respond, DOWL would respond			

5/9/2024	Sue Rodman Statewide Lands and Refuges Program Coordinator Division of Wildlife Conservation Alaska Department of Fish & Game	Hi Christy, My intent is to ease some of the concerns of our stakeholders to the Mendenhall Wetlands State Game Refuge and the wetlands in general. We are aware that the requested meeting with the Mendenhall Wetlands Study Group and Dowl was cancelled for tomorrow because of the detailed questions Dowl was not ready to respond to. I had a conversation with Morgan McCammon. She acknowledged that Dowl is not in a position to commit to retaining all crossing options at this time. We discussed the request to retain all crossing options currently on the table for the NEPA process where a robust and scientifically valid assessment can be conducted, since the data and analysis conducted for the PEL study's Level II Screening was insufficient biologically. Regarding the cancellation of tomorrow's meeting, she suggested that Dowl meets with MWSG once they have a chance to review and provide responses to the questions presented. They are revising their Level II Screening study to accommodate comments received (the letters we all sent by April 11). I'm hoping that Dowl will still meet with MWSG soon so that these concerns can be aired. These dedicated scientists have a strong educated and experienced group that is important for conservation efforts. It seems that closer engagement with stakeholders provides a more positive process and outcome. It appears that this JNDC PEL does not do that to the extent that DOT is providing this outreach and engagement for the Safer Seward Highway project in Anchorage through HDR. Process is such a key element of any	Hi Sue, Thank you for reaching out. We will meet with the group before the level 2 screening is finalized but it will need to be postponed in order for the project team to be able to answer all of their questions. It's taking time to work through all the comments received in response to the level 2 screening and we want to make sure we can adequately address them when meeting. We don't have an estimated date to meet with them yet but I expect our team will be able to do reschedule in the next month or so. Thank you again! Christy Gentemann Regional Environmental Manager, Southcoast Region Alaska Department of Transportation & Public Facilities Additional response in Level 2 Screening	5/9/2024	C. Gentemann	Advisory Committee Meeting 5

		big project; we as government continue to re-learn this lesson when we don't allow for the needed communication. Thank you for your consideration and keeping us in the loop on where we can support the process with our stakeholders; they are a critical component to maintaining the refuge system statewide and Mendenhall Wetlands play an important role in the Juneau area for wildlife, ecology, and the people. Thank you,				

6/11/2024	Dominick Phillips	Hello, I am contacting you all to please look into the potential negative impacts to the Mendenhall wetlands before deciding a second bridge location. The Mendenhall wetlands is a crucial habitat for salmon and migratory birds. A change or decrease in habitat could alter migratory birds flight paths, or prevent them from stopping and increase in mortality. Bridges and impoundments over shallow bodies of water have also been known to have negative impacts on salmon returns. A second bridge may decrease public access to local hunters and fishers. With the rights and public access of hunters and fishing people always being infringed an increase in that is not a good thing. I am not against a second bridge just against a decrease in Americas dwindling wetland habitat. Please let me know if you have any questions or if i could assist in this area of study in any way. I do have a degree in Watershed Management and have a diverse scientific background and may be able to help. Thank you,	Good morning, Mr. Phillips, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	6/13/2024	M. McCammon	

6/14/2024	Wendy Hogins	This is a repeat comment from several months ago. There is no information on the project web site that supports the p&n statement “analyses indicate that the intersections operate at or near capacity during peak travel times”. Presuming level of service is a reasonable measure of intersection performance, what is the level of service for the intersections existing condition, no build, and the various alternatives? In any case,there is no information demonstrating the project addresses an existing vehicle transportation deficiency. Further, to aid a reader to better understand scale of the problem-what constitutes “peak travel times” in terms of time of day and duration of occurrence. Traffic volume data(hourly?) should be provided as support	Good afternoon, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments and questions with the project team and will send responses soon. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Additional Response Hi Wendy, According to the Bridge Volume to Capacity of the Existing Juneau-Douglas Bridge Memo, found at https://www.jdnorthcrossing.com/documents.html, the Egan Drive/10th Street intersection "operates at a level of service (LOS) D during both the morning and evening peak hours" under existing conditions. Similarly, the Douglas Highway/Juneau-Douglas Bridge roundabout "operates at LOS E during the AM peak and LOS D or better during the PM peak" under existing conditions. By 2050, both intersections are expected to deteriorate in the AM peak hour to LOS E and LOS F, respectively. The Juneau-Douglas Bridge from a planning level Q/LOS analysis operates under capacity (LOS D) today. However, by 2050 (assuming a minimal 0.25%/year growth rate) "the bridge will operate at or near capacity" (worse than LOS E). The LOS is a letter grade that estimates the amount of time a person could spend waiting at the intersections or traveling across the Juneau-Douglas Bridge. DOT&PF policy is to maintain a LOS of D or better. If you have any further questions, please feel free	6/25/2024	M. McCammon	

			to reach out. Thank you, Morgan McCammon			

6/18/2024	Matt Robus, MWSG	Good Morning Morgan- Please forward as appropriate to Juneau North Crossing PEL team members. Thanks - Matt Robus Dear Juneau North Crossing PEL team: The Mendenhall Wetlands Study Group (MWSG) consists of more than 20 Juneau wetlands specialists, former state and federal fish and wildlife employees, habitat professionals, and local conservation organization leaders. The MWSG was formed when it became apparent that a new effort to plan a crossing between mainland Juneau and Douglas Island was imminent, and has been a participant as an advisory group member since the inception of the PEL process. As you know, the MWSG strongly believes a scientifically accurate analysis of wetland resources and uses is essential to providing a credible comparison of the alternative crossing locations and designs in terms of their impacts to the resources and to the integrity of the Mendenhall Wetlands State Game Refuge, and is paramount for making wise choices for North Crossing routes. This letter is to transmit our summary (attached) of our meeting on May 23, 2024 at which we discussed many of the concerns expressed by the MWSG in our comments on the preliminary Level 2 screening presented to the PEL advisory groups. Our purpose in creating this summary is to document what we learned at the meeting, and also issues which weren't addressed, and/or which will require more work. Thank you again for meeting with us. Please contact Ron Somerville (somerville@gci.net) if you have questions or disagreement with the attached	Good morning, Matt, Thank you for sharing your comments and meeting summary. I am sharing these with the rest of the team. Additional response in Level 2 Screening	6/18/2024	M. McCammon	Advisory Committee Meeting 5

		meeting summary. On behalf of the MWSG, See letter dated 6/18/2024				

6/20/2024	Rance Brooks | Project Manager, Goldbelt	Morgan, My last day with Goldbelt, Inc is this Friday (6/21/2024). Moving forward, Goldbelt requests that my colleague, Skiba (copied on this email), be included in the advisory committee meetings and any associated meetings. Thank You,	Good morning, Rance. Thank you for sharing this information. We wish you the best in your future endeavors. Hi Skiba. I will update the Stakeholder Advisory Committee list with your contact information. Please let me know if you have any questions regarding progress of the PEL study. The website has documents on the tasks completed so far: https://www.jdnorthcrossing.com/. Thank you, Morgan McCammon	6/20/2024	M. McCammon	Advisory Committee Comment

7/10/2024	Norman Hoppas	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. Construction of a second/north crossing on the Mendenhall State Game Refuge is a significant threat to conservation, hunting, and angling, and we have concerns with the PEL studies conducted. Many of the areas of the PELs including the Upland Habitat Survey Reports, Land Use Memo, Wildlife and Fish Resources, and the Environmental Setting documents all refer to 20-year-old data and contain limited new data on the area. The Upland Habitat Survey does not take in account year-round data on migration of birds or cover a longer study period that would be standard and necessary to determine impact of new development. The Land Use Memo clearly states that the use of refuge should be avoided or minimized to the maximum extent feasible including subsurface or elevated no-fill corridor options where feasible. This criterion can be met by removing the Sunny Point area locations from further feasibility studies and all other refuge locations, since Salmon Creek is a viable option that is outside of the refuge boundaries. The Origin Destination Data Memo further supports this option, showing the largest volume of vehicles are traveling to South Douglas, which is where the current bridge location is. This data does not support the need to put a second crossing within the Mendenhall wetlands. Furthermore, there is documentation that just in 2023, ADF&G added over a dozen new	Good morning, Mr. Hoppas, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	7/11/2024	M. McCammon	

		anadromous fish streams to the Anadromous Waters Catalog (AWC), not captured in the May 2005 study. I urge DOWL, AKDOT and the CBJ to conduct sound scientific analysis of this proposed project that threatens critical habitat as well as hunting and fishing access for the community. This is necessary before moving forward with any decisions on location inclusions or exclusions for the next phase of project and NEPA analysis. Sincerely,				

7/16/2024	Emily Bos	Good afternoon, We moved to 8480 N Douglas in 2020, seeking some open space and land for my husband to start building his farm, a lifelong dream of his. Shortly after moving in, we started to hear rumblings about a second bridge crossing. We have been slowing developing our dream, my husband specifically, spending hundreds of hours cultivating our land. We have been watching the developments about the second crossing closely, holding our breath about whether or not, one day the city will come in to take back our land to make room for the bridge. The most recent article posted is the Juneau Empire sites that the Sunny point options have the highest scores. These options are the 2 that come directly to our home. As you can imaging, the decision about where the second bridge will go has immediate and direct influence on how and if we spend time further cultivating our land in the next 5-8 years. I know this project has an extended timeline, but we need to know if our house will be directly impacted if sunny point is the final location chosen. I acknowledge that the decision is a long ways out, but I assume that a detailed map of where the bridges will go already exists. I have seen mile 6 mentioned as the Douglas side terminus for both Sunny Point options. Is the 6 mile marker? Is it 5.8 miles? Do you have more specifics on this? If our house is impacted by the second bridge, when would we expect to be hearing from the city?	Good afternoon, Emily, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team. The study team is still reassessing the alternative screening in response to agency comments and additional coordination is needed before the draft screening and scoring will be available for public review. The draft PEL study and screening results are expected to be complete in September or October 2024. At that time, we will make these documents available for public review and comment. The PEL study will not identify specific properties as being impacted since no single alternative will be selected during this study. Each alternative has different potential property impacts that will be evaluated in a future environmental documentation effort in accordance with National Environmental Policy Act. These processes will provide many opportunities for additional public comments. The environmental documentation phase is planned to begin in late 2024 or 2025 and will likely take 2-3 years to complete. Please continue to visit the website at http://www.jdnorthcrossing.com/ for the latest information on the PEL study and continue to send any additional comments and questions to JDNorthCrossing@dowl.com. Best regards, Morgan McCammon	7/17/2024	M. McCammon	

		Thank you for your time addressing my questions.				

7/21/2024	Curtis Branson	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. Construction of a second/north crossing on the Mendenhall State Game Refuge is a significant threat to conservation, hunting, and angling, and we have concerns with the PEL studies conducted. 		anadromous fish streams to the Anadromous Waters Catalog (AWC), not captured in the May 2005 study. I urge DOWL, AKDOT and the CBJ to conduct sound scientific analysis of this proposed project that threatens critical habitat as well as hunting and fishing access for the community. This is necessary before moving forward with any decisions on location inclusions or exclusions for the next phase of project and NEPA analysis. Sincerely,				

8/1/2024	Ron Somerville, MWSG	Morgan, the Mendenhall Wetlands study group is trying to set up its schedule this summer and early fall for a variety of purposes. Some have to do with family schedules and personal schedules like vacation plans, fishing and/or hunting trips, etc. We have been waiting for DOWL's next release of potential final channel crossing options (I assume is Tier 3). As this process appears to be way behind in its scheduled releases, can you give us the new target date for the next release? I appreciate your help here. Many Thanks	Ron Somerville called me to ask for an update as they are meeting today. I shared that the DOT&PF is consulting with the SEO and AG, and that we do not yet have dates for the release of the final PEL report. He requested the comment period for this report be extended to 45-60 days, rather than 30 days, because they do not think that is enough time for them to review and provide comments without knowing ahead of time the exact timeline. He also shared the MWSG was providing the documents they shared with the PEL study team with others who requested those. Morgan McCammon	8/1/2024	M. McCammon	Advisory Committee Comment

8/23/2024	Ron Somerville, MWSG	Hi: This is a short email to advise that a Second Channel Crossing PUBLIC FORUM is scheduled for September 23rd, 2024 in Juneau at the Elizabeth Peratrovich Hall starting at 6:00 PM. This forum is being sponsored by the Territorial Sportsmen (TSI) and organized by the Mendenhall Wetlands Study Group (MWSG). The membership of TSI has complained about the lack of information being released to the public on the potential location and structure of the crossing. The MWSG was created to participate fully in the review and selection process. The purpose of the Forum is to inform the public on the study and review process and provide a chance for the public to ask questions of the organizations and agencies involved. We have provided space for the major players in this process to explain their involvement, reviews and justifications. Please review this proposed schedule and advise me of any proposed changes. We welcome your participation and thank you for your consideration of this public forum in your schedule. Letting us know who will be representing you or your organization would be appreciated. We will provide space for handouts and other public information distribution. We also encourage the use of slides in your presentations as computer access will be available. We will be distributing fliers and a final outline when it is available. Thank You	See response 9/5/2024			Advisory Committee Comment

8/30/2024	Ron Somerville, MWSG	Morgan, I am checking to see who might be assigned to participate in the Public Forum scheduled for September 23rd here in Juneau. I would like to include the names in our fliers and ads. So far we have received enthusiastic responses and public support. As of this time we are anticipating 150 to 200 attendees. I am attaching, again, a copy of our rough draft of the public forum schedule. Thanks	See response 9/5/2024			Advisory Committee Comment
9/3/2024	Ron Somerville, MWSG	Thanks for the letter Morgan. By the way would you please acknowledge you received our request for DOWL to participate in our public forum on Sept. 23rd. here in Juneau? Would like to know who would be representing DOWL.	Good morning, Ron, Thank you for the invitation. We will respond when the Department of Transportation & Public Facilities Project Manager returns from leave. Morgan McCammon	9/5/2024	M. McCammon	Advisory Committee Comment

9/12/2024	Ron Somerville, MWSG	Morgan, I am not trying to be a pest but we need to know if DOWL is going to be sending someone to make your presentation at the Public Forum scheduled for the 23rd this month. I need the name and email address to make sure all event schedules and hall requirements are met. Any screen requirements will have a tight schedule as well . If you are not going to participate, we will have someone summarize your process and documents as best we can. Letting us know your intentions would be helpful in making sure that the public is adequately informed on this important matter. ADDITIONAL RESPONSE Thanks for the notice Morgan. I find it somewhat interesting that DOWL refuses to participate in a widely advertised public meeting just because it was sponsored and paid for by a public organization. Our letter inviting the Governor will highlight the refusal to attend a public meeting potentially attracting over 100 Juneau residents to discuss the details affecting the selection of a project potentially costing near $400 Million - $500 Million with significant impacts on all Juneau residents and many statewide taxpayers looking for limited Highway funds for statewide projects. In addition, DOWL and DOTPF have staff in Juneau that could conveniently attend this forum. We have given DOWL and ADOTPF the opportunity to participate in the design of this meeting with a long planning period. Yes, some controversial issues will most certainly be raised. It seems beneficial, however, to discuss these issues now before the final Level 3 decisions are made and we enter NEPA requirements.	Good afternoon, Ron, Thank you for your patience and the invitation to the September 23 public forum. The Department of Transportation and Public Facilities has elected not to participate in this forum at this time. We will host a joint advisory committee meeting in the months to come where we will provide more updates. We will inform the advisory committees of the date as soon as it is scheduled. Best regards, Morgan McCammon	9/12/2024	M. McCammon	Advisory Committee Comment

		Again, I appreciate your responding to my reminder. Ron Somerville				
9/18/2024	Anna Kenny	Hello, my name is Anna Kenny. I'm a reporter with KTOLO. We're a radio station in Juneau and I'm working on a story about our proposed second crossing project which that was involved in. I believe Steve Noble is the project manager. I have a few questions about that study and was hoping to set up an so I got transferred to this number. I don't know if you can help with that, but if you can put me in touch with Greg or someone on that project	DOT&PF to respond	9/19/2024	G. Lockwood	

		team who can speak to me, then you can reach me back at [redacted]. Thanks so much.				
9/20/2024	Tasha Waters	Maybe there should be more crosswalks on Douglas Island.	Good morning, Tasha, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	9/23/2024	M. McCammon	
9/21/2024	Steve Behnke	Could you please point me to any materials that discuss the carbon emissions impacts, including embedded carbon, of the 2nd crossing alternatives. Thanks,	Good day, Steve, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. At this point in the study, specific carbon emissions impacts are not identified. These will be thoroughly evaluated during a future National Environmental Policy Act, or NEPA, process. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards, Morgan McCammon	9/26/2024	M. McCammon	

9/23/2024	Emily Bos	Are you able to answer the specific question of when a final determination will be made and when will residents be notified that they will be impacted? All of the PEL maps shows that my house will be affected if either sunny point option is selected. Thanks	Good day, Emily, We understand you are concerned about your home, and we are working to maintain current information on the project website to keep the public apprised of the project progress. The PEL study is not anticipated to identify a single alternative. The range of alternatives moving forward out of this PEL study may include the East and West Sunny Point alternatives as well as 2-3 others. The footprint of proposed alternatives is not well defined and is subject to modifications based on public input, engineering modifications, and avoidance of environmental impacts. Alternatives that are recommended for further study will be studied at a much greater level of detail as part of the future environmental documentation effort in accordance with National Environmental Policy Act, or NEPA. Only then will a single preferred alternative be selected, and the level of detail be sufficient to identify impacts to specific properties. Your comments and concerns shared during this PEL study will be taken into consideration as we finish up the PEL Study. An open house will be held with an opportunity to comment on the alternatives at the Draft PEL Study completion stage. Currently, we anticipate that open house to be sometime this winter. Please continue to visit the website at http://www.jdnorthcrossing.com/ for the latest information on the PEL study and continue to send any additional comments and questions to JDNorthCrossing@dowl.com. Thank you, Morgan McCammon	9/26/2024	M. McCammon	

9/24/2024	Ethan Bell	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. Construction of a second/north crossing on the Mendenhall State Game Refuge is a significant threat to conservation, hunting, and angling, and we have concerns with the PEL studies conducted. Many of the areas of the PELs including the Upland Habitat Survey Reports, Land Use Memo, Wildlife and Fish Resources, and the Environmental Setting documents all refer to 20-year-old data and contain limited new data on the area. The Upland Habitat Survey does not take in account year-round data on migration of birds or cover a longer study period that would be standard and necessary to determine impact of new development. The Land Use Memo clearly states that the use of refuge should be avoided or minimized to the maximum extent feasible including subsurface or elevated no-fill corridor options where feasible. This criterion can be met by removing the Sunny Point area locations from further feasibility studies and all other refuge locations, since Salmon Creek is a viable option that is outside of the refuge boundaries. The Origin Destination Data Memo further supports this option, showing the largest volume of vehicles are traveling to South Douglas, which is where the current bridge location is. This data does not support the need to put a second crossing within the Mendenhall wetlands. Furthermore, there is documentation that just in 2023, ADF&G added over a dozen new	Good morning, Mr. Bell, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. The Origin Destination Data Memo further supports this option, showing the largest volume of vehicles are traveling to South Douglas, which is where the current bridge location is. This data does not support the need to put a second crossing within the Mendenhall wetlands. Furthermore, there is documentation that just in 2023, ADF&G added over a dozen new anadromous fish streams to the Anadromous Waters Catalog (AWC), not captured in the May 2005 study. I urge DOWL, AKDOT and the CBJ to conduct sound scientific analysis of this proposed project that threatens critical habitat as well as hunting and fishing access for the community. This is necessary before moving forward with any decisions on location inclusions or exclusions for the next phase of project and NEPA analysis. Sincerely,				

10/21/2024	Bob Saviers	Never received any response to my comments. Why is the north channel crossing even here? It's tied to a native corporation's well being for profit and cbj housing relief under a federal purpose and need? You're kidding? If it's at salmon creek or Vanderbilt then it's reasonable to tie two nhs highways together as a state project. Signed Ex dot employee.	Good afternoon, Mr. Saviers, Thank you for sharing your comments on the Juneau Douglas North Crossing PEL Study. The City and Borough of Juneau has partnered with DOT&PF to study a possible transportation corridor to connect Juneau with the north end of Douglas Island using a Planning and Environmental Linkages (PEL) Study. This process provides opportunities for public input and involvement, and the analyses conducted may be incorporated into a future National Environmental Policy Act (NEPA) process. The study team expects to recommend the alternatives moving forward in the PEL study report in winter/spring 2025. We will publicly notice the date for the final public meeting when it is scheduled. Best regards, Morgan McCammon	11/5/2024	M. McCammon	
11/5/2024	Michael Williamson| Project Manager | Goldbelt	Hi Morgan, Can you please add me to the north crossing distribution list? Thanks!	Good morning, Michael, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I added you to the study update list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. Kind regards,	11/5/2024	M. McCammon	

12/10/2024	Nicholas Berling	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. 1/19/2025	Catherine Pohl	Greetings, PEL team: At Zoom meetings with DOWL and DOT staff last spring, I asked questions regarding the PEL level 2 bird habitat impact maps and ratings. I asked what subset of eBird observation data was used for your assessment of impact acreage and related maps and ratings, how this subset was selected, and your rationale for this and for the use of a 500 ft buffer as an indicator of impact. Your project staff did not answer any of these questions. They said that they did not know the answers or "could not" answer, saying only that a GIS person not present may have been involved. A biologist or other analyst with knowledge of the method, its rationale, or data source was never identified or included in the various conversations. The questions were never answered in subsequent communications. You had stated in the spring at the last such conversation that the bird habitat analysis was being re-worked with a new approach and was under internal review. Nine months have passed without further update on this. Your inexplicably odd and erroneous bird habitat portrayal, as still presented to the public in your online GIS and referenced in your Sept. 2024 "update," remains very misleading and entirely unsupportable. --When will the expected revised habitat analysis and impact ratings be presented to stakeholders or the public for review? --If you have abandoned the previous bird habitat analysis in favor of a correction or another approach, why is the misleading map still being presented to the public? --Has your "new" approach received any preliminary agency or stakeholder review, or will it?	Good afternoon, Catherine, Thank you for your continued interest in the Juneau Douglas North Crossing PEL Study. In response to the Technical and Stakeholder Advisory Committee members' feedback and conversations with you and other members of the Mendenhall Wetlands Study Group, we revised the approach to the bird habitat analysis. This revision was verified as appropriate by the Department of Transportation and Public Facilities Statewide Environmental Office. The updated criteria include the entire Mendenhall Wetland State Game Refuge as important bird habitat. In response to your questions below, we offer the following responses: --When will the expected revised habitat analysis and impact ratings be presented to stakeholders or the public for review? The revised analysis will be shared at the upcoming advisory committee meeting on March 4 and then again at the public meeting later this spring. --If you have abandoned the previous bird habitat analysis in favor of a correction or another approach, why is the misleading map still being presented to the public? We are updating the webmapper to show the revised approach for scoring impacts to bird habitat, the revised method includes using the entire MWSGR as important bird habitat and no longer relies on the hotspots. --Has your "new" approach received any preliminary agency or stakeholder review, or will it?	2/3/2025	M. McCammon	

		I am familiar with the available bird and habitat data for this area and am happy to review your alternative analysis when it is available, either as an individual or through an advisory/stakeholder group. ADDITIONAL RESPONSE 'Thanks for your response, Morgan. Perhaps at this point we could stop referring to your GIS map bird points as "hotspots"... As was shown last spring, the eBird points on your GIS map are not a set of "eBird community birding hotspots", a complete set of eBird checklists posted to points in the project area, or actual hotspots of bird use identified in a 2003 study. Your online GIS map now labels your set of mystery points as eBird observations (not hotspots) but still fails to show a complete or credible set of such points, including the repeated observations of large flocks right along the alignments. The PEL process is designed to allow early incorporation of information, including environmental and other constraints and vulnerabilities, and recommendations from the pertinent stakeholder agencies and organizations. It would therefore be appropriate to run your new approach by stewarding agencies and organizations-- ADF&G, USFWS, ACOE, SEALT, and AK Audubon at a minimum-- before committing to it in your analysis. (While your statewide environmental office has expertise with permitting and compliance, its expertise with bird habitat assessment may be expected to be limited in comparison to that of ADF&G, USFWS, and other stakeholders. And clearly, you will not be able to differentiate alternatives meaningfully with one blanket level or type of habitat importance applied	The revised approach was recommended by the Statewide Environmental Office and as mentioned above will be discussed at the March 4 meeting. Additional field studies and analysis will take place by a selected contractor in a future environmental document phase prior to future design of a potential north crossing. Best regards,			

		across your entire project area.) You have said, however, that after meeting with advisory groups in March you will present the same information to the public, revealing that you are not planning on actually using responses from the advisory groups (or stewarding agencies) to revise your approach or ratings and again demonstrating that this PEL is a mock process rather than one that effectively uses the expertise it solicits.				

1/22/2025	Jess Krahn	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. 2/11/2025	Travis Thompson	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish. Construction of a second/north crossing on the Mendenhall State Game Refuge is a significant threat to conservation, hunting, and angling, and we have concerns with the PEL studies conducted. Many of the areas of the PELs including the Upland Habitat Survey Reports, Land Use Memo, Wildlife and Fish Resources, and the Environmental Setting documents all refer to 20-year-old data and contain limited new data on the area. The Upland Habitat Survey does not take in account year-round data on migration of birds or cover a longer study period that would be standard and necessary to determine impact of new development. The Land Use Memo clearly states that the use of refuge should be avoided or minimized to the maximum extent feasible including subsurface or elevated no-fill corridor options where feasible. This criterion can be met by removing the Sunny Point area locations from further feasibility studies and all other refuge locations, since Salmon Creek is a viable option that is outside of the refuge boundaries. The Origin Destination Data Memo further supports this option, showing the largest volume of vehicles are traveling to South Douglas, which is where the current bridge location is. This data does not support the need to put a second crossing within the Mendenhall wetlands. Furthermore, there is documentation that just in 2023, ADF&G added over a dozen new	Good morning, Mr. Thompson, Thank you for your interest in the Juneau Douglas North Crossing PEL Study. I have shared your comments with the project team and added you to the study update list. Please visit the website at www.JDNorthCrossing.com for the latest information on the study. 3/18/2025	Catherine Pohl	Dear PEL team: I am writing as followup to the message below. Where is your new impact quantification and scoring scheme? How can the advisory groups comment on it without seeing it? We have only the overall scores, not the "revised analysis" promised in the message below. The advisory groups I am assisting have only a few days to prepare comments, so please provide this. For example, I do not see the re-scoring of bird or wetland habitat in the March 4 meeting minutes, other than that scores were weighted for areas within the refuge. What, exactly, does this mean? Bird habitat is scored for area affected within the refuge and then additionally weighted for being in the refuge? Is this also true for wetlands and intertidal habitat? Habitat outside the refuge is ignored, despite having protections under state and/or federal law? Oddly, the project proponents appear to be ignoring the overall scores in their decision-making, choosing to promote in advance of NEPA the selection of corridors within the refuge, including, and perhaps focusing on, those with the lowest scores. Thus the lengthy and expensive PEL project undertaken over several years with public funds has failed to screen alternatives by its own criteria or to contribute meaningfully to streamlining the subsequent NEPA review. Your assertion that there were "no outliers" to guide removal of alternatives does not make sense. Your definition and reliance on "outliers" is questionable. Some alternatives were clearly a	Hello, Catherine, Thank you for your continued engagement and extensive comments on this study. Please see the responses to your questions and comments: Where is your new impact quantification and scoring scheme? We have recently posted the Level 2 Screening Memorandum to the project website. It can be found here: https://www.jdnorthcrossing.com/documents/JDNC_L2_Screening_Summary_Memo_2.14.25.pdf or on the documents page: https://www.jdnorthcrossing.com/documents.html. I do not see the re-scoring of bird or wetland habitat in the March 4 meeting minutes, other than that scores were weighted for areas within the refuge. What, exactly, does this mean? Bird habitat is scored for area affected within the refuge and then additionally weighted for being in the refuge? Is this also true for wetlands and intertidal habitat? Habitat outside the refuge is ignored, despite having protections under state and/or federal law? The Advisory Committees and the DOT&PF's Statewide Environmental Office (SEO) provided feedback and recommendations on the draft Level 2 analysis. The most robust feedback sought increased focus on the importance of the Mendenhall Wetlands State Game Refuge (MWSGR) and the resources located within the Refuge (e.g., wetlands, bird habitat, intertidal habitat, etc.). Resources falling within the MWSGR were given greater weight as sought by Advisory Committee members and recommended by the	3/24/2025	M. McCammon	Advisory Committee Comment

		good deal worst overall. The ranking you have provided makes this clear, particularly for the very key habitat- and community-use related areas at the heart of the refuge. Extreme "outliers" may not be expected in any case given your very narrow range for scoring individual items (0 to -2 in many cases, if done similarly to your previous iteration). By any reasonable measure, your scoring indicates that the E&W Sunny and Vanderbilt alternatives should be removed from further consideration. The CBJ's recent letter to ADF&G does not make sense. Its timing is out of line with the sequence of both state and federal project review, and its logic is inconsistent with the facts as well as the ongoing application of T16 authority. Refuge management plans are adopted by reference under T16 authority. The refuge's plan identifies criteria for use of a transportation corridor. Such criteria are consistent with both T16 and the AK Constitution and slightly more specific; the criteria require use of a viable off-refuge alternative if one exists to meet the need, and in any case avoidance and minimization of impacts to habitat and use is required. These are similar to the applicable 4f requirements as well. The management plan transportation corridor criteria are not mere "guidance" but are the consistent criteria by which ADF&G must by law review a proposed transportation corridor. That was true when I reviewed and wrote permits for ADF&G and, as I understand it, is still the case. For the long run, the protection of refuge lands is a benefit to the community and state. Those who framed the constitution, wrote the Title 16 statutes into law, and established the refuge and refuge management plan under T16 authority understood	SEO. Resources outside the MWSGR continue to be considered. Your assertion that there were "no outliers" to guide removal of alternatives does not make sense. Your definition and reliance on "outliers" is questionable. All build alternatives reviewed under Level 2 Screening meet the Purpose & Need and have varying levels of constraints and impacts. The Level 2 Screening did not identify substantial impacts or constraints that were sufficiently outlying from the other alternatives to justify dismissal of any of the alternatives, except for the Mendenhall Peninsula Alternative which has been eliminated as it is not financially feasible. The remaining five build alternatives are recommended for a potential future NEPA analysis, in addition to the no build alternative. Regarding your concerns with the CBJ letter and the analysis on 1990 Mendenhall Wetlands State Game Refuge Management Plan, we have noted your concerns and will include these in the comment log in the Final PEL Study. Best regards,			

		this and provided for the reasonable protection of refuges.				

4/4/2025	Trevor Sikes	Dear Mr. : The Mendenhall wetlands are a treasured public hunting and angling destination and an important resource for a vast number of species including migratory birds and anadromous fish.
